REPORT ON THE METEOROLOGY OF CEYLON FOR 1901.

THE work of the Meteorological Branch of the Survey Department was carried on with as great efficiency as the instruments at our disposal will allow, by the Acting Superintendent, Mr. W. C. S. Ingles, whose report I attach, together with the usual tables and explanatory notes. This Branch of the service has never risen to the importance that it deserves in view of the position of Ceylon on the map of the World, and I trust the time is not far distant when a properly equipped observatory will be established in Colombo, with branches at all the more important centres supplied with up-to-date instruments. When that is done results will be obtained that must be of great importance in Meteorological Science.

The value of the observations already on record has been discounted by the want of permanent location for some of the sheds in which the instruments are kept, but it is hoped that those now selected for Galle, Kurunegala, and Ratnapura will be lasting. These three may be classed as of primary importance, showing very diversified records. It is further anticipated that when the shed at Kandy is removed to its new site near the office of the Superintendent of Surveys, it will also have found a permanent resting place, as the records of this station cannot fail to be as valuable as those of any outstation in the Island. I fully concur in Mr. Ingles's remarks regarding the Colombo observatory, the proper location of which is of the very first importance; but it is too large a question to be dealt with here.

The work of the outstation observers has been satisfactorily done, though, as usual, the superiority of those received from Hakgala show the zeal and energy that have characterized Mr. Nock's interest in this work for many years.

I have to express my thanks to the numerous planters and others who have regularly supplied me with rainfall and other records throughout the year. Without this gratuitous service it would be impossible for the Department to publish many of the valuable records it is now able to place before the public.

P. D. WARREN,
Acting Surveyor-General.

June, 1902.

GENERAL REMARKS.

THE self-registering instruments have continued to work well during the year, and from the barograph curves I have been enabled to draw up a diagram, which will be found at the end of this report, showing the hourly differences from the mean of the two years 1900 and 1901; this should prove useful to topographical surveyors in obtaining the approximate heights of hills for purposes of hill sketching; it will obviate the necessity of taking simultaneous aneroid readings, except when great accuracy is required, as I have ascertained from the daily barometer readings at high and low stations that the diurnal wave curve does not appear to vary to any appreciable extent throughout the whole Island.

2. One observatory was dismantled at the beginning of the year, being that at Kurunegala, owing to the office of the Superintendent of Surveys being abolished, and my being unable to secure the services of a responsible observer so long as the building remained in its former site. A new building has been sanctioned and will be erected in the hospital grounds. Observations should commence by the end of February, 1902. New sheds are also being built at Ratnapura and Galle. The new observatories at the Boer Camps, Diyatalawa and Ragama, have been working throughout the year. I visited the former station in January, as also the Nuwara Eliya observatory. At Kurunegala I selected the site for the new shed in February, and decided on the hospital grounds; and also at Ratnapura, the old fort being finally chosen. In March I inspected the buildings and instruments at Badulla and took up a barometer to that station. In May Puttalam observatory, and in July Mannar and Anuradhapura observatories were visited by me, as also were Galle in August, and Kandy, Nuwara Eliya, and Hakgala in December. As regards the Colombo observatory, it should be moved into more open ground at the back of this office, as far away from the studio as possible, without getting too near the road. At present it is too much shut in, and the close proximity of so many buildings on three sides of it must interfere with the reliability of the readings.

3. There were no earthquakes or hailstorms reported during 1901 in Ceylon.

4. It was unfortunate that the weather on the 11th November proved very inauspicious for observing the annular eclipse of the sun. I travelled to Kurunegala, being the easiest station to get at to the north of Colombo, but was disappointed, as, although the morning broke fine and gave promise of a clear sky, soon after 9 A.M. it clouded up and rained in torrents for the rest of the day. I believe Captain Molesworth was more fortunate at Trincomalee; he forwarded me a most interesting photograph of the sun at the time of the middle eclipse.

5. *Weather.*—The rainfall has been considerably less than the average during the year over the whole Island. This is due principally to defective rainfall during the south-west monsoon. May, June, August, September, and December have been abnormally dry, the other months having received their usual supply of rain. The western and central districts have suffered most: Colombo being 10 inches, Mannar 9 inches, Hakgala 8 inches, and Badulla as much as 25 inches short of their averages. On the other hand, Galle and a small patch of country surrounding it show the considerable excess of 14 inches above its average.

The air pressure was generally higher than the average, especially over the eastern half of the Island, while a belt of low pressure persisted throughout almost the whole year over the central districts and western coast.

The temperature was higher than the average over the north-eastern and southern districts, the central portion experiencing a small diminution generally, especially during November.

6. The following tables show the absolute maxima and minima of the temperature and pressure during the year and since 1870:—

Temperature.

* Barometer reduced to 32° F.

7. *Climate of Ceylon.*—The climate varies considerably in different parts of the Island, both as regards temperature and rainfall. In the lowlands the climate is tropical, but in the mountains in the interior the climate is found equal to many parts of Europe.

The mean temperature for the year 1901 was highest at Mannar and lowest at Nuwara Eliya, being 82·6° and 59·4° respectively.

At Colombo and Kandy the mean temperature was 81·1° and 75·2° respectively.

The *mean daily range* of temperature, *i.e.*, the mean of the daily differences between the maximum and minimum temperatures, was highest at Anuradhapura, having been 18·3°, and lowest at Galle, 7·2°.

The differences recorded at Colombo and Kandy were 13·0° and 16·4° respectively.

The *absolute range* or differences between the highest and lowest temperature of the air recorded during the year was greatest at Nuwara Eliya and lowest at Galle; having been 31·1° and 10·4° respectively.

The absolute difference at Kandy was 25·7° and at Colombo 19·3°.

The hottest station, taking the mean temperature of night and day all the year round into account, was Mannar (82·6°). The coolest, Nuwara Eliya (59·4°). Colombo and Kandy were 81·1° and 75·2° respectively.

8. *Meteorological Observatories.*—The fifteen meteorological observatories are distinguished in Table I., which also shows the latitude, longitude, and elevation of the different barometer cisterns above sea-level.

All stations (with the exception of Ragama, where no barometer has been established) are supplied with the following instruments:—Standard barometer, maximum air thermometer, minimum air thermometer, maximum wet-bulb thermometer, minimum wet-bulb thermometer, solar radiation thermometer *in vacuo*, terrestrial radiation thermometer, anemometer, and rain-gauge.

Besides the above-mentioned stations there are 74 rain-gauge stations reporting their observations monthly to this office; of these 70 are in the wet and 4 in the dry zone.*

The map facing page 1 shows the distribution of these observatories and rain-gauge stations, and by varying depths of colour the mean annual rainfall over different parts of the Island.

* The "wet zone" is where the rainfall is over 60 in. in the year; the "dry zone" where the rainfall is less than 60 in.

SOLAR RADIATION.

The instrument employed at the observatories for determining the equilibrium temperature of solar radiation consists of a sensitive mercurial maximum thermometer, having the bulb and part of the stem covered with dull lamp-black. It is enclosed in a larger glass jacket, from which the greater part of the air has been exhausted. These instruments, which were previously placed on stands about one foot above ground, were in 1885 mounted on stands four feet from the ground, the height now generally employed in meteorological observatories. The effect of this change is that the difference between the solar radiation readings and the maximum in shade has been below the average obtained in previous years at almost all the stations. This is due to the fact that the radiation from the ground and surrounding objects has been diminished by the increased height of the instrument. At the same time the readings are probably much nearer their true values.

The relative amount of solar radiation, or intensity of the sun's rays, is indicated by the difference between the temperature registered by this instrument and that registered by the maximum air thermometer in the shade. For various reasons, however, the temperature indicated by this instrument affords only an approximate measure of the amount of solar radiation that penetrates the atmosphere.

Table II. shows the mean monthly excess of the maximum temperature in the sun over the maximum temperature in the shade, deduced from the observations extending over a long series of years in Ceylon.

TABLE II.—Average Excess of Insolation over the corresponding Maximum Shade Temperature.

NOCTURNAL RADIATION.

The thermometer employed for registering the cooling of the stratum of air in contact with the earth, as the result of radiation towards the sky at night, is a sensitive spirit minimum thermometer. It is placed on a pad of non-conducting material (blanket) resting on the ground.

The relative amount of radiation from the earth is indicated by the difference between the temperature registered by this thermometer and that registered by the minimum air thermometer.

Table V., below, shows the mean monthly depression of the minimum thermometer on the ground level below the minimum in shade four feet above the ground, deduced from eight to twenty years' observations in Ceylon.

TABLE V.—Average Depression of Monthly Mean Nocturnal Temperatures below Minimum Shade Temperature.

Table IX. (in appendix) gives the monthly and yearly means of the daily readings; the monthly and yearly means of the readings at 21*h*. 30*m*. and 3*h*. 30*m*.; the monthly and yearly means of the maximum and minimum temperatures with the mean daily range; the highest and lowest temperatures, the date on which they occurred, and the yearly means; and the absolute range of temperature for each month and for the year.

Table X., next page, shows the variations from the averages of Table VIII. of the monthly and yearly means for the year 1901.

TABLE X.—Comparison of Monthly Mean Temperatures in 1901 with the Averages.

Table XII. (in appendix) gives the sea-level equivalents of the mean monthly temperatures in Table IX., omitting hill stations. The reduction to sea-level temperature has been made by adding one degree of temperature for every 450 ft. of elevation.

ATMOSPHERIC PRESSURE.

The barometer used at the Colombo Observatory is a standard, by Negretti and Zambra, which has been compared with the Kew standard. All the barometers at outstations are on Fortin's principle (constructed some by Casella, others by Negretti and Zambra), and have been compared with the Colombo instrument. At all the stations the instruments are placed in buildings and are preserved, as far as possible, from extremes of temperature.

Table XIII., below, gives the monthly mean barometric readings deduced from observations in Ceylon extending over a series of years.

TABLE XIII.—Average Monthly Mean Pressure of Stations in Ceylon.

Table XVI. (in appendix) gives the monthly and yearly means of pressure in 1901, according to the tables printed in the "Instructions to Observers at Ceylon Meteorological Stations."

WIND.

The instrument employed at the Colombo Observatory is a self-registering Beckley anemograph. It records the direction and velocity of the wind, continuously, on a revolving drum driven by clockwork. At outstations the instruments employed consist of the ordinary wind-vane for direction, and a Robinson anemometer for registering on a dial the distance travelled by the wind.

Table XVII. (in appendix) gives the number of times that each of eight wind-directions and calms were observed at 21*h*. 30*m*. and 3*h*. 30*m*. by the ordinary wind-vane at outstations; the trigonometrical resultant of these observations, computed by Lambert's formula; and the mean diurnal movement of the air; also the average monthly values of the last two data, computed from as many years as have furnished anemometric registers.

The Colombo anemograph records the number of miles travelled in each of sixteen directions.

HYGROMETRY.

The humidity of the air, the elastic force of aqueous vapour, and the temperature of the dew point are inferred from the relative temperatures of identical dry and wet-bulb thermometers, when exposed to the same conditions. In order that the evaporation of the water from the wet-bulb may take place freely, the instruments are kept in outside sheds: if kept in rooms, the reading of the wet-bulb will not give a true indication, owing to restrained evaporation.

Table XVIII. (in appendix) gives the monthly and yearly means of the readings of the wet-bulb at 21*h*. 30*m*. and 3*h*. 30*m*.; the monthly and yearly means of the minimum wet-bulb; the mean range and the adopted wet-bulb temperature of each month (the mean of the minimum, 21*h*. 30*m*. and 3*h*. 30*m*. readings); also the difference of these several values and the corresponding air temperature.

Table XIX. (in appendix) gives the mean vapour tensions of the several months of 1901, and of those observed at 21*h*. 30*m*. and 3*h*. 30*m*., and also those deduced from the reading of the minimum dry and wet-bulb thermometers.

Table XX., below, shows the average monthly and yearly mean vapour tension for different stations, deduced from observations extending over a number of years in Ceylon.

CLOUD PROPORTION.

The relative proportion of cloud is determined in the usual manner by estimating the average amount of sky covered, 10 denoting a sky entirely and continuously overcast, and zero a cloudless sky.

Table XXV., next page, shows the average proportion of clouded sky in each month, deduced from the registers of past years.

TABLE XXV.—Average Proportion of Clouded Sky in each Month, deduced from Registers of past Years.

PART III.—JUDICIAL.

JUDICIAL STATISTICS.

REPORT OF THE SOLICITOR-GENERAL ON THE STATISTICS RELATING TO THE ADMINISTRATION OF CRIMINAL JUSTICE IN CEYLON DURING 1901.

THE delay in submitting this report is due to the fact that the statistical tables on which it is founded reached my hands only eight days ago. This is much to be regretted, because I believe that it is possible for the Magistrates and District Judges of the Island to complete their returns before the end of January every year, and for the clerk who collates and prepares the seventeen tables needed for this report to finish his work in a month. The writing of the report on the lines laid down here will require a week, and the printing of it about three weeks. Thus, the report ought to be in the hands of the Government early in April.

In my Special Report on Crime, printed and published as a Sessional Paper of the Legislative Council (No. VIII. of 1898), I discussed and settled certain general principles relating to the question of the movement of crime, such as the meaning of the term "crime," what is the best index of crime, upon what lines crime should be grouped, and how statistical tables relating to crime should be constructed; and then I considered the following questions, namely :—

(*a*) The increase or decrease of crime in Ceylon ;
(*b*) The geographical distribution of such crime, and the proportion of serious offences in each of the districts to the population thereof ;
(*c*) The state of crime in towns as compared with rural districts ;
(*d*) The tendency to mitigation of sentences ;
(*e*) The previous convictions of criminals ; and
(*f*) Crime in relation to sex, age, and nationality in Ceylon.

2. In the present report I shall adhere to the principles settled as above.

INCREASE OR DECREASE OF CRIME. (Paragraphs 3–20.)

3. The subject of increase or decrease of crime in Ceylon necessitates the consideration of the following questions :—

(1) Crime tried by Village Tribunals ;
(2) Crime tried by Police Courts ;
(3) Crime tried by District Courts ; and
(4) Crime tried by the Supreme Court.

By crime is meant wilful acts of disobedience to the law. (1) and (2) relate to what may be called "ordinary" crime ; (3) and (4) relate to the "serious" crime of the country.

CRIME TRIED BY VILLAGE TRIBUNALS.

Year.	Breaches of Village Council Rules.	Assaults.	Thefts.	Malicious Injuries.	Cattle Trespass.	Maintenance, &c.	Amicably settled in Court.	Total Decided.
1891	14,554	6,442	5,222	1,173	3,024	211	6,959	37,585
1892	15,818	6,918	5,715	1,179	3,305	121	7,326	40,382
1893	14,216	6,260	5,511	922	2,485	60	6,440	35,894
1894	15,778	6,625	5,318	997	2,350	23	7,381	38,472
1895	17,241	6,883	5,600	1,152	2,344	28	6,987	40,235
Annual average for 1891–1895 ...	15,521	6,626	5,473	1,085	2,702	89	7,019	38,515
1896	18,443	6,331	4,292	1,056	2,331	17	7,117	39,587
1897	19,168	7,011	4,619	1,169	2,810	3	8,631	43,411
1898	18,337	7,027	4,340	1,002	2,508	4	7,156	40,374
1899	20,324	6,657	4,183	891	2,946	4	7,151	42,181
1900	23,011	6,574	4,035	1,114	2,260	3	6,757	43,754
Annual average for 1896–1900 ...	19,857	6,720	4,294	1,046	2,571	6	7,362	41,856
1901	21,055	6,082	4,091	1,369	2,038	3	5,453	40,091

4. From this table we learn that the crime which goes for disposal before the Village Tribunals has on the whole remained stationary. According to the rule of proportion of persons tried to population per 100,000 inhabitants, there appears to be a fall (as shown in the following table) from 1,207 persons in the quinquennial period 1891–1895 to 1,206 persons in the period 1896–1900 :—

Quinquennial Period.	Annual Average of Persons tried by Village Councils.	Annual Average of Population for each Quinquennial Period.	Proportion per 100,000 Inhabitants.
1891–1895	38,515	3,190,000	1,207
1896–1900	41,856	3,470,000	1,206

In 1901, the proportion per 100,000 inhabitants was 1,120.

CRIME TRIED BY POLICE COURTS.

5. The following table exhibits the crimes which went before Police Courts for trial (and not committed to higher courts) during each of the years in the period 1891–1901 :—

Summary Offences.

Year.	Offences against the Person.	Offences against Property.	Offences under Labour Ordinances.	Cattle Stealing.	Other Offences.	Total for each Year.
1891	8,992	13,172	893	2,478	26,628	52,163
1892	8,714	13,336	472	2,974	27,685	53,181
1893	8,426	12,902	531	3,261	30,852	55,972
1894	20,145	19,581	2,643	3,576	35,324	81,269
1895	19,338	16,980	2,495	3,749	36,807	79,369
Annual average for 1891–1895 ...	13,123	15,194	1,407	3,208	31,459	64,391
1896	16,329	14,512	3,008	2,740	36,032	72,621
1897	17,391	16,121	2,984	3,009	37,175	76,680
1898	14,556	15,322	2,906	2,479	35,963	71,226
1899	15,375	12,813	2,549	2,015	37,226	69,978
1900	16,821	13,950	2,011	2,544	33,434	68,760
Annual average for 1896–1900 ...	16,094	14,544	2,692	2,557	35,966	71,853
1901	16,769	14,543	2,682	2,374	40,659	77,027

In 1901 there were 675 cases more against the person than in the annual average for the period 1896–1900 ; and 1 case against property less than in the annual average for the same period ; and 183 cases of cattle stealing less than in the annual average for the same period.

6. With regard to the total number of summary offences, the quinquennial averages, when brought into relation with the population of the country, show an increase. For every 100,000 inhabitants there were tried by the Police Courts 2,019 persons during 1891–1895 and 2,071 persons during 1896–1900. The table is as follows :—

Quinquennial Period.	Annual Average of Persons tried by Police Courts.	Annual Average of Population for each Quinquennial Period.	Proportion per 100,000 Inhabitants.
1891–1895	64,391	3,190,000	2,019
1896–1900	71,853	3,470,000	2,071

In 1901, the proportion per 100,000 inhabitants was 2,219.

CRIME TRIED BY DISTRICT COURTS AND THE SUPREME COURT.

7. For the purpose of comparing Ceylon with England, tables of figures (see pages 8 and 9) have been prepared on the model of the English tables, in which the indictable offences tried by our Supreme Court and District Courts (corresponding to the Courts of Assize and Quarter Sessions) are arranged under six classes, viz., (1) offences against the person ; (2) offences against property with violence ; (3) offences against property without violence ; (4) malicious injury to property ; (5) forgery and offences against the currency ; and (6) other offences not included in the above.

8. Table I. of the Appendix relates to the District Courts, and Table II. of the Appendix to the Supreme Court, and both these tables exhibit the "serious" crime of the country.

OFFENCES AGAINST THE PERSON.

9. The total number of persons tried before all the District Courts of the Island and the Supreme Court for offences against the person in each of the years 1891–1901, together with the annual average for the two quinquennial periods 1891–1895 and 1896–1900, stands as follows :—

	1891.	1892.	1893.	1894.	1895.	Annual Average, 1891–1895.	1896.	1897.	1898.	1899.	1900.	Annual Average, 1896–1900.	1901.
District Courts ...	390	402	417	512	320	408	640	837	885	405	502	653	694
Supreme Court ...	180	226	223	279	214	224	234	334	322	217	251	272	330
Total ...	570	628	640	791	534	632	874	1,171	1,207	622	753	925	1,024

The year 1901 shows a rise of 99 cases from the average for 1896–1900.

10. Offences against the person tried by the District Courts and the Supreme Court include (1) grievous hurt and hurt by dangerous means ; (2) rape and abduction ; (3) murder, attempt to murder, and culpable homicide not amounting to murder. The following table shows the number of persons tried for the first-named group of offences :—

	1891.	1892.	1893.	1894.	1895.	Annual Average, 1891–1895.	1896.	1897.	1898.	1899.	1900.	Annual Average, 1896–1900.	1901.
Grievous hurt ...	190	123	232	181	128	171	213	415	322	221	166	267	408
Hurt by dangerous means ...	189	257	181	186	141	191	286	298	411	159	253	281	199
Total ...	379	380	413	367	269	362	499	713	733	380	419	548	607

11. As regards this group of cases, the annual average for the two quinquennial periods 1891–1895 and 1896–1900 shows a rise from 362 to 548—that is, 186 cases ; and 1901 shows a rise of 59 cases from the average for 1896–1900.

12. The table given below proves that for every 100,000 inhabitants there were tried in the District Courts and the Supreme Court for grievous hurt and hurt by dangerous means on an average, in each year of the period 1891–1895 and 1896–1900, 11·35 and 15·79 persons respectively :—

Period.	Annual Average of Persons tried.	Annual Average of Population.	Proportion per 100,000 Inhabitants.
1891–1895	362	3,190,000	11·35
1896–1900	548	3,470,000	15·79

13. As regards the second group of offences, on an average there were tried for each of the years 1891–1895, 17 persons for rape and 5 for abduction, and for each of the years 1896–1900, 28 and 8 persons respectively. In 1901 the figures are 17 for rape and 0 for abduction, as against 23 and 0 for 1900.

14. The following table shows the number of persons tried for the third group of offences, viz., murder, attempt to murder, and culpable homicide not amounting to murder :—

	1891.	1892.	1893.	1894.	1895.	Annual Average, 1891–1895.	1896.	1897.	1898.	1899.	1900.	Annual Average, 1895–1900.	1901.
Murder ...	89	109	58	75	59	78	90	72	74	42	97	75	100
Attempt to murder	4	7	1	6	2	4	5	12	11	7	12	9	41
Culpable homicide not amounting to murder ...	19	11	42	62	70	41	24	54	39	54	37	42	82
Total ...	112	127	101	147	131	123	119	138	124	103	146	126	223

15. The annual average of persons tried for murder, &c., when brought into relation with the annual average of the population for the corresponding quinquennial periods, yields the following results :—

Period.	Annual Average of Persons tried.	Annual Average of Population.	Offenders per 100,000 Inhabitants.
1891–1895	123	3,190,000	3·86
1896–1900	126	3,470,000	3·63

In 1901, as there were 223 persons tried, the ratio per 100,000 is 6·4.

OFFENCES AGAINST PROPERTY.

16. The total number of persons tried before all the District Courts of the Island and the Supreme Court for offences against property (as classified in Tables I. and II. of the Appendix) in each of the years 1891–1901 is as follows :—

	1891.	1892.	1893.	1894.	1895.	Annual Average, 1891–1895.	1896.	1897.	1898.	1899.	1900.	Annual Average, 1896–1900.	1901.
Persons tried ..	551	660	575	776	608	634	719	1,270	1,121	677	918	941	1,274

There is an abnormal rise of 333 cases upon the average for the previous five years 1896–1900.

17. Of the persons tried as aforesaid, those tried for burglary, robbery, and theft appear in the following table :—

	1891.	1892.	1893.	1894.	1895.	Annual Average, 1891–1895.	1896.	1897.	1898.	1899.	1900.	Annual Average, 1896–1900.	1901.
House-breaking ...	186	200	199	210	143	188	163	349	250	162	292	243	389
Robbery ...	168	245	174	316	157	212	172	388	448	245	238	298	368
Cattle stealing ...	38	13	9	26	43	26	31	107	38	25	67	54	65
Other thefts ...	57	75	54	58	124	74	184	206	180	115	199	177	226
Total ...	449	533	436	610	467	500	550	1,050	916	547	796	772	1,048

Here also we have an abnormal rise of 276 cases in 1901, as compared with the average for 1896–1900.

18. The persons tried for forgery and false documents, as shown in Tables I. and II. of the Appendix, number on an average 24 for the quinquennial period 1891–1895 and 36 for 1896–1900. In 1901 there were no less than 57 persons tried under this head.

For coining and uttering counterfeit coin or notes, 13 is the annual average for 1891–1895 and 21 for 1896–1900. In 1901 there were 13 persons tried under this head.

For riot and unlawful assembly, the annual average is 76 persons for 1891–1895 and 104 for 1896–1900. In 1901 there were 129 persons indicted for these offences.

Under the head of perjury, the annual average was 15 for 1891–1895 and 20 for 1896–1900. In 1901 there were 19 persons tried for perjury.

ANNUAL MOVEMENT OF SERIOUS CRIME.

19. The following table shows the annual movement of serious crime (or persons tried upon commitment by the Supreme Court and all District Courts) during each of the ten years ended 1901 :—

	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Murder	109	58	79	59	90	72	74	42	97	100
Culpable homicide not amounting to murder	11	42	62	70	24	54	39	54	37	82
Attempt to murder	7	1	6	2	5	12	11	7	12	41
Grievous hurt	123	232	181	128	213	415	322	221	166	408
Hurt by dangerous weapons ...	257	181	186	141	286	298	411	159	253	199
House-breaking	200	199	210	143	163	349	250	162	292	389
Robbery	245	174	316	157	172	388	448	245	238	368
Theft of cattle	13	9	26	43	31	107	38	25	67	65
Other thefts	75	54	58	124	184	206	180	115	199	226
Rape	14	19	20	14	27	36	35	17	23	17
Coining and uttering counterfeit notes ...	15	13	14	17	30	38	27	5	10	13
Forgery	21	17	23	27	45	28	51	37	19	57
Perjury	21	20	15	15	9	34	28	16	14	19
Riot and unlawful assembly ...	142	64	99	55	46	164	93	101	115	129

SERIOUS CRIME FOR 1901 COMPARED WITH ITS NORMAL LEVEL.

20. The following table shows (1) the *mean* flow of each of the serious crimes therein mentioned during the decade 1891–1900 ; (2) the current of serious crime in 1901 ; and (3) its rise or fall in 1901 in reference to the mean flow or normal level :—

	Annual Average of Persons tried during 1891–1900 (mean flow).	Persons tried in 1901 (current in 1901).	Difference.	
			Rise.	Fall.
1. Murder	76·9	100	24	—
2. Attempt to murder ...	6·7	41	35	—
3. Culpable homicide not amounting to murder ...	41·2	82	41	—
4. Grievous hurt	219·1	408	189	—
5. Hurt by dangerous weapons	236·1	199	—	37
6. House-breaking	215·4	389	174	—
7. Robbery	255·1	368	113	—
8. Cattle stealing	39·7	65	26	—
9. Other thefts	125·2	226	101	—
10. Rape	21·7	17	—	4
11. Forgery	29·6	57	28	—
12. Perjury	18·3	19	1	—
13. Riot and unlawful assembly	91·5	129	38	—
14. Counterfeit coining	18·0	13	—	5

GEOGRAPHICAL DISTRIBUTION OF CRIME. (Paragraphs 21 and 22.)

21. The following table shows the geographical distribution of *serious* crime (*i.e.*, the crime tried by the Supreme Court and the District Courts). Balapitiya takes the lead for 1901, as it did for 1899 and 1900 :—

Order in 1901.	Judicial Divisions of the Island.	Proportion of Persons tried per 10,000 Inhabitants. For 1900.	For 1901.	Order in 1900.
1	Balapitiya	19·8	21	1
2	Chilaw and Marawila	13·3	13·7	2
3	Galle	12·5	13·3	3
4	Matara	11·9	12·6	4
5	Kalutara	10·7	11·6	5
6	Kandy	9·5	11	6
7	Panadure	9·1	10·6	7
8	Puttalam	7·7	9·2	8
9	Trincomalee	7·5	8·2	9
10	Tangalla	7·3	7·4	10
11	Kayts	3·4	7·2	21
12	Batticaloa and Kalmunai	6·3	7	13
13	Colombo	6·6	6·9	11
14	Mullaittivu	6·6	6·6	11
15	Jaffna and Mallakam	6·5	6·2	12
16	Hambantota	4·9	6·1	16
17	Haldummulla	5·5	5·5	14
18	Matale	5·1	5·2	15
19	Hatton	4	4·8	18
20	Badulla	4·7	4·4	17
21	Nuwara Eliya	3·3	4	22
22	Panwila and Urugala	3·9	3·8	19
23	Ratnapura and Rakwana	3·1	3·5	24
23	Kurunegala	3	3·5	25
23	Point Pedro and Chavakachcheri	2·2	3·5	28
24	Avisawella	3·7	3·3	20
25	Negombo	3·2	2·9	23
26	Anuradhapura	2·5	2·6	27
27	Galagedara	2·8	2·5	26
28	Gampola	1·6	1·4	30
29	Vavuniya	1·2	1·2	31
30	Kegalla	2	1·1	29
31	Mannar	·4	·8	32

22. The following table shows the distribution of *ordinary* crime, which does not seem to bear any relation to the distribution of *serious* crime :—

Order in 1901.	Judicial Divisions of the Island.	Proportion of Persons tried per 10,000 Inhabitants. For 1900.	For 1901.	Order in 1900.
1	Hatton	303	321	1
2	Kandy	248	239	2
3	Tangalla	146	185	4
4	Hambantota	175	165	3
5	Colombo	120	126	6
6	Nuwara Eliya and Maturata	126	123	5
7	Trincomalee	118	119	7
8	Jaffna and Mallakam	117	107	8
9	Puttalam	94	105	9
10	Galle	91	99	11
11	Matale	93	98	10
12	Chilaw and Marawila	85	91	13
13	Haldummulla	61	83	17
14	Kalutara	83	81	14
15	Kayts	87	78	12
15	Balapitiya	70	78	16
16	Gampola	73	73	15
17	Mannar	56	66	21
18	Negombo	60	64	18
19	Panadure	56	59	21
20	Matara	58	56	19
21	Mullaittivu	57	54	20
21	Ratnapura and Rakwana	56	54	21
22	Point Pedro and Chavakachcheri	54	53	22
23	Kurunegala	40	43	25
24	Panwila and Urugala	39	41	26
25	Anuradhapura	47	39	23
26	Badulla	42	36	24
27	Batticaloa and Kalmunai	32	34	28
28	Avisawella	34	29	27
29	Galagedara	31	25	29
30	Kegalla	23	18	30
31	Vavuniya	19	14	31

CRIME IN TOWNS AND RURAL DISTRICTS.

23. No complete statistics are available under this head. It is time that our Courts should begin to tabulate figures relating to this important subject.

VARIATIONS IN SENTENCES. (Paragraphs 24 and 25.)

24. The following table shows the punishments awarded by Police Courts on persons tried and convicted by them during 1892–1901 :—

Nature of Punishment.	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Fine	10,104	11,135	10,024	10,695	13,893	13,201	13,432	15,185	15,325	14,995
Fine and simple imprisonment ...	8	9	63	26	13	35	18	14	19	31
Fine and rigorous imprisonment ...	40	51	65	50	50	71	96	54	93	82
Simple imprisonment only ...	58	57	58	59	72	62	96	73	76	97
Rigorous imprisonment only ...	2,496	2,718	2,142	2,336	1,902	2,782	3,036	2,640	2,421	2,419
Bound over	142	361	669	684	588	505	611	450	687	618
Whipping of juvenile offenders ...	213	463	400	315	292	369	415	347	377	391

25. The sentences passed by *all* the courts of the Island appear classified in the following table :—

Sentences.	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Not exceeding 2 weeks	2,125	2,261	2,019	1,707	1,807	2,103	2,070	1,871	1,519	1,960
Do. 1 month	1,451	1,681	1,503	1,614	1,511	1,971	1,993	1,803	1,858	1,746

Do. 6 months	998	976	865	703	434	819	876	734	829	793
Do. 1 year	317	282	309	243	280	365	396	254	284	292
Do. 2 years	370	364	346	292	199	288	255	203	274	281
Do. 3 years					19	87	68	60	61	65
Do. 4 years					17	18	35	16	47	61
Do. 5 years					48	87	59	61	58	125
Between 5 and 10 years	130	57	73	53	76	79	57	52	70	113
Over 10 years					8	9	8	11	10	2
To be hanged	26	23	43	26	37	40	28	27	51	47

PREVIOUS CONVICTIONS. (Paragraphs 26 and 27.)

26. The following table shows the number of persons convicted once and oftener, exclusive of the Road Ordinance defaulters :—

Prisoners.	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Not previously convicted ...	5,198	5,653	4,934	4,429	4,198	5,806	5,971	5,163	4,900	5,382
Convicted once before	926	718	717	646	653	703	649	583	600	645
Convicted twice before	255	192	205	157	201	230	197	166	222	255
Convicted thrice before	102	77	105	100	84	104	95	91	100	123
Convicted oftener before ...	157	155	180	166	152	158	139	155	178	176
Total ...	6,638	6,795	6,141	5,498	5,288	7,001	7,051	6,158	6,000	6,581

27. The annual average for the quinquennial period 1897–1901 stands as follows :—

Prisoners.	Percentage.
Not previously convicted	83·0
Convicted once before	9·7
Convicted twice before	3·3
Convicted thrice before	1·6
Convicted oftener than thrice before	2·4
Total ...	100·0

If we remember that in England the ratio of persons previously convicted to persons not previously convicted is as 55 to 45, we have reason to be satisfied with our ratio of 17 to 83.

CRIME IN RELATION TO SEX.

28. The daily average of the male and female convicts in all our prisons is shown in the following table :—

	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Males ...	2,657	2,467	2,351	2,165	1,975	2,174	2,492	2,330	2,199	2,412
Females ...	26	28	30	27	21	30	32	30	32	36

CRIME IN RELATION TO NATIONALITY.

29. The following table shows the nationality of those who, upon conviction, were sent to jail :—

	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.
Sinhalese ...	6,423	5,994	5,308	4,804	4,426	5,655	5,147	4,619	4,472	4,911
Tamils ...	1,655	1,302	930	958	1,017	1,220	1,559	1,295	1,224	1,420
Moors ...	503	446	474	314	316	422	516	408	383	392
Malays ...	55	79	64	46	41	46	46	34	46	25
Burghers ...	40	48	34	38	38	54	44	33	39	56
Europeans ...	95	14	14	34	38	37	33	21	21	39
Others ...	47	79	43	53	60	67	85	77	75	92

Of the 39 Europeans convicted in 1901, only 2 were resident in Ceylon, the remaining 37 being non-residents.

30. The ratio of the prisoners of each race to 100,000 of its population stands as follows :—

	Population.	Annual Average of Prisoners, 1897-1901.	Ratio per 100,000, 1897-1901.
Sinhalese	2,334,817	... 4,961	... 212
Tamils	952,237	... 1,344	... 141
Moors	224,719	... 424	... 189
Burghers	23,312	... 45	... 193
Malays	11,207	... 39	... 348

Colombo, August 8, 1902.

P. RÁMANÁTHAN,
Solicitor-General.

APPENDIX.

—Table showing the Number of Persons committed for Trial and Nature of Offences (Indictable) in each Year from 1891-1901 before District Courts of Ceylon.

Indictable Offences.	1891	1892	1893	1894	1895	Annual Average, 1891-1895.	1896	1897	1898	1899	1900	Annual Average, 1896-1900.	1901
CLASS I.—OFFENCES AGAINST THE PERSON.

REPORT OF THE CROWN COUNSEL, WESTERN CIRCUIT, FOR 1901.

I HAVE the honour to submit the return of cases disposed of in the Western Circuit during the year 1901.

2. A reference to Table A shows that the number of cases committed for trial before the Supreme Court and District Courts is in excess of previous years, and in comparison with the year 1899 the increase is marked.

3. Table C shows that there has been a slight increase in the number of cases of homicide, but it is noticeable that 67 per cent. of the persons tried have been convicted of murder or of a lesser offence.

4. As compared with the past three years, there is a marked increase in the number of cases tried by the District Court of Kalutara.

Colombo, May 2, 1902.

L. MAARTENSZ,
Acting Crown Counsel.

ANNEXURES.

A.—Return of Cases referred to Crown Counsel in the Western Circuit during the Years 1897, 1898, 1899, 1900, and 1901.

Year.	No. of Cases committed for Trial: Before Supreme Court.	Before District Court.	No. referred to Police Courts.	No. in which Accused were directed to be discharged.	Total No. of Cases disposed of.	No. pending at end of Year.

REPORT OF THE CROWN COUNSEL, MIDLAND CIRCUIT, FOR 1901.

I HAVE the honour to annex my returns for the year 1901 and to report as follows :—

Tables A, B, B (1), D, and E show an increase in the amount of serious crime within the Midland Circuit during the year 1901. But Table A shows but a slight increase of cases committed for trial before the Supreme Court when compared with the years 1897 and 1898. Table B shows that 128 cases were tried by the Supreme Court, and compares unfavourably with the 76 cases tried in the preceding year. But in 1900 the large number of 19 cases were pending at the end of the year, whereas only 2 cases were handed over from the year 1901 to the year 1902, so that the comparison is not quite so unfavourable as it looks at first sight.

Table C shows an apparent increase in the cases of homicide tried during the year. But of these no fewer than 8 cases of homicide were handed over for trial from the year 1900, whilst not a single case of homicide was handed over to the year 1902. Accordingly, if the cases committed for trial in each of the last four years had been tried in their own year, the figures for 1898 would be 25, for 1899 34, for 1900 42, and for 1901 35, showing as a matter of fact a slight decrease when compared with the homicides of the preceding year.

Tables B (1), D, and E show an increase of trials before the District Courts when compared with the returns of the two preceding years, but they in turn compare favourably with the years 1897 and 1898.

Against this increase of crimes tried before the Higher Courts there is a most satisfactory falling off in all the three classes of cases dealt with in Table B (2), theft of cattle, hurt with the knife, and cases tried by the Police Courts by consent, when compared with the year 1899.* Theft of cattle has come down to 238 cases, and of these no fewer than 155 come from the two Police Courts of Kegalla and Kurunegala, leaving only 83 cases for the whole of the Central, North-Central, and Uva Provinces combined. Twenty years ago this offence was rampant throughout the Island, and as late as 1894 the number of cattle stealing cases tried by the Magistrates of the Midland Circuit was as high as 558. Hurt with a knife also shows a slight decrease when compared with 1899, but a very distinct decrease when compared with 1898, the figures for the three years being 1898 358, 1899 306, 1901 300.

Taken as a whole, I am not prepared to regard the statistics for the year 1901 in an unfavourable light. If the trials before the Higher Courts were abnormally high, the percentage of cases in which convictions were obtained were also abnormally high, averaging all but two-thirds of the cases tried, which is considerably above the average of either of the years 1898 or 1899,† and this, I think, indicates that the work of the Police Magistrates, the police, and the headmen taken as a whole was well done throughout the Circuit.

J. H. TEMPLER,
Crown Counsel.

Colombo, April 22, 1902.

* Owing to my absence from the Island this return was not prepared for the year 1900.
† Owing to my absence from the Island when the 1900 statistics were being prepared this comparison for the year 1900 cannot be made.

ANNEXURES.

A.—Return of Cases forwarded to Crown Counsel, Midland Circuit, during the Years 1897, 1898, 1899, 1900, and 1901.

REPORT OF THE CROWN COUNSEL, NORTHERN AND SOUTHERN CIRCUITS, FOR 1901.

I HAVE the honour to submit returns of cases disposed of in the Northern and Southern Circuits during the year 1901, Mr. Cooke, who had charge of the Circuit, being unable to deal with the returns himself.

Northern Circuit.

A slightly larger number of cases were disposed of in the Supreme Court and District Courts than in former years, the increase being more marked in the number of cases tried by the District Courts.

Table E shows that the largest number of cases were dealt with by the District Court of Jaffna.

Table B shows that there were only two cases of murder, in both of which the accused were acquitted.

Southern Circuit.

Table F shows the average number of cases tried by the Supreme Court and District Courts.

Table G shows that in comparison with the previous three years there has been a slight increase in the number of murder cases.

House-breaking and theft, and robbery accompanied by hurt, furnish by far the larger number of cases dealt with.

The returns on the whole, however, appear to me to be satisfactory.

L. MAARTENSZ,
Acting Crown Counsel.

May 19, 1902.

ANNEXURES.

A.—Return showing the Number of Cases tried in the Supreme and District Courts in the Northern Circuit during the Years 1891 to 1901.

Year.	Supreme Court.	District Courts	Total.

Weights and Measures, Ordinance 27 of 1902, § 24																																				
Wild Birds, Ordinance 10 of 1893																																				
Wrongful Restraint or Confinement, offences relating to, §§ 339 to 342																																				

XVI.—Table showing the Number of Summary Convictions for various Classes of Offences, and the Kinds of Punishments inflicted, in the Police Courts of the Island during 1901.

XVII.—Return of Inquiries into Deaths held during the Year 1901, showing the Number and Causes of Death.

POLICE.

REPORT OF THE INSPECTOR-GENERAL OF POLICE FOR 1901.

THE authorized strength of the Police Department on the 31st December, 1901, was the Inspector-General, 4 Superintendents, 6 Assistant Superintendents, 27 Inspectors, 9 Sergeant-Majors, 223 Sergeants, 1,479 Constables, 1 Registrar of Servants, 1 Drill Instructor, 1 Chief Clerk, 58 Clerks, 1 Storekeeper, 1 Lock-up Keeper, 4 Magazine-keepers, 10 coolies, and 1 Apothecary, being a total of 1,827.

2. The total cost of the Police for 1901 was Rs. 730,840; it was Rs. 728,125 in 1900. This cost for the Police in Ceylon is a small one compared with that in other colonies, when the population and revenue of Ceylon is taken into consideration.

3. Mr. Holland, the Senior Superintendent of Police, went on leave on the 16th November, 1900, and was absent during the year, Assistant Superintendent Tranchell performing his duties as Headquarter Superintendent.

The death of Mr. Trevena, Assistant Superintendent of Police, from an accident while on leave in England, took place during the year, and Mr. T. Marshall was appointed Assistant Superintendent in his place. Chief Inspector Collette was appointed on the 7th April, 1901, to act as Assistant Superintendent of Police to assist Mr. Thornhill in the Southern Province.

4. During the year 10 sergeants and 14 constables retired on pension or gratuity, 1 sergeant and 45 constables were dismissed, and 59 constables were discharged from the force as being unsuitable for the duties of police officers.

5. Stations in connection with the Prisoners of War were established at Ragama and Kelaniya at the cost of the Imperial Government.

6. Temporary stations for the protection of cacao plantations were also established at Matale, Pallekelle, and Wattegama.

7. I have specially reported to Government on the subject of an increase of pay to the junior sergeants and constables, and it is not necessary or desirable that I should go into the details of the matter in this report. It is a subject that, in my opinion, urgently requires early and careful consideration.

8. It has been more easy to obtain recruits during the latter part of 1901 than it was in 1900 and the earlier part of 1901, but few men of the right stamp presented themselves, and most of those accepted were taken only for want of better men. The benefit of the gymnastic instructor and appliances and physical drill to the physique of the recruits is very apparent and very satisfactory.

9. The improved communication between Ceylon and India is having an effect, which could only be expected, in bringing to Ceylon gangs of criminals who find their temporary absence from India advisable either for their safety or for the better following up of their business. These bands of "depredators" come over twenty to thirty strong, they employ the day in work in the harbour, and the night in thefts and robberies.

10. By such a gang was the attack on the house of Mr. W. E. Grenier made on the 16th December, 1901. This was defeated by the timely arrival of a police patrol of two men, who scared off the sixteen or seventeen men engaged in the breaking into the house, but were not able to arrest them. The attempt to steal the safe of the Austrian Consul Mr. Von Rottauscher was also made by the same gang. They had much larger schemes in view, but they were carefully watched, and were unable to carry them out. Their descriptions were sent to the Police in India, and several of them were found to be wanted by the Indian Police, and were arrested and handed over to them. Having gained no spoil in Ceylon, and found no security from arrest for previous offences, the gang left Ceylon, and will, I trust, act as a discouragement to others of the same sort desiring to explore this Island. Single criminals, however, are certain to find their way backwards and forwards, and constant vigilance and communication with the Indian Police is necessary.

11. The bicycle patrols in Colombo have worked well, especially by night, and these promise to form a useful addition to the police, especially in patrolling those parts of a town which are less thickly populated, and consist chiefly of scattered houses in gardens. These patrols can cover a great deal of ground, they go silently, and they act as a very useful link between other patrols and beats. Such patrols will be useful in other places than Colombo for the patrolling of the outskirts of towns, the roads in planting districts, and any roads which, for any particular cause, require special vigilance by day or night.

12. An attempt on the part of the police to deal with lotteries was not viewed favourably by the Supreme Court, and it is not considered advisable to follow it up at present. The prevalence of gambling of all sorts on the racecourses was, however, more successfully dealt with, and the thanks of the community are due to the Committees and Stewards of race meetings, who gave their support to the suppression of gambling tables and roulette boards.

13. Table B in the Appendix is a summary of Tables A. It gives the number of true cases of cognizable offences, with the commitments and convictions in the Police and Municipal Courts in the Island. The details must be sought for in Tables A.

14. Taking the grand totals of Table B, we find that there were 17,690 true offences committed in 1901. Of these, 12,793 resulted in convictions in the Police Court or committals to higher courts.

15. The true cases and results for the last five years have been :—

	True Offences.	Convictions or Committals.
1897	20,800 ...	... 13,023
1898	15,312 ...	... 10,673
1899	14,434 ...	... 10,173
1900	17,703 ...	... 12,990
1901	17,690 ...	... 12,793

Of the 17,690 true cases, 13,128 appear under the head of "Other Offences," which include statutory offences, breaches of Municipal and other by-laws, and other minor offences, leaving 4,562 cases of what may be considered as crime. The "Other Offences" in 1900 amounted to 13,516, leaving only 4,187 cases of crime, there has therefore been an increase of 375 cases of crime.

16. The following table gives a ready means of comparison of serious crime for the past five years :—

	1897.	1898.	1899.	1900.	1901.
Murder and homicide ...	149	127	125	146	160
Rape	43	38	39	32	36
Robbery ...	498	312	269	289	382
Burglary ...	719	638	977	1,245	1,384
Grievous hurt ...	657	500	371	391	441
Theft of cattle and prædial products ...	1,714	1,076	885	1,119	1,127
	3,780	2,691	2,666	3,222	3,530

The following have been added to the specially named offences, and have only been so recorded for the past three years :—

	1899.	1900.	1901.
Arson	145	98	148
Riot	14	3	10

The convictions in the Superior Courts have increased. They are for the past five years as follows :—

	Supreme Court.	District Court.
1897	449	706
1898	375	763
1899	279	452
1900	328	611
1901	468	646

Of these in 1901, 140 cases were sent to the District Court and 41 cases to the Supreme Court under the Habitual Criminals' Ordinance. These cases would nearly all have been tried in the lower courts had there not been previous convictions of the offenders.

17. In the 160 cases of murder and homicide shown in Table B, 138 cases were committed for trial, of which 128 cases were tried in the Supreme Court. In 96 cases the accused were convicted and 47 persons were sentenced to be hanged, of whom 37 were executed.

18. In 59 of the above cases a knife or some other cutting or stabbing instrument was used; in 1900 such an instrument was used in 62 cases. Clubs were used in 21 cases, compared with 31 cases in 1900. In 27 cases the victims were shot, compared with 25 cases in 1900. I regard the steady increase of shooting cases during the past few years as very serious; whereas in stabbing and clubbing cases there is often no premeditation, and the crime is the result of sudden anger; in shooting cases there is generally a deliberate intention to murder, carried out in some cases by a hired scoundrel instigated by the real murderer, who keeps in the background. It is to be hoped that the new Firearms Ordinance may have a useful effect in preventing firearms from falling into the hands of improper persons, but I fear that the means of obtaining such arms are still too easy for the Ordinance to have much effect.

19. With regard to other special offences dealt with in Table B, robberies have increased by 93 and cases of grievous hurt by 50 in 1901 over the numbers recorded for 1900.

20. House-breaking by night also shows an increase, the number of cases having been 1,384 cases in 1901 and 1,245 cases in 1900. Of these, as I have said before, the majority of cases consist of breaking into a mud hut and removing articles of small value, often for the purpose of annoyance and not for gain. In Colombo, as can be seen in the report of the Superintendent of Police in that town, there has been a further decrease of this offence, the number of cases being in 1899 129 cases and 36 attempts, in 1900 82 cases and 17 attempts, in 1901 71 cases and 22 attempts. Of those in 1901, 41 cases and 11 attempts were in third class houses, 18 cases and 9 attempts in second class houses, and 12 cases and 2 attempts in first class houses.

21. The decrease in Colombo I attribute to the improved system of patrols, which have been to some extent substituted for beats. The patrols cover much more ground, they are irregular and cannot be watched by the intending burglar as can a beat constable, their routes being changed every night, and they form a valuable means of checking the beat constables. On the other hand, the decrease of beats has the disadvantage of decreasing the number of constables within call of the inhabitants of the principal roads and streets. This latter disadvantage is not great in reality, because Colombo has such numerous police stations that in few localities has a resident far to go to obtain help from a station.

22. Thefts of cattle and prædial products are practically the same as in 1900. There were 1,010 cases of theft of cattle, with 273 convictions, but in many of these cases the loser compounded with the thief and recovered his cattle, suppressing all evidence. There were 117 cases of theft of prædial products, with 67 convictions.

23. For minor offences there were 10,793 convictions for 13,128 cases, including 136 convictions for 204 breaches of Ordinance No. 3 of 1897 (Prevention of Plague).

Western Province.

24. In this Province, as shown by Table B, there has been an increase in murders and homicides and a slight increase in cases of grievous hurt, but the number of convictions for these offences is satisfactory. There has been some decrease in cases of house-breaking by night and of theft of cattle and prædial products.

The new police station at Negombo was handed over to and occupied by the Police, and is a great improvement on the old building, which has been transferred to the Prison Department as quarters for officers.

The question of the police protection of the suburbs of Colombo outside Municipal and Police limits is one that requires attention. These suburbs have increased greatly of late years, and not only do they require better protection and maintenance of order than exist at present, but the want of this seriously affects the safety of property in Colombo. I am myself disposed to think that the Police limits of Colombo should be enlarged to include the more populous suburbs, especially on the south side of Colombo; but if this is done, there must be a proportionate increase of the Colombo Division of Police, an increase probably much greater than could be covered by any police rate on the newly-included localities.

Additional assistance has been given in the Police Office, and the work can be now properly dealt with.

Rewards from the Reward Fund to police officers in this division amounted to Rs. 167·50.

Central Province.

25. There has been a slight increase in murders and homicides in the Central Province, but a conviction or committal was the result of 16 out of 19 cases, which is satisfactory. There has been an increase in cases of house-breaking by night and a decrease in cases of grievous hurt and thefts of cattle and prædial products.

The new police station at Dimbula was nearly completed during 1901, and a commencement was made with that at Agrapatana. The much-needed bathing-house in the Kandy barracks has been built.

Stations for the protection of cacoa estates from theft were established at Matale, Pallekelle, and Wattegama. Theft from those estates which availed themselves of this protection was reduced to a very small amount. The Government Agent of the Central Province has informed me that he will deal with this question in his report.

Rs. 140 was awarded to police officers in this division from the Reward Fund.

Northern Province.

26. Murders and homicides in this division show a marked decrease from 10 in 1900 to 4 in 1901; in all 4 cases the accused were committed for trial in the Supreme Court. The police in this Province have maintained their reputation for smartness and efficiency.

Rewards amounting to Rs. 165 were paid to members of the force for specially good service.

Southern Province.

27. In the Southern Province there were 30 cases of murder and homicide; there were 22 in 1900. There were 29 committals in these cases. Cases of grievous hurt and robberies have slightly increased. There is an increase in house-breaking by night and theft of cattle and prædial products. There is a marked decrease in minor offences.

There was a disturbance at Ambalangoda in connection with the collection of the sanitary rate, which was dealt with efficiently by the Government Agent with the assistance of the police. A punitive police force was placed at Ambalangoda, and was still there at the end of 1901.

Rewards amounting to Rs. 312·50 were paid to members of the force from the Reward Fund.

Eastern Province.

28. The return of crime in this Province is, as usual, very small. There were two quarrels, resulting in each case in the death of one of the persons concerned, but in both cases the accused were acquitted.

There was also a suspicious death, but the inquiry failed to discover any justification for the charge against the person accused and he was discharged. No further comment on crime in this Province beyond noticing its small amount appears to be necessary.

Punitive police stations were established at Nochchimunai and Navatkuda in consequence of disturbance.

Provision for the new police station and barracks at Batticaloa was made in the Estimates, but the work has not yet been commenced. Rs. 5 were awarded to police officers in the division from the Reward Fund.

North-Western Province.

29. Murders and homicides in this Province have slightly increased from 21 in 1900 to 25 in 1901. In the 25 cases there were 18 committals. There is no great change in the return for other serious crime; minor offences, including offences against Sanitary and Local Board by-laws, have increased.

The Government Agent considers that an Assistant Superintendent of Police is required in this Province, and I agree with him. There was formerly such an officer in the division, but the

Government Agent at that time in charge of the Province did not make great use of his services, and he was removed to a division where he would be more actively employed.

Rs. 2 from the Reward Fund were awarded to police officers in this Province.

North-Central Province.

30. As usual, the return of crime for this Province is very small. The work in the Identifying Office is not much, but I consider it advisable that the office should be retained as a preventive measure.

Rs. 20 were awarded to members of this police force from the Reward Fund.

Province of Uva.

31. There is no marked change in the crime in this Province for the year 1901. Robbery and grievous hurt have increased, but have reached no very serious proportions. Minor offences have also increased.

A new police station and quarters at Bandarawela have been completed and occupied by the police. Police stations at Haputale, Welimada, and Diyatalawa have been maintained at the cost of the Imperial Government in connection with the Camp for Prisoners of War at Diyatalawa.

Rs. 37·50 were awarded to police officers of this division from the Reward Fund.

Province of Sabaragamuwa.

32. There is a most satisfactory decrease of murders and homicides and of cases of grievous hurt in this Province, chiefly in Kegalla, which is the most criminal part of the Province.

The question of the removal of the regular police from Balangoda was again raised, but I am convinced that this would not be a wise measure. Balangoda on Saturdays and Sundays is crowded with estate coolies, and the rural police headmen are not able to deal with this class.

Rs. 45 were awarded to police officers of the division from the Reward Fund.

Colombo.

33. Mr. Byrde, the Superintendent of Police in Colombo, gives a full and most useful report for the year 1901, which I attach. It deals carefully with crime and offences in the capital of the Island.

There were 3 cases of murder and 4 of homicide during the year; in one case of murder the accused was convicted and suffered the extreme penalty of the law; in the other two, though there was strong circumstantial evidence against the accused, they were acquitted in the Supreme Court.

There is a satisfactory decrease in real crime as compared with last year, which also compared favourably with the previous year. House-breaking by night again shows a decrease, but I have dealt before with this. The improvement is, as I have said before, greatly due to the improved system of night protection.

The bicycle patrols have also done useful work, and it will be well to increase them; a bicycle patrol of two men certainly does the work of four men, and the silence and swiftness with which they move are of great advantage. I again refer to Mr. Byrde's report with regard to the patrols.

The regulation of the carriages and jinrickshas and the prevention of the molesting of passengers by the numerous loafers and boys who hang about the Fort and its neighbourhood have received careful attention.

The former is at present exceedingly difficult, because, though the vehicles have to be licensed, the drivers of carriages and the drawers of jinrickshas require no license. Any one can be put up to drive a hired carriage, and no qualification as to knowledge of driving, knowledge of the rule of the road, or Municipal regulations, or character are required. The same absence of all necessity for qualification exists with regard to drawers of jinrickshas, who, in view of the confidence often placed in them, should at least be required to have fair characters.

A set of rules for the licensing of drivers of carriages for hire has been drafted by the police and adopted by the Municipal Council, and it is hoped that these will soon be approved as Municipal by-laws, when a great improvement in the present state of affairs may be hoped for. A set of rules for the drawers of jinrickshas will probably soon follow that for drivers of carriages for hire.

With regard to the molesting of passengers, there were during the year 472 prosecutions, resulting in 425 convictions. It is found to be exceedingly difficult to protect the passenger against the result of his own folly or that of his fellow passengers. Some of the more foolish of these throw away money on all sides on the worthless loafers who appear to have some attraction for them, though what it may be it is difficult to conjecture, and an occasional fine has no deterrent effect on the vagabond, who merely considers it a small set-off against the rich harvest he reaps. The European constables and the native police especially detailed for the duty, as a rule, do their best, but they cannot be everywhere, and the loafer is an adept in dodging them.

People of this class who have repeated convictions are now brought under the operation of the Vagrant Act, and it is to be hoped that sentences of imprisonment will have more effect than small fines.

Provision was made for a new station and police quarters in Modara, and a good site has been secured. The work, however, has been postponed, but I trust that it may be put in hand next year. There is great necessity for this provision for the protection of this part of the Kotahena division, and the necessity increases as the docks progress. When the docks are completed and work on ships is being done, this neighbourhood will be a busy and important part of Colombo, with probably many European residents, and efficient police protection will be a necessity.

The question of the policing of the suburbs of Colombo outside limits I have mentioned before. It is an important question, and one that must be dealt with very soon, as Colombo now suffers considerably from the unsatisfactory state of affairs just outside the limits.

There has been a great improvement in the working of the Depôt and the training of the recruits, due to the careful supervision of Mr. Byrde and Mr. Bowes, and to the very efficient manner in which Inspector Morris, formerly a Colour-Sergeant in the Duke of Cornwall's Light Infantry, performs his duty.

34. Table C deals with the work done in the identification offices throughout the Island. This work is specially placed under the Superintendent of Police, Colombo, in whose division is the central office.

35. 5,982 persons charged with a crime as defined in the Habitual Criminals' Ordinance were brought to the offices for identification, or measured in the prisons by the police identifying officers. In 1900 there were 4,762. Of these, 939 were found to have been previously convicted. There were 938 in 1900, and 181 were sent for trial to a higher court, 167 were so dealt with in 1900. There were 160 criminals under sentence of police supervision, of whom 31, at some time during their sentence, failed to report themselves. Of these, 19 were arrested and punished by the Police Courts. Only 24 persons were convicted of a crime committed while under police supervision.

36. Ninety-six convicted prisoners were at large on license, of whom 18 failed at one time or another to report themselves. Eleven of these were arrested and punished, the license being forfeited in some cases. Only 6 persons were convicted of a crime committed while at large on license.

37. The Bertillon system of identification by measurement has now been in operation for over six years in Ceylon, and it has worked most satisfactorily. The measurers are carefully trained for two or three months, and the measurements are consequently taken with great care and accuracy; I can only recall two or three instances in which the measurements have been found to be faulty. Given accurate measurement the system is infallible, and no single case has occurred in which a wrong man has been produced by the measurers, in fact such a thing is almost impossible. In spite, therefore, of the prejudice which may exist in the minds of many judicial officers against accepting the measurements as proofs, there is no doubt that they are far surer proofs than the memory of a police or prison officer. Besides, the man being once found by his measurements, his body marks, as a rule, are sufficient identification in themselves. The system has, indeed, made such an advance in the methods of dealing with the habitual criminal that its effects, if slow at first, must be most beneficial as a deterrent of crime.

38. The registration of servants continues to be useful. A separate office has now been opened in Nuwara Eliya for the convenience of residents in that place. Table D in the Appendix gives a record of the year's work.

39. I desire, in conclusion of my report, to thank the Government Agents for their cordial co-operation in what is sometimes called the dual system of control of the police, but which, worked properly and sensibly, has in fact no such duality. I desire also to record my opinion of the excellent work done by Mr. R. W. Byrde in Colombo and by the officers under him. I have also to thank Mr. C. L. Tranchell for his valuable assistance and hard work in the Headquarter Office.

Colombo, May 17, 1902.

L. F. KNOLLYS,
Inspector-General of Police.

REPORT BY THE SUPERINTENDENT OF POLICE, COLOMBO, FOR 1901.

THE total number of cognizable cases instituted in the Police Court, the Additional Police Court, the Municipal Court, and the Joint Police Court for offences committed within Colombo during the year amounted in all to 8,373. Of these, 846 are classified under the following heads:—

(*a*)	Cases of a civil nature in which the accusation has been made under a misapprehension of law or fact, and cases in which it has not been established that any criminal offence has been committed	552
(*b*)	Cases which appear designedly false, and in which no offence has been committed ...	293
(*c*)	Cases in which the offence was not within the jurisdiction of the court ...	1

The majority of the remaining cases to the number of 6,870 consisted of purely statutory and Municipal offences, *e.g.*, drunk and disorderly, molestation of passengers, gambling, misuse of water, &c.

The figures for real crime committed stand as low as 657.

Table I.

Year.	Classed under A, B, and C.	Statutory Offences actually committed.	Real Crime actually committed.	Grand Total.
1901 ...	846 ...	6,870 ...	657 ...	8,373
1900 ...	862 ...	6,291 ...	761 ...	7,914

This table, which gives a comparative statement of the cognizable offences for the years 1900 and 1901, shows a greater improvement over the figures of 1900 than even the figures of 1900 showed over those for 1899. It very forcibly demonstrates the fact that crime has been rapidly on the decrease in Colombo. This result is without question due to many extrinsic causes, but among them may undoubtedly be reckoned the increased efficiency of the police force. The figures for the prosecution of statutory and Municipal offences, which exceed those for 1899 by 2,231, are a standing testimony to the increased energy and supervision exercised by the Inspectors in their respective divisions.

Total ...	126	33	120	30	113	36	105	42	464	141	30·38

This table is a comparative statement of the prosecutions with their results with regard to offences respecting the unlawful handling of other person's property for the relative quarters of 1900 and 1901. It is to be noted that this class of crime has diminished, while the percentage of convictions has increased.

This table sets forth the cases relating to offences arising from criminal entry upon property in the occupation or possession of another.

House-breaking again shows a decrease. In 1899 there were 130 cases, in 1900 86 cases, in 1901 73. The greatest reduction has been in the southern district, which comprises Kollupitiya (with the subdivisions Wellawatta and Cinnamon Gardens), Slave Island, and Maradana (with the subdivisions Borella and Kolonnawa). In this district, which is the chief residential portion of Colombo, house-breakings have been reduced from 44 in 1900 to 28 in 1901. In the northern district, the Pettah

Division shows a similarly satisfactory reduction from 21 to 9. The one black spot in the Province is the Kotahena Division, in which there has been an increase from 14 cases in 1900 to 29 cases. The majority of these cases is in connection with third class houses, the walls, doors, and shutters of which are extremely insecure. The division is a large and straggling one, ill-lighted, with the houses standing far back from the road and hidden from the beats by intervening foliage.

Two startling cases occurred in the southern district in the month of December, the one was a case at No. 3, Gregory road, when the house of the Austrian Consul was entered and a safe removed to the garden, the other was a case in Havelock Town, in which the house of Mr. Grenier of the Railway Extension Office was forcibly entered and a despatch box and a musical box (both of which were subsequently recovered) removed. Both of these were Indian gang robberies, the house-breakers belonging to a band of depredators who had come over from Tuticorin and the neighbouring districts. In neither case did they succeed in securing any profitable booty. The movements of the band were carefully watched and further mischief prevented. It was subsequently broken up, several of the members being arrested by our police and taken back to India by officers of the Indian Police after identification for offences committed there. A very similar invasion of Indian criminals was made in July and August when money and bag robberies to the number of 7 occurred in the Fort. The Fort police were equal to the occasion, and by clever detections secured the conviction of seven offenders, who received sentences of rigorous imprisonment. Their punishment put an immediate stop to these offences.

In 14 cases of the 53 cases of undetected house-breaking by night there was no property stolen, in 16 cases there was contributory negligence on the part of the householder.

Action was taken by the police in all the 21 cases of persons being found in a building for an unlawful purpose and failing to give a satisfactory account of themselves, under section 450, Ceylon Penal Code. Each case resulted in a conviction. In three of them the accused had been previously convicted.

Two of the main factors in the prevention of crime against property have been (1) the improved lighting of the southern district by the Municipality, and (2) the improvement and extension of the police patrols.

It is found that at night a system of patrols in conjunction with the beats is far more effective than one consisting of beat constables alone. The patrols are sent out from their station between 11 and 12 along a prescribed route with orders to visit certain checking stations. This necessitates their being constantly on the move and prevents their retiring to a quiet corner and sleeping, as the solitary beat constable is often tempted to do. The fact of there being two of them together in the case of an emergency gives them greater courage, in addition to greater physical force. The beat constable, on the other hand, is powerless to cope with more than one offender at a time, and is too often a prey to fear and not infrequently to superstition.

During the course of the year the bicycle patrols have been started. There are two patrols, each consisting of two men, working along routes which are varied nightly. During the course of their rounds they cover a distance of from 10 to 15 miles. They have the advantage of rapid and silent movement, and have shown every promise of becoming a very useful and effective arm of the force.

The divisional and round patrols have been further strengthened by the inauguration of the headquarter patrols. Each of these patrols consists of some five or six recruits, under the guidance and command of an experienced sergeant. They are sent out at least once a week, and, in addition to acting as a preventive against crime, afford excellent training and experience for the recruits.

In all divisions the beats and patrols are supervised directly by section sergeants. Each Inspector makes at least two night rounds in his division weekly, and each Assistant Superintendent at least one in his district. In addition to this, whenever possible a special Inspector in general charge of the patrols is told off to make nightly rounds on a bicycle. A constant supervision of the men at night is thus ensured. All constables found asleep on beat or guilty of any negligence are charged at the Superintendent's orderly room and are severely dealt with. Repeated offences of this nature inevitably lead to the dismissal of the offender by the Inspector-General.

The results are even more satisfactory when it is considered that during the year the force in Colombo has been considerably below its usual number owing to the necessity of the establishment of punitive police forces in other parts of the Island. This has necessitated a drain upon the Island reserve, which is otherwise, as a rule, available for duty in Colombo.

The advice to householders contained in the report of 1900 will bear reiteration: "Keep dogs inside your houses, register your servants, see to it yourself that your bars, bolts, and windows are all properly secured."

A tabulated statement of the total number of offences against property, with results:—

Table IV.

Offences.	No. of Cases.	Convictions and Committals.	Percentage of Successful Cases.
1901.			
Theft and kindred offences	373	136	36·46
House-breaking and kindred offences ...	146	52	35·61
Forgery, &c.	25	8	32·00
Total ...	544	196	36·02
1900.			
Theft and kindred offences	464	141	30·38
House-breaking and kindred offences ...	138	50	36·23
Forgery, &c.	13	6	46·15
Total ...	615	197	32·03

N.B.—Thefts of property under Rs. 20 are not included in this statement.

This tabulated statement of the number of offences against property shows a considerable decrease in the commissions, and a very satisfactory increase in the percentage of convictions and committals.

Table V.

	—	4	1	6	2	93	106	
Section 302, Attempt to commit suicide ...	2	—	—	1	—	4	7	
Total ...	—	—	—	—	—	97	113	87·73

The total number of offences against persons is 106, as against 136 in 1900 and 119 in 1899; the percentage of convictions is 87·73, while that in 1900 was 83·82.

There have been 11 cases of suicide and 7 attempts, as against 12 cases and 10 attempts in 1900.

The return shows five committals for murder. The cases of actual murder committed during the year are only three in number.

The first case occurred on New Year's Day at College street, Kotahena: one Amarissa was found lying dead with a gash across his abdomen, two knives were found near the corpse. The evidence was purely circumstantial, there being no eye-witnesses to the deed. One Migel Appu was placed upon his trial, but was acquitted.

The second was the Lovell case. Mr. Lovell of the Peninsular and Oriental Company died on the 12th January from what the medical authorities believed to be ptomaine poisoning. A post-mortem examination and an analysis revealed the fact that he had been poisoned by arsenic. There can be little doubt that the poison was administered by some person with the intention of causing

his death. Several arrests were made and evidence gathered, which subsequently led to two of the servants being put on their trial for murder. The case was heard before the Commissioner of Assize and resulted in acquittal.

The third case was an act of wanton brutality. A Sinhalese man by the name of Podi Sinno residing at College street kept a mistress Karlinahamy, a woman of forty years of age. He subjected her to such ill-treatment that she left him. He followed her, and on the 4th October stabbed her fatally with a knife. He was found guilty of murder, and sentenced to the extreme penalty of the law.

Of the other two cases, one belongs to the year 1900, and the facts have been stated in the report for that year. The accused Robert Ratnayaka was found guilty of culpable homicide not amounting to murder and for voluntarily causing grievous hurt. For these offences he was sentenced to terms of ten years' and two years' rigorous imprisonment, respectively.

The last case occurred in the Pettah. A woman called Selestinahamy abused her husband for an intrigue with another woman. He threw an arecanut cutter at her and caused a fracture of the skull, from which she died. The accused, who was committed for murder, was found guilty of having voluntarily caused grievous hurt, and was sentenced to three years' rigorous imprisonment.

The cases instituted for unlawful gaming, 109 in all, have produced very excellent results, as much as Rs. 1,650 having been imposed by way of fines. From these fines the Police Reward Fund has been augmented by Rs. 825.

The prosecution of lotteries was also taken in hand, but the attitude of the courts was such as to discountenance the institution of further cases, and to render the effect of such prosecutions negatory.

Under the head of Statutory Offences, there have been 99 cases in which the accused have not been arrested and produced before the court. The figures are identical with those of the preceding year. With regard to criminal cases, there have been only 50 absconders unarrested, as against 82 in 1900.

The crusade against the molesters of passengers has gone steadily forward. The number of prosecutions reached 472, with 425 convictions, the fines varying from Rs. 2 to Rs. 10. Under other clauses of the Vagrant Ordinance there have been 1,182 prosecutions, with 1,081 convictions.

There are now registered, as defined under the Ordinance, in Colombo 1,037 "idle and disorderly persons," 29 "rogues," and 15 "incorrigible rogues." The Municipal Court is at last inflicting sentences of rigorous imprisonment on persons of this latter class. In the Fort there are 251 "idle and disorderly persons," 17 "rogues," and 9 "incorrigible rogues." It is this band which preys upon the passengers who land in Colombo. The nuisance has been greatly reduced, but still exists. The only remedy lies in a steady perseverance and a rigid enforcement of the provisions of the Vagrant Ordinance.

The ricksha coolies and carriage drivers still continue to be unlicensed. Many of the former are men of the criminal class, and consequently a standing source of danger. The greater number of the latter are incompetents. It is hoped that measures will eventually be taken to provide a system of registration for such persons and to subject them to examination before the grant of a license. A set of rules under the Municipal Ordinance has since been passed by the Municipal Council for the licensing of carriage drivers, which, it is hoped, will be useful.

The regulation of traffic, especially in the Fort, has received special attention. The law as at present existing is quite inadequate on the subject, and steps are being taken to bring in rules which will be more comprehensive. These rules have been passed in the Municipal Council, and only await the approval of Government. In the narrower parts of Maradana, Pettah, and Kotahena, where the double tram line runs, all rules are however useless, and traffic must ever remain in a congested and confused state.

The identification and registration of criminals has been carried on with admirable results. There have been no cases of faulty measurement. Of 877 persons brought from the various police stations in Colombo for identification, 178 were found to have previous convictions, and were consequently committed for trial before the higher courts.

The effective supervision of the habitual criminals and the suspicious characters has been a powerful agent in the prevention and suppression of crime, as shown by the returns. The following are the statistics :—

	Particulars.	No.
1 ...	Number of habitual criminals under police supervision by sentence of a court in Colombo town during the year 1901	56
2 ...	Number of habitual criminals at large on license in Colombo town during the year 1901	39
3 ...	Number of habitual criminals included in column 1, who failed to report themselves and were prosecuted.	5
4 ...	Number of habitual criminals included in column 1, who failed to report themselves and were not traced	5*
5 ...	Number of habitual criminals included in column 2, who failed to report themselves and were prosecuted	2
6 ...	Number of habitual criminals included in column 2, who failed to report themselves and were not traced	3†
7 ...	Number of habitual criminals re-convicted during the year 1901 ...	109

* One arrested since December 31, 1901. † One arrested since December 31, 1901.

There were only two fires of importance. In the one the store of Messrs. Baker & Hall at Kotahena took fire, when a quantity of tea shooks and fibre was destroyed. In the other the fibre in a store in Dean's road belonging to Mr. Vanderspar ignited and caused considerable loss. In both instances the police were early on the scene, and rendered valuable assistance in getting the fire under and in saving property.

The duties of the police with regard to the Boer prisoners still continue. The Harbour Police furnished guard boats to keep watch alongside the steamship "Catalonia" and the steamship "Atlantian" while she was in use as a hospital ship. Guards have also been furnished for the Borella Convict Hospital and the General Hospital to keep a watch over the invalid prisoners of war. A supervision has been exercised, too, over the movements of the prisoners of war on parole.

The most interesting case of the year has been the Orient Company theft case. On Thursday night, 4th April, the day preceding Good Friday, George Brohier, head clerk of the Orient Company,

with the assistance of Owen Joseph and Anthony, peon, by the means of false keys, entered the office of the Company in the Chamber of Commerce buildings and abstracted a sum of Rs. 12,000 from the safe and cash box, which were carefully locked again. The larger part of the stolen money was removed by Owen Joseph and his wife to Nuwara Eliya, where it was secreted in the house of a relative, one Walter Don. Working from clue to clue the police eventually succeeded in getting convictions against Brohier for six years, against Don for two years, against Owen Joseph for two years, and against Mrs. Joseph for six months (simple imprisonment). A sum of Rs. 6,300 was also recovered. Anthony, peon, died before he could be brought before the courts.

On information received from the Straits, Mr. Marshall, Assistant Superintendent of Police of the Northern Division, succeeded in making a seizure at the Customs of dollar notes to the value of $257,940, which had been stolen from the Hongkong and Shanghai Bank at Singapore. This successful seizure was the main proof which led to the subsequent conviction of the thieves at Singapore.

The Harbour Police have performed their duties in a quiet and unostentatious manner. The old police ship has been discontinued as a station-house, the former hospital ship having taken its place. A new port rule insisting on the lowering of two gangway ladders on the arrival of mail ships in port has helped to relieve the congestion, which was the natural result of all boats attempting to crowd to one gangway.

The Colombo Police Force has been strengthened by the appointment of Inspector Elstone to the Fort Division, of Inspector Jonklaas to the Kollupitiya Division, and of Inspector Morris to Headquarters, in place of other officers.

Inspector Elstone, who has acquired invaluable experience elsewhere, has done very sound and conscientious work in the Fort. Owing to his influence there has been a very marked improvement in the *morale* and discipline of the men of this division.

Inspector Morris (late Colour-Sergeant of the Duke of Cornwall's Light Infantry) is another acquisition to the force. He has been placed in charge of Headquarters and the Depôt. The Depôt constitutes the nursery of the force, and the making of the force depends on the training which the recruit receives. Since his appointment there has been a great improvement in the drill, discipline, and *esprit de corps* of the recruits. Drilling has been taught systematically by a gradation through five squads, the men of the first squad coming under the immediate supervision of a Drill Instructor from the Gloucester Regiment. After a recruit has passed in drill, he is put through a course of musketry lasting about fourteen days, and terminating with a course of firing on the Hunupitiya range. To further improve the physique of the men a set of gymnastic appliances has been obtained, and each recruit has to go through a course under the supervision of a competent instructor. The Inspector-General, in order to encourage gymnastics throughout the force, has offered prizes for competition.

Special hours are fixed for daily lectures, at which the recruits receive instruction as to the duties to be performed by them in the police. Preparatory to the progressed recruit being sent out to a Province, this oral instruction is supplemented by actual experience on supernumerary beat duty under the supervision of a senior police officer and by attendance in the Police Court.

The attendance at the police school has not been as large as might possibly be expected, but the men who do attend are regular, and are profiting by the tuition. Quarterly prizes for attendance and half-yearly prizes for competition are now being given.

These improvements, which have been introduced during the course of the year, are already having, and must in the future have, a very beneficial effect upon the force.

This report cannot close without a reference to the two great historical events of the year :—

(1) The death of Queen Victoria.
(2) The visit of the Duke and Duchess of Cornwall and York.

It is an assured fact that in the Oriental mind our Queen was regarded as a deified personage. To many it was incredible to hear that she was but mortal. In evidence of this must be placed on record a pathetic entry which was made by a Malay Sergeant in the Fort Information Book on his receiving the news of her death. It runs as follows :—

Death of the Queen.

(On receiving the above message printed by the "Times of Ceylon.")

On hearing this I am unable to hold my pen because of "Our God of the Worlds" death."

On Saturday, 26th January, the Proclamation of the accession of King Edward VII. was read in front of Queen's House, the ground being kept by the police.

On Saturday, 2nd February, a memorial service was held at St. Peter's Church, Fort, which was followed by a memorial mass meeting on the Galle Face. Never before was there such a gathering : people streamed in from all sides till at last the green became a living sea of heads. There were there men of every creed and every nation, West and East, bound together by one bond of mutual sympathy, meeting in one universal sorrow. In spite of the thousands assembled, the duties of the police were light, for never was a crowd more orderly ; quietly it met ; quietly it dispersed ; not a single report reached me of one single act of disorderly behaviour.

On Friday, 12th April, Their Royal Highnesses the Duke and Duchess of Cornwall and York landed in Colombo, proceeding to Kandy the same day. They returned on Monday, the 15th April, and between 5 and 6.30 P.M. drove along a prescribed route, through the Fort, Pettah, Slave Island, Cinnamon Gardens, Wellawatta, and Kollupitiya Divisions. That night a reception was held at Queen's House, followed by illuminations and the Royal embarkation. On the morning of Tuesday, the 16th, the "Ophir," with its escort consisting of H.M.S. Highflyer, H.M.S. Pomone, H.M.S. St. George, and H.M.S. Juno, left for Singapore. The fact that the police ably discharged the responsible duties entrusted to them is testified to in the letter of Lieutenant-Colonel Sir Arthur Bigge, Private Secretary to His Royal Highness the Duke of Cornwall and York, addressed to His Excellency the Governor, in which it is stated : "His Royal Highness noticed with much satisfaction the admirable manner in which the police duties were performed, and he asks that his thanks may be conveyed to Major Knollys and those serving under him."

R. W. BYRDE,
Superintendent of Police, Colombo.

Colombo, March 22, 1902.

APPENDIX.

A 1.—Summary of Cognizable Offences disposed of by Police Courts of the Island during 1901.

N.B.—A. Cases of a civil nature or cases in which the accusation has been made under a misapprehension of law or fact come under this head; also cases in which it has not been established that an offence has been committed. In the latter case this letter is not used unless the facts connected with the commission of the alleged offence have been thoroughly investigated.
B. The case appears to have been designedly false; no offence committed.
C. Offence not within the jurisdiction of the court.
D. Committed to District Court.
E. Committed to Supreme Court.
F. True.—*a* Accused dead or insane.
b Accused absconded and cannot be arrested.
c Compounded under section 355, as amended by Ordinances Nos. 5 of 1886 and 22 of 1890.
d Evidence insufficient to convict any one.
e Offender unknown.
f Convicted, Police Court.
c = Cases.

Number of Offences in Breach of— [Unless otherwise stated the Sections are those of the *Ceylon Penal Code.*]	A.	B.	C.	D.	E.	F.						Grand Total.	Nature of Offence.

A 3.—Summary of Cognizable Offences disposed of by the District Courts of the Island during 1901.

N.B.—A. Cases of a civil nature or cases in which the accusation has been made under a misapprehension of law or fact come under this head; also cases in which it has not been established that an offence has been committed. In the latter case this letter is not used unless the facts connected with the commission of the alleged offence have been thoroughly investigated.

B. The case appears to have been designedly false; no offence committed.

C. Offence not within the jurisdiction of the court.

F. True.—*a* Accused dead or insane.
b Accused absconded and cannot be arrested.
c Compounded under section 355, as amended by Ordinances 5 of 1886 and 22 of 1890.
d Evidence insufficient to convict any one.
e Offender unknown.
f Convicted.
c = Cases.

A 5.—Summary of Cognizable Offences disposed of by the Supreme Courts during 1901.

N.B.—A. Cases of a civil nature or cases in which the accusation has been made under a misapprehension of law or fact come under this head; also cases in which it has not been established that an offence has been committed. In the latter case this letter is not used unless the facts connected with the commission of the alleged offence have been thoroughly investigated.

B. The case appears to have been designedly false; no offence committed.

C. Offence not within the jurisdiction of the court.

F. True.—*a* Accused dead or insane.
b Accused absconded and cannot be arrested.
c Compounded under section 355, as amended by Ordinances 5 of 1886 and 22 of 1890.
d Evidence insufficient to convict any one.
e Offender unknown.
f Convicted.

C = Cases.

H.—Recruiting at Headquarters.

DURING 1901 236 recruits were enlisted. Of these, 101 were Sinhalese, 40 Tamils, 43 Malays, 10 Moors, 24 Bengalese, 1 Kaffir, 15 Burghers, and 2 Eurasians.

2. Of the number enlisted, 22 were specials over 25 years of age or under 19, 24 were specials under 5 ft. 3 in. in height; of them 95 were Sinhalese of the Goigama or Vellala caste and 6 Karawa.

3. Of the 40 Tamils, 38 were of the Vellala caste, 1 Naican, and 1 Canadier.

4. All enlisted produced certificates of good character.

5. Of 236 recruits, 40 per cent. possessed a "good knowledge of English" in speaking, while 30 per cent. possessed "a good knowledge" in writing, while 50 per cent. of the rest were able to speak and write fairly well.

6. Beside these, there were 9 Europeans (Colombo Division) and 6 natives (Harbour Police) enlisted by the Superintendent of Police, Colombo :—

§ Discharged November 7, 1901.

PRISONS.

REPORT OF THE INSPECTOR-GENERAL OF PRISONS FOR 1901.

THERE has been some increase in the total number of admissions of convicted prisoners to the prisons in Ceylon during the past year.

2. Excluding defaulters under the Road Ordinance, who must be dealt with separately, the totals of admissions of convicted prisoners to the prisons for the last ten years have been—

1892	...	6,638	1897	...	7,001
1893	...	6,795	1898	...	7,051
1894	...	6,141	1899	...	6,158
1895	...	5,498	1900	...	6,000
1896	...	5,288	1901	...	6,581

the increase of population being, by the Census of 1891 and that of 1901, 577,899.

3. The admissions to prison of defaulters under the Road Ordinance, who complete the prison population of convicted prisoners, for the same periods have been—

1892	...	2,185	1897	...	500
1893	...	1,127	1898	...	379
1894	...	826	1899	...	329
1895	...	744	1900	...	260
1896	...	648	1901	...	354

4. Though there is a slight increase over the two previous years, this last table is satisfactory, and is a proof of the better working of the Road Ordinance. Very few men now evade the tax, and one of the greatest objections to the tax, namely, the number of men whom it caused to be imprisoned, has been removed.

5. Of the total admissions of convicted prisoners to prisons, the following figures give those from the Superior Courts for the same periods :—

1892	...	789	1897	...	1,155
1893	...	655	1898	...	1,138
1894	...	859	1899	...	731
1895	...	614	1900	...	939
1896	...	854	1901	...	1,114

There has therefore been an increase over last year of those convicted for serious offences of 175.

6. There is an increase in convictions for murder and manslaughter. The numbers of the last ten years are as follows :—

1892	...	58	1897	...	88
1893	...	50	1898	...	58
1894	...	82	1899	...	71
1895	...	75	1900	...	82
1896	...	62	1901	...	101

The number of men sentenced to death and of those whose capital sentences were carried out are as follows :—

		Sentenced to Death.		Hanged.			Sentenced to Death.		Hanged.
1892	...	26	...	16	1897	...	40	...	20
1893	...	23	...	12	1898	...	28	...	19
1894	...	43	...	23	1899	...	27	...	21
1895	...	26	...	22	1900	...	51	...	32
1896	...	37	...	25	1901	...	47	...	37

The number of those sentenced to death is therefore slightly less than in 1900, but the number actually executed is greater.

7. It is very difficult to make any conjecture as to the cause of the prevalence of the crime of murder. The offenders do not, as a rule, belong to the criminal class, many of them being men who have up to the time of the crime led a comparatively blameless life. The frequency of the crime appears to be due to an absolute want of self-control, and to a total want of appreciation of the value of human life.

8. It appears to me that this last applies to the life of the offender as it does to the life of the victim, and that the absence of dread of the death penalty makes the crime so difficult to deal with in Ceylon.

9. I have observed the effect of the time passed between sentence and execution in Ceylon and compared it with what I have seen elsewhere. The native of Ceylon, and especially the Sinhalese, as a rule, appears to be little affected by his position: he does not lose his appetite or his interest in ordinary matters, and he will, within a day or two of his death, appear to be more concerned about the quality of the rice supplied to him than by the shameful end which he is approaching. Quite at the last only does he appear to realize his awful position. If, then, anticipation of the death penalty has no terrors, that penalty, which in most other countries is the most deterrent, loses its effect in Ceylon.

10. It is a somewhat remarkable fact that out of 37 persons executed during 1901 35 were Buddhists, the other 2 being Mohammedans.

11. Convictions for aggravated assaults, the kindred offence of murder and manslaughter, have increased. The figures for the last ten years are as follows:—

1892	...	250	1897	...	303
1893	...	154	1898	...	350
1894	...	207	1899	...	191
1895	...	143	1900	...	205
1896	...	264	1901	...	286

The following tables for the last ten years recapitulate what I have given above:—

No. 1.—Total Number of Convicted Prisoners committed to Prison from all Courts, and their Daily Average.

	1892.	1893.	1894.	1895.	1896.	1897.	1898.	1899.	1900.	1901.

Kegalla ...	17	16	3	8	—	—	14	8	—	—	—	—
	33	40	10	22	—	—	23	18	1	—	—	—
Total of all Jails ...	260	354	107	179	1	2	152	173	10	8	2	—

12. In Table No. 2 it will be noticed that out of the 354 who were admitted to prison under the Road Ordinance, only 165 actually served their sentences, 179 having paid their fine, 2 having been discharged as the committals were informal, and 8 having been discharged on medical certificate.

13. Table No. 3 gives the number of escapes from the prisons and recaptures during the past ten years, and is as follows :—

Year.	Escapes.	Recaptures.	Year.	Escapes.	Recaptures.
1892 ...	31	29	1897 ...	13	12
1893 ...	18	18	1898 ...	10	10
1894 ...	5	6	1899 ...	8	8
1895 ...	11	13	1900 ...	1	1
1896 ...	9	8	1901 ...	2	2

Many of the prisons in the Island are still very unsafe places of confinement, but efforts have been made of recent years to make them safer, and the result is satisfactory.

14. Table No. 4 gives the number of convicted prisoners in all prisons in Ceylon on the last day of the year.

No. 4.—Return showing the Number of Convicted Prisoners on the last day of December, 1901, in the Jails of Ceylon.

JAILS.	Two Weeks and under.	Not over a Month, or under Two Weeks.	Not over Three Months, or under a Month.	Not over Six Months, or under Three Months.	Not over One Year, or under Six Months.	Not over Five Years, or under One Year.	Over Five Years.	To be Hanged.	Total.	Deduct Road Ordinance Defaulters.	Balance.

* Major Firminger's salary paid to him in England not included.

16. The increase of expenditure is chiefly owing to the increased number of prisoners, the cost of prisoners a head being less than in 1900.

17. Table A in Appendix IV. shows the daily average of all convicted prisoners in 1901. This rose from 2,231·39 in 1900 to 2,447·75 in 1901. The average of those sentenced to simple imprisonment has increased, as also has that of those on light labour. The daily average of sick has also increased, but not out of proportion to the increased number of prisoners.

18. Table B.—There were in the prisons on the 1st January, 1901, 2,323 convicted prisoners ; on the 1st January, 1902, there were 2,540. Only 40 were discharged on pardon during the year, as compared with 80 in 1900 ; 113 died in 1901, 109 in 1900 ; 37 were hanged in 1901, 32 in 1900.

19. Table C gives the various sentences under which prisoners were admitted in 1901. The most noteworthy point in this table is the increase in the number of long sentences, sentences of over four years rising from 124 in 1899 and 138 in 1900 to 240 in 1901. There were only two sentences of over ten years.

20. Table D is an important table, as it shows to some extent the working of the Habitual Criminals' Ordinance. The identification of former offenders is now so completely and carefully carried out that very few escape it. It must, however, be remembered that this table includes convictions for all offences, and not only for crimes as defined in the Habitual Criminals' Ordinance, which bring the offenders under the operation of the identification system. For a table dealing only with re-convictions for crimes we shall have to look to the Administration Report of the Police.

21. From Table D we find that those with one and not more than three previous convictions who returned to prison were in the last five years :—

1897	...	1,037	1900	...	922
1898.	...	941	1901	...	1,023
1899	...	840			

Of those with over three convictions, the number is practically the same as last year.

22. We may congratulate ourselves that, in spite of increase of population, the number of recidivists, or previously convicted prisoners, is not greater in 1901 than it was five years ago.

The proportion of recidivists to other prisoners in Ceylon for 1901 is 182·19 in a thousand, in England in 1900 it was 612 in a thousand.

23. Table E, the return of daily average of all unconvicted prisoners, shows that remands have been longer and cases have taken longer to dispose of than in 1900, hence with a smaller total of prisoners there is a larger daily average.

24 Table F gives the number of deaths in all the prisons during the year. There were 121 in 1901 as compared with 111 in 1900, an increase accounted for by the increased number of prisoners. The improvement in the health of prisoners in Bogambara prison is satisfactory. The reports of the Medical Officers of the Convict Establishment and Kandy prisons deal fully with the health of the prisoners.

25. Table G gives the details of escapes and recaptures during the year. The prisoner who escaped from Ratnapura prison, and who was still at large at the end of the year, was recaptured early in 1902.

26. Punishments for prison offences, given in Table H, show a satisfactory decrease, in spite of the increased number of prisoners; and this is the more satisfactory from the fact that corporal punishment has been much less frequently resorted to than in former years. Much care has been exercised to reduce corporal punishment for prison offences to a minimum, with the result that, whereas in 1898 there were 677 such punishments (16 floggings and 661 canings), in 1899 259 (14 floggings and 245 canings), in 1900 193 (13 floggings and 180 canings), in 1901 there were only 148 corporal punishments (10 floggings and 138 canings), and a decreased number of other punishments. Corporal punishment cannot be dispensed with altogether, but it should be kept within the narrowest possible limits, to be resorted to only when other punishments fail, or when the offence is of a very grave nature involving violence or unnatural lust. I am convinced that corporal punishment loses much of its terrors and of its deterrent effect if it is too frequently made use of.

27. As I have stated in former reports, many of the prison offences which have to be dealt with are the result of a want of experienced, well-intentioned, reliable officers, from which want the prison system in Ceylon suffers so much. The prison at Jaffna, to which habitual criminals are sent, where the work is severe and the discipline is strict, again this year shows how good management can preserve discipline with little punishment.

28. Table I, showing the number of punishments awarded to officers, is again most unsatisfactory. Taking the total number of officers in the prisons and the total number of prisoners it will be seen that the officer is more frequently punished than the prisoner. Both the police and the prison service suffer from the same defect, that employment in the lower ranks is not worth the consideration of an intelligent, respectable, able-bodied man. Until this is remedied, by an increase of pay chiefly, the defect will remain, and the preservation of the law and the reform of criminals will be, to a great extent, in the hands of men quite unfitted for the work. Increase of pay will not at once remedy the evil, a prejudice against such employment exists in the minds of many of the natives of a suitable class, but it will go far towards gradually removing this prejudice and making service in the police and prisons appear more desirable.

29. Table K gives the number of sick during the year. I again refer to the reports of the Medical Officers of the principal prisons.

30. In Table L, dealing with the religion of prisoners, the only specially noticeable fact is the gradual but steady diminution during the past four years of convictions of persons of the Mohammedan faith. I have before noticed the fact that out of the 37 who suffered the extreme penalty of the law, 35 were, by religion, Buddhists and the other two Mohammedans. This fact is known to the leading Buddhists themselves, and is, I believe, receiving their earnest attention.

31. In Table M 39 Europeans are shown to have been convicted, but of these only two were resident in Ceylon. The remaining 37 were sailors, passengers, and passing loafers, who naturally drift through a large seaport town; most of them were sailors convicted of insubordination or refusing to work, the offence in many cases having been committed on the high seas. The Europeans are shown in the table as "Resident" and "Non-resident," and the misconception of the figures in regard to Europeans, which has in the past led to grave errors, will be thus rendered impossible.

32. In Table N, which deals with the ages of prisoners, I regret to see an increase in the number of convicted prisoners under twenty years of age. I again call attention to the large number of unconvicted children under sixteen years of age remanded to prison. Such a remand is, I am convinced, often the cause of a subsequent criminal career, and I would urge that Magistrates should be instructed not to remand juveniles to prison, if any other possible means of securing their further attendance at court are possible. The Certified Industrial School at Maggona is doing good work, but other measures for the protection of the juvenile from contamination should not be neglected.

33. I have dealt with the substance of O and P returns in the earlier part of my report. The working of the Habitual Criminals' Ordinance is responsible for the rise in the number of cases sent to the higher courts. From the police returns it appears that 181 cases were sent to the higher courts during 1901, most of which would, had the offender not been previously convicted, have been tried in the Police Court.

34. The majority of the prisoners in the Convict Establishment are still employed on the Harbour Works. These are confined in the Mutwal and Mahara prisons. The daily average in Mutwal last year was 444·13 and in Mahara 426·88, but towards the end of the year extra accommodation for 200 was built at Mahara, and this has necessarily somewhat reduced the number at Mutwal.

35. The drainage scheme in Welikada prison has been continued during the year, but has been much retarded by the delay in supplying material.

36. Forty new cells in Galle prison, nearly completed during 1900, came into use in 1901, and formed a much-needed improvement to this prison, which has now cell accommodation for all its inmates when they do not exceed the usual daily average.

37. The small prison at Trincomalee has been rebuilt, and now answers to all the requirements of that town.

38. Isolation cells for infectious diseases have been built in Negombo prison, where they were much needed.

39. New cells for prisoners under observation as suspected lunatics have been built in Matara and Ratnapura prisons.

40 A portion of Welikada prison has been during the year set apart for a Military prison for prisoners of war. The accommodation can be well spared owing to the increased room in Mahara prison.

41. The prison at Hambantota has also been set apart for the use of prisoners of war, not as a prison, but as barrack, the female side only being reserved for the use of the district, in which there is little crime, and for which it is quite sufficient.

42. The improvements most to be desired in the Ceylon prisons in the immediate future are—first, the improvement in the middle and lower ranks of prison officers; then, a better separation of prisoners convicted for the first time, prisoners under sentence in default of payment of fine and prisoners specially selected in consideration of their offence and previous histories from old offenders. This is partially done by the removal of all previously convicted prisoners with sentences of not over eighteen months to Jaffna, but a more thorough system is required.

43. Major R. E. Firminger, Superintendent of the Convict Establishment, went on leave on the 8th April, and Mr. Lloyd has since acted as Superintendent.

44. I attach his report and those of the Medical Officers of the Convict Establishment and Kandy prisons.

Prisons Office,
Colombo, May 13, 1902.

L. F. KNOLLYS,
Inspector-General of Prisons.

APPENDIX I.

REPORT OF THE SUPERINTENDENT OF THE CONVICT ESTABLISHMENT FOR 1901.

THE daily average of prisoners in the jails of the Convict Establishment was 1,600 in 1901 and 1,353 in 1900, or an increase of 247.

The expenditure in 1901 was Rs. 270,065 and in 1900 Rs. 256,208, or an increase of Rs. 13,857.

The value of prisoners' labour was Rs. 139,864 in 1901 and Rs. 131,790 in 1900, or an increase of Rs. 8,074.

Welikada.

A supply of materials for the new drains was not received until late in March, and then only sufficient to keep the mason's party employed for four months. During those four months 2,700 feet of drain and 1,716 square feet of masonry platform round the bathing tank were completed.

In April M, N, O block of cells was set apart and proclaimed a military prison for the detention of Boer Prisoners of War, but later on A, B, C block was proclaimed a military prison, where Boer Prisoners of War are now detained. This is a large and well-ventilated block, with a roomy yard for exercise.

Mutwal.

In October 150 prisoners were transferred to Mahara, and since then this jail has not been kept up to its full strength.

Mahara.

Government having approved of an extension to this jail, the boundary wall on the north side was extended and three additional wards were built within the new enclosure to accommodate 200 extra prisoners. A large meal shed was also erected within this enclosure for 600 prisoners. The work was carried out by prison labour. It was begun in June and finished ready for occupation in September.

Two hundred extra prisoners were transferred to this jail in October from Mutwal and Welikada prisons, bringing the total strength up to 617.

Escapes.

There was only one escape from the jails of the Convict Establishment, and this one was from Mahara.

Health.

Except for an outbreak of influenza, the health of the jails of the Convict Establishment was satisfactory during the year. Owing to the outbreak of influenza there was a slight increase in the death-rate, the deaths in 1900 being 4·95 per cent. of the daily average and in 1901 5·31 per cent., or an increase of 0·36 per cent.

Discipline.

The discipline of the jails was on the whole good. The number of reports against prisoners shows a decrease of 292 when compared with 1900.

The number of corporal punishments have fallen from 142 in 1900 to 113 in 1901.

General.

In April the Superintendent proceeded to England on leave and the Assistant Superintendent was appointed to act for him. First Class Jailer Mr. Duggan was appointed to act for the Assistant Superintendent.

There was an increase in the number of applicants for employment this year, and a slightly better class of candidates was obtainable.

No improvement was made in the clerical staff of the jails.

I attach the Medical Officer's report.

H. LLOYD,
Acting Superintendent.

APPENDIX II.

REPORT OF THE MEDICAL OFFICER OF THE CONVICT ESTABLISHMENT FOR 1901.

I WAS in medical charge of the Convict Establishment during the whole year. The general health of the prisoners was, on the whole, satisfactory, though the sick rate was slightly higher than that for last year. The prevailing diseases were as usual malarial and other fevers, diarrhœa, dysentery, pneumonia, and eye-affections. Bowel complaints and pneumonia claimed about three-fourths of the number of deaths, while all the other diseases were responsible for the rest.

Accommodation.—The average daily strength of prisoners in all the jails of the Convict Establishment during the year was 1,712·50, against 1,388·49 in 1900, an excess of 324·01. The average during the year at Welikada was 728·53 and 563·24 in 1900, at Mutwal 444·43 and 428·99 in 1900, at Mahara 426·88 and 360·82 in 1900, or an excess in each of these jails of 165·29, 15·44, and 66·06, respectively. No addition was made during the year to the accommodation available in the jails at Welikada and Mutwal, but at Mahara three new wards, each capable of accommodating about sixty prisoners, were added to the jail about the latter part of the year, and a portion of the existing meal shed for the use of all the prisoners was constructed in connection with the new wards. The new wards were occupied by prisoners transferred from the Mutwal and Welikada jails in November last, thus relieving to some extent the congestion in the latter jail. Masonry drains are required for the new wards, and I trust these will be built during the current year.

Water Supply.—Labugama water is used in all the jails at Colombo, and for drinking purposes it is boiled before use. At Mahara the water used for drinking and cooking is obtained from a well, but prisoners bathe in a stream, the water of which, having been found insufficient for the large number now confined in that jail, a new reservoir is in course of construction to meet the additional demand.

Food.—In all the prisons of the Convict Establishment raw provisions are supplied by a contractor, and, after being inspected and passed by the Resident Medical Officer, are cooked by prisoners within the premises. When any provisions are of inferior quality or damaged, they are rejected and are replaced by articles of better quality supplied either by the contractor or, failing him, by the prison authorities. The scale of diets provided for the prisoners appears to have been arranged with considerable care; except with regard to the light labour diet and penal No. 1 diet, which appear to me to stand in need of some improvement. In my report for last year reference was made to the insufficiency of the light labour diet; no change has been effected in this diet, but it has been suggested that the convalescent jails should be availed of in cases of prisoners who require a better diet while on light labour. It is not always possible to adopt this suggestion as an alternative to the change in the diet suggested by me, as there are circumstances other than medical to be taken into consideration before a prisoner can be transferred to one of these jails, considerations of safety of the jails, the character of the prisoner, and the necessity of stricter discipline and supervision over him frequently prevent the suggestion being adopted.

Labour.—Prisoners in the Welikada jail were employed in carrying pingo, in husk-beating, or on the treadmill during the first ninety days, or what is known as the penal stage of their confinement. Those who had passed this stage and were known as class prisoners were generally employed as cooks, carpenters, cleaners, blacksmiths, masons, &c.

In the Mutwal and Mahara jails only class prisoners were confined, and they were employed in quarrying, stone-cutting, loading, and earth-cutting. Pingo-carrying and husk-beating were tasks sometimes allotted to prisoners in these jails either as a punishment for offences against prison discipline, or on medical grounds when necessity arose for providing work in shade for them.

Hospitals.—In the Borella Convict Hospital, including the wards for infectious diseases, the number of patients treated during the year was 2,224, made up of 68 patients who remained over from the previous year and 2,156 admitted during the present. In the Mahara hospital the total number treated for the year was 1,175, in the Welikada female hospital 106, at Mutwal 2, and at Hulftsdorp 1. The total number treated in all the hospitals of the Convict Establishment was 3,508 as against 3,018 in 1900, thus showing an increase of 490; of the total number admitted into the Borella Convict Hospital during the year, 1,296 were received from Welikada prison, 740 from Mutwal, 52 from Mahara, and 68 from Hulftsdorp. As compared with the figures for 1900, there was an increase in the admissions from Welikada of 102, from Mahara of 7, and from Hulftsdorp of 29; while there was a decrease in those from Mutwal of 75.

Sixty-six deaths occurred in the Borella Convict Hospital, against 53 in 1900. There were 12 deaths at Mahara, 1 at Mutwal out of 2 treated there, and 1 at Hulftsdorp, being a sudden death due to rupture of the aorta in a remand prisoner. The total number of deaths during the year in all the convict hospitals was 80, as against 62 in the previous year. The excess in the death-rate is mainly attributable to the increase in the strength of the jail this year over that for the previous year, and to two outbreaks of influenza, followed by pneumonia, which claimed 33 out of the 80 deaths. The total number of cases of pneumonia treated in the convict hospitals during the year was 96, as against 49 treated during the previous year, or an excess of 47 cases. One jail alone, namely Mutwal, contributed 52 cases, with 17 deaths; while Welikada was responsible for 29 cases, with 11 deaths.

The unusual prevalence of pneumonia at certain seasons must be attributed chiefly to climatic causes. It is impossible to effectually and completely protect all the prisoners, especially those working in parties outside jails, from the baneful effects of chilly winds and other climatic influences; but so far as this is practicable steps have been taken to secure that end. Both at Mutwal and Mahara sheds have been provided into which prisoners retire as soon as signs are noticed of impending rain, and persons, specially appointed for the purpose, watch the gathering clouds and give notice to those in charge of prisoners to enable them to bring the latter into the sheds before the rain actually falls. Special attention has been paid to the general health of prisoners in the Mutwal jail, who, more than others, are exposed to the action of those climatic influences which induce chest complaints.

In September last when a severe outbreak of pneumonia occurred at Mutwal, it was decided to delay the departure of the prisoners for work (which usually took place about 6.30 A.M.) till 7 A.M., in order to prevent them from being affected by the cold wind which at that season prevailed in the early mornings. This decision, which was carried out within a short time of the outbreak, tended no doubt to check it from assuming larger proportions.

The ventilation of some of the wards which was found to be defective was improved and steps taken to effect further improvement in this respect. In addition to these precautions, the number of prisoners confined in that jail was reduced by nearly half by transfer to Mahara, where special wards had been constructed for their accommodation.

The total number of cases of infectious diseases, consisting of mumps, chickenpox, and measles, treated in the wards set apart for them in connection with the Borella Convict Hospital, was 23, which is a considerable decrease on the number treated during the previous year, namely 134.

The number of cases of eye disease, however, shows an increase from 116 in 1900 to 239 in the year under review. The chief contributor to this increase was the Mutwal jail, where an outbreak of these affections, chiefly of conjunctivitis, due probably to the excessive dust blown by the wind into the eyes of prisoners, and to the strong glare of the sun, rendered necessary the transfer of 200 cases to the hospital during the year.

There was a slight outbreak of enteric fever in the Welikada jail, resulting in the admission into the Borella Convict Hospital of 8 cases of that disease. The infection was traced to a Prisoner of War who came from the Diyatalawa Camp. Altogether three cases occurred among the Prisoners of War, and these were transferred to the General Hospital, one among the female prisoners also transferred to the same hospital, eight among male prisoners sent to the Borella Convict Hospital, and two among the officers connected with the Welikada jail. There were two deaths among those treated in the General Hospital and one among the officers, but none, I am glad to say, occurred among those treated in the Convict Hospital. The last case of enteric fever was admitted to hospital on the 1st January of the current year, and none has occurred since.

Two male and three female prisoners died in the General Hospital, in the returns of which hospital I have no doubt these deaths will be included. I have therefore excluded them from the returns of the convict hospitals.

During the year 17 prisoners were executed within the Welikada jail, in each case followed by the usual post-mortem examination and magisterial inquiry. The executions were carried out in a satisfactory manner. There was also one death from suicide at Welikada.

I may take this opportunity of expressing my thanks to Major Knollys, Inspector-General of Prisons, for valuable help and counsel readily afforded to me at all times.

ALFRED B. SANTIAGO, F.R.C.S.,
Assistant Colonial Surgeon.

Colombo, February 26, 1902.

19 III 02

APPENDIX III.

REPORT OF THE MEDICAL OFFICER OF THE KANDY JAILS FOR 1901.

I HAD medical charge of the Kandy jails during last year.

Jail Strength and Accommodation.—The number of admissions into the Bogambara jail during the year was 2,402 and the average daily strength 409·57, and into the Old Jail the numbers were 2,104 and 61·46 respectively.

The Bogambara jail has accommodation for 515 prisoners, consisting of 324 cells and two association wards for 145 prisoners, and in the Old Jail 43 cells and eight wards capable of accommodating 120, so that there was no overcrowding.

Diseases and General Health of Prisoners.—As in former years, malarial fevers, dysentery and diarrhœa, pulmonary affections, and eye diseases were chiefly responsible for the admissions into hospital. There was early in the year an outbreak of chickenpox amongst the prisoners at Bogambara jail, but the source of infection could not have been traced, as this disease was widespread in the town and surrounding districts at the time; every precaution was taken to prevent the spread of infection. Each case as it occurred was sent to the infectious diseases hospital, but when the accommodation there was no longer possible owing to the admission of town residents, &c., the prisoners affected were segregated in one of the association wards. During the time the disease was prevalent transfer of prisoners to and from this jail was suspended. The first cases were discovered on the 17th February, and about the 28th March the disease was stamped out. In all 37 prisoners were attacked. Since then there were a few sporadic cases occurring from time to time, the total number of cases being 41: Of other infectious diseases, there were 2 cases of measles and 5 of mumps. In the Old Jail there were 2 cases of chickenpox, 1 of measles, and 3 of mumps, all of which were also transferred to the infectious diseases hospital. Compared with the previous year, the number of cases of conjunctivitis was exceptionally large, there having been 68 in 1901 and only 6 the year previous.

The following table shows the number of patients treated, &c., during the last two years:—

	1900.	1901.
Remained on 31st December of year previous ...	10	12
Admitted	570	622
Total treated ...	580	634
Discharged	541	606
Died	27	14
Remaining at the end of year	12	14
Daily average of sick	15·89	15·58
Percentage of deaths to total treated	4·65	2·20
Percentage of sick to strength	13·86	14·07
Percentage of deaths to strength	·64	·31

Comparing the figures for the two years, an increase in the number of admissions is shown, but if the chickenpox cases are excluded, the increase would only be by 11; the daily average sick is a few points less, and would have been still lower if not for the same reason. The number of deaths and the death-rate is only half of what it was the year previous. This is no doubt due to the happy circumstance of an almost entire absence of cases of pneumonia, to which disease in 1900 11 deaths were due. There were in that year 28 cases, and last year only one, which recovered.

The deaths that occurred were from the following diseases:—Dysentery 4, diarrhœa 4, and from malarial remittent fever, erysipelas, congestion of brain, valvular disease of heart, erupyema, and peritonitis 1 each. The case of erysipelas which proved fatal was really one of gunshot injuries by slugs about the region of the knee, causing at first erysipelas and then suppuration, synovitis of extensive abscesses in the thigh and leg, death being due to blood poisoning and exhaustion.

On my recommendation, and after examination by a Medical Board, 19 prisoners were transferred to a convalescent jail on recovery after long illness, while the number of prisoners put on light labour on account of general debility, due to advanced age or disease, was 39. The year previous 12 were transferred to convalescent jails and 187 prisoners were put on light labour.

From the Old Jail 23 males and 2 females had to be transferred to the jail and civil hospital respectively for treatment. These were chiefly cases of dysentery or fever. One suspected insane was also sent to the latter institution, as he appeared to be more physically than mentally deranged.

On the whole, I think, the general health of the prisoners of both jails was very satisfactory, for the majority of them are fairly well developed and robust individuals, and barring the chicken-pox, which even at its worst is never serious, there was nothing to affect them in any way. Nearly every prisoner had been subject to malarial fever more or less severely some time in his lifetime, and the more weakly of them of course come under treatment for this disease from time to time during their period of incarceration. Of the other diseases, chills are usually the existing cause, and there are more cases of illness at the changes of season and during the prevalence of the north-east monsoon, when the changes of temperature are sudden and severe. A little extra care and attention at this time to clothing would certainly be a preventive. A former Medical Officer has suggested flannel for night wear, and after the experience of over a year I would strongly recommend the consideration of an innovation of this sort, or flannel banians and "cholera belts" to be worn at certain times of the year. Another detail to be carefully attended to is the wholesale bathing of prisoners; no doubt the practice in vogue is very necessary, but I think that some exceptions should be made, and the officers allowed to use their own discretion—a mere matter of common sense—and exempt those suffering with catarrhs or feeling out of sorts, and only those suspected of malingering or persistently refusing to bathe being brought before the Medical Officer.

Labour.—The majority of prisoners in the Bogambara jail were penal stage men, whose hard labour consisted of pingo, or husk-beating when unfit for the former through debility and shoulder abrasions. The class prisoners, of whom the daily average number was 95·84, were employed in prison service and as orderlies.

Food and Diets.—Raw provisions are obtained by a yearly contract and the meals cooked in the jail. The daily supplies are examined each morning, and if of inferior quality or not considered wholesome rejected. The scale of diets has been in force for years and meets all requirements, with the exception of the light labour diet, regarding which I must repeat what I said last year, *i.e.*, that it is insufficient in quantity and in quality, is not suited for the individual who after a long illness or general debility is not fitted for hard labour.

Water Supply.—Water for both jails is plentiful and of good quality, and is drawn from the town supply. It is also boiled before use. The bathing arrangements are satisfactory.

Latrines and Night Soil.—The latrines are worked on the dry-earth system, and the buckets emptied twice daily and the excreta removed by the Municipal carts.

Jail Hospital,
Kandy, January 23, 1902.

ALLAN KALENBERG,
Deputy Assistant Colonial Surgeon.

APPENDIX IV.

A.—Return showing the Daily Average of all Convicted Prisoners confined within the Jails of Ceylon during 1901.

PART IV.—MISCELLANEOUS.

MEDICAL.

REPORT OF THE PRINCIPAL CIVIL MEDICAL OFFICER AND INSPECTOR-GENERAL OF HOSPITALS FOR 1901.

I HAVE the honour to submit for the information of Government the Administration Report of the Medical Department for the year 1901, with the usual statistical tables.

I.—POPULATION: BIRTH- AND DEATH-RATES.

The estimated population of the Island on December 31, 1901, was 3,619,165; 134,252 births were registered and 98,813 deaths. The birth-rate was 37·3 against 38·5, and the death-rate 27·5 against 28·6 per mille in the previous year, calculated on the estimated population in the middle of the year.

II.—PUBLIC HEALTH.

The public health of the inhabitants of the Island has been good. There has been an absence of those widespread severe outbreaks of malarial fever which characterized the previous year, but cases of smallpox have been numerous, with a few outbreaks of cholera. The sanitary conditions throughout all the towns and villages of the Island are always being improved.

Malarial Fever.—In the Western Province the most sickly and malarious district was that of Negombo (no less than 30,919 cases having been treated during the year), a good part of which is low-lying and swampy, and cases always occur there after the burst of the south-west monsoon.

In the North-Western and Sabaragamuwa Provinces malarial disease was the cause of the largest number of admissions, 67,265 cases being treated during the year.

In the Eastern Province malarial fever existed, and was at its height during April–May.

In the Southern Province this disease existed in the outlying districts to some extent, but the general character of the fever was milder than in the previous year.

It was noticed that in the Northern Province this disease was present in a mild form, and was most prevalent in the first quarter of the year, and was slightly in excess of the previous year.

In the Province of Uva the disease was not prevalent.

In the Central and North-Central Provinces malaria, although present after the monsoon rains, did not assume an epidemic character anywhere, and those cases which occurred readily yielded to treatment.

In my report for last year I pointed out the connection shown between the outbreaks of malarial fever and the monsoon rains, and this year the same circumstance was again noticed.

The most common type of malarial fever in this Island is the tropical (summer-autumn), and is found extensively among both Europeans and natives. No hæmoglobinuric or black water fever up to the present has been seen here, except in passengers from Africa, and though children suffer as severely as adults, yet Kala Azar has never been reported.

Prevention.—During the past year much has been done in endeavouring to find out the best means for the prevention of malarial fever applicable here. The methods which have been under consideration are the following:—

(1) Quinine treatment.
(2) Prevention of mosquito bites.
(3) Prevention of the formation of stagnant pools of water.
(4) Destruction of the anopheles.

(1) *Quinine Treatment.*—Compulsory quinine administration is of course quite impossible, but much has been done by providing quinine in all the small dispensaries and stations and by giving quinine to the local post offices, at which it can be purchased, so that it is possible for the poorest persons to obtain without any difficulty plenty of quinine, if they so desire.

(2) *Prevention of Mosquito Bites.*—Mosquito curtains are to be found in most districts among the better classes, but unfortunately so little care is applied to their use that they are often practically valueless.

(3) *Prevention of the Formation of Stagnant Pools of Water.*—All hollows containing stagnant water should be filled up, and where this is not possible some aperture of escape for the water should be made in order to convert the otherwise stagnant into running water, in which the anopheles will not develop.

(4) *Destruction of the Anopheles.*—Inquiries have been made into the Culicidæ of the Island during the past year by Dr. Chalmers, F.R.C.S., and the anopheles have been found by him in the following districts:—Colombo, Kurunegala, Polgahawela, Matale, Maduela, Dambulla, Madatugama, Kekirawa, Anuradhapura, Habarana, Mihintale, Kallokunkam, Mankulam, Sarakoli, Jaffna, Mullaittivu, Trincomalee, Rambukkana, Puttalam, Ballala, and Wariyapola Districts.

He made a journey through the northern part of the Island in order to study the distribution of the presence or absence of the anopheles in the malarial regions thereof.

The time of the year was September in the dry season before the burst of the north-east monsoon, so that there were comparatively few mosquitoes about, which fact renders the points to be mentioned below the more striking.

He first stopped for one night at Peradeniya, and there Mr. Green informed him that he had found the anopheles in nearly every month of the year.

At Matale he found the larvæ and the adults, but north of Matale he entered what appears to be almost an anopheles region; from Dambulla to Jaffna everywhere he found the anopheles larvæ. As he was travelling rapidly it was not possible often to catch the adults, but he reared the mosquito in every place from the larvæ.

He next proceeded to Mullaittivu, and had hardly been there half an hour before he had caught between thirty to sixty adult anopheles.

In Trincomalee the anopheles had previously been reported, and he confirms this observation.

In Rambukkana also they were found in plenty.

Larvæ.

Habitats.—In the above-mentioned places the larvæ live principally in pools, the margins of which have attached masses of green matter, or on which masses of green algæ, plants, &c., float. But larvæ have also been found in clear pools where there were no fish.

The larvæ are found in brackish water, in fresh water, in slowly-moving and in stagnant water. In pools which abound with fish they have only been found if there is sufficient green material to protect them from the fish. They have not been found in pools, pokunas, kulams, which lacked this green vegetation but which abounded with fish.

They are readily found in the small pools which form around wells, and in drains which sloped upwards instead of downwards and which contained pools of water.

The larvæ have not been found in the water of deep wells, although Culex larvæ have been found there. They have been found in the pools of water of paddy fields.

They are often difficult to discern because of their protective colouring, *e.g.*, in a pool in white sand they are white, in a pool in the black earth they are black, in a pool with green colouring matter they are green.

From the above it is concluded that they can live in any pool in which there is sufficient food and sufficient protection against such enemies as small fish, tadpoles, and small crustacea, and that they are so widely distributed in Ceylon that their destruction is impossible.

The Adults.—His observations on the habitats of adults are that during the daytime they can be found—

(*a*) *In Houses:*—Anywhere protected from light, *e.g.*, under clothes, in dark corners, under beds, behind furniture, &c.

(*b*) *In the Exterior:*—In dark places under trees.

It appears that they hatch in the early evening, and that during their nuptial flight they are attracted to the houses by light. In the houses they suck the blood at any time when they have the chance and then hide in dark corners or dark rooms during the brighter part of the day, or in dark places in the exterior. They appear to lay their eggs in some water close at hand to any house or grove which they inhabit. They do not appear to fly very high, the greater number being found below 12 feet.

From the above it is concluded that dark places in the daytime and the night are the most favourable places and times for being bitten. That protection must be specially applied to lower parts of rooms, &c.

The following extract from an officer of the Surveyor-General's Department is inserted as an example of the good result of Dr. Manson's writings:—

> I had read Dr. Patrick Manson's Lecture, "Mosquitoes and Malaria," in the proceedings of the Royal Colonial Institute, and determined to give it a practical test, so last year, when on the topographical survey of the Wellawaya and Kataragam korales in the low-country of Uva, I took every precaution against being bitten by mosquitoes.
>
> I always used a mosquito net on my bed, and turned in early or sat up under a little bell tent made of mosquito netting when they were troublesome. Of course I took occasional small doses of quinine as a preventive. These were the only precautions, and I had not a single attack of fever, though in previous years fever was contracted as a matter of course. I had seven surveyors and about ninety-four coolies in my party, and I learn that there was not one who had not had fever that season.
>
> The sickness among the surveyors amounted to 113 days, or an average of 17 days each in the eight months' field season, while 1,210 were recorded against the coolies, or 21 days per gang of twelve per month, but of 94 who began only 36 stuck to their work throughout the season. As far as I can learn there was only one death (malaria and pneumonia), but many were sent back to their villages quite incapacitated.

Cholera.—During the year under review cholera occurred in the Western, Northern, North-Western, and Uva Provinces. Nine cases, with 8 deaths, occurred in the Western Province. Of these, 8 cases—all fatal—occurred at the Ragama Cooly Depôt. The greatest number of cases was reported from the Northern Province, where 35 cases occurred, with 60 deaths; the Province of Uva comes next, with 46 cases and 27 deaths. Four outbreaks of cholera occurred during the year at Ragama Cooly Depôt.

The subjoined table shows the Provinces in which outbreaks occurred, the number of cases attacked, the number of those who died, with their nationality :—

Province.	Nationality.													
	Sinhalese.		Moors.		Tamils.		Malays.		Immigrants.		Others.		Total.

Total ..	28	16	20	12	96	61	—	—	8	8	—	—	152	97

Smallpox.—This disease is not endemic in this Island ; the outbreaks of smallpox can always be traced to imported cases in the first instance. During the year under review several cases occurred in the Western, Central, Northern, Southern, North-Western, Sabaragamuwa, and Uva Provinces ; there were 390 cases with 75 deaths, distributed as follows :—

	Cases.	Deaths.		Cases.	Deaths.
Western Province ...	311	59	North-Central Province ...	—	—
Central Province ...	25	4	Province of Uva ...	10	2
Northern Province ...	13	2	Province of Sabaragamuwa ...	9	4
Southern Province ...	8	2	Total ...	390	75
Eastern Province ...	—	—			
North-Western Province ...	14	2			

Western Province.—This disease prevailed in Colombo throughout the year ; two cases were remaining at the end of the year 1900 at the Infectious Diseases Hospital, Kanatta, and 202 cases were admitted during 1901, making a total of 204 admissions, with 35 deaths. Six of these cases were from on board ship.

The prolonged outbreak in Colombo resulted in infecting six villages in the Panadure District, two in the Kalutara District, and four in the Colombo District.

Central Province.—There were 25 cases reported, with 4 deaths, from this Province. There were 13 cases of smallpox, with 2 deaths, reported from the Northern Province ; 8 cases, with 2 deaths, from the Southern Province ; 10 cases, with 2 deaths, from the Province of Uva ; and 14 cases, with 2 deaths, from the North-Western Province ; in the Province of Sabaragamuwa there were 9 cases reported with 4 deaths. The North-Central and the Eastern Provinces were free from smallpox during the year.

Chickenpox.—There were 1,762 cases of this mild infectious disease reported from various parts of the Island, distributed as follows :—

	Cases.	Deaths.		Cases.	Deaths.
Western Province ...	419	1	North-Central Province ...	1	—
Central Province ...	741	1	Province of Uva ...	123	2
Northern Province ...	8	—	Province of Sabaragamuwa ...	234	—
Southern Province ...	214	2	Total ...	1,762	6
Eastern Province ...	1	—			
North-Western Province ...	21	—			

Most of these cases were treated in their own homes, but in towns where an infectious diseases hospital exists many of the cases were moved there.

Measles.—This disease did not assume any alarming proportions in any of the towns or villages.

Dysentery.—This disease was fairly equally distributed throughout the Island. In the Western, North-Western, and Sabaragamuwa Provinces it was most prevalent. In the Northern Province the numbers attacked were slightly in excess of the previous year. In the Eastern Province the prevalence was not marked, but it was present throughout the year. In the Province of Uva the cases were comparatively few. In the Central and North-Central Provinces it prevailed, but never in an epidemic form.

The total number of cases treated in all hospitals was 4,177, with 1,543 deaths. The largest number treated in any one institution was at the General Hospital, Colombo, where 677 cases were admitted, of whom 101 died.

Enteric Fever.—The number of cases treated in the various hospitals throughout the Island was 292, with 74 deaths. The General Hospital, Colombo, admitted 198 cases, of whom 48 died. Some improvement has been made in the number of cases notified. This remark applies especially to Colombo, owing to the attention of the public having been drawn to the law by advertisement in the *Gazette* and local Press ; still I have no doubt very many cases occurred of the existence of which the authorities had no knowledge.

Causation of Enteric Fever.—While in most cases enteric fever is caused by polluted water, as for example in Colombo, yet there is little or no doubt, though the experimental proof is wanting, that it also spreads by other means, such as the common fly, dust, &c.

Leprosy.—The total number of cases reported during the year 1901 was 590, against 635 cases in the previous year, being a decrease of 45 cases.

Return of Lepers treated as Outdoor Patients in the Hospitals and Dispensaries during the Years 1900 and 1901.

	1900.	1901.		1900.	1901.
Western Province ...	53	48	North-Central Province ...	2	—
Central Province ...	27	6	Province of Uva ...	13	7
Northern Province ...	11	6	Province of Sabaragamuwa ...	28	10
Southern Province ...	26	19	Total ...	210	135
North-Western Province ...	7	2			
Eastern Province ...	43	37			

428 cases were treated in the Leper Asylum, Hendala, and 27 in the Kalmunai hospital. The Superintendent of the Leper Asylum thinks there is a progressive increase, and gives the following table of distribution :—

	New Cases.		New Cases.
Western Province ...	51	Eastern Province ...	1
Central Province ...	6	Southern India ...	9
Southern Province ...	12	Total ...	80
Northern Province ...	1		

The Western Province shows the largest number of cases, but this may be due to the convenience of the Asylum for the residents. Colombo comes first with 19 new cases, and it will be noticed that 9 cases were directly imported from India. It might be advisable to prevent lepers from landing on our shores, but legislation would have to make this course practicable.

Since the beginning of the year 1902 the Leper Ordinance has come into operation, and in my report for 1902 much useful information as to the actual number of lepers in the Island will be available. Drs. Van Houten and Koster, Prisoners of War of the Dutch Ambulance, have been working at the Bacteriology and clinical history of this disease during the past year.

Anchylostomiasis.—This disease is constantly being introduced from India by Malabar coolies, and is spread broadcast owing to the careless habits of the cooly, who pollutes the soil and water with his excreta. This disease is on the increase. There were 1,691 admissions in all hospitals, with 326 deaths. The largest number were treated in the Colombo Hospital, viz., 699 admissions, with 86 deaths. The largest number of cases occur in the planting districts. The danger of the disease exists in the profound anæmia, which so lowers the vitality that the victim is carried off by practically any intercurrent complaint.

I am inclined to regard a part at least of the increase in the reported cases of anchylostomiasis to the fact that the disease is recognized now, while only a few years ago it would probably have been regarded as anæmia, consequent on malarial fever.

Parangi.—From the hospital returns it would appear that the number of admissions for this disease has steadily increased during the last five years, but not in proportion to the increase of the population, so that the number affected in ratio to the inhabitants is becoming less every year ; as food becomes more easily obtainable with the extension of irrigation, and as sanitary methods become more generally known, this disease will show a marked decrease. The death-rate is remarkably small : out of 3,117 admissions for this disease during the year there were only 12 deaths.

I attach herewith a return of the principal diseases for the last five years for purposes of comparison :—

METEOROLOGICAL CONDITIONS AND THEIR RELATIONSHIP TO MALARIA.

For the purposes of this report it has been thought advisable to roughly divide the Island into eastern and western portions. The eastern portion contains the districts affected by the north-east monsoon and the western by the south-west monsoon. The figures show the total number of cases of diseases of malaria and the total amount of rainfall in the two districts.

The subject will be considered under two heads—

(*a*) The malaria of the west.
(*b*) The malaria of the east.

(*a*) *The Malaria of the West.*—Chart I. shows the curve of total disease in the western portion of Ceylon. It is to be noticed that this curve has its maximum height in January, and that there is a rapid fall to a minimum in February, a rise to a secondary maximum in May, and a fall to a second minimum in September, and then the gradual rise begins, which culminates in the January maximum of the next year.

Chart II. shows the curve of the cases of malarial fever in the west: its maximum is in January, with a slight rise in May, and a minimum in September, whence the maximum rise begins.

Chart III. shows the total rainfall from the various stations in the west from which malarial returns are obtained. It has been thought better to show it in the aggregate as well as in the mean.

In January the curve is low, reaching a minimum in February, and then rising in April, falling in May, and rising to a secondary maximum in June, falling to a secondary minimum in August, rising to a maximum in November, and declining in December.

(*b*) *The Malaria of the East.*—Chart IV. shows the curve of the total number of cases of disease very high in January, and falling rapidly in February, and then more slowly to a minimum in September, and then gradually rising.

Chart V. shows the curve of malaria in the east very high in January, falling to a minimum in August and September, and then rising.

Chart VI. shows the curve of the total rainfall in the east, very low in January, rising to a small height in April, declining to a minimum in July, and rising to a maximum in November, and falling in December.

Remarks on the Western Curves.—It will at once be seen that there is a general similarity among the three western curves. The rainfall curve reaches its highest point two months before the highest point of the total disease. The highest point of total disease closely compares with the highest point of malarial disease, each having a maximum in January, a secondary maximum in May, and a minimum in September.

Remarks on the Malarial Curve.—On comparing the malarial curve with the curve of rainfall it will be noticed that the rainfall begins to rise in August, reaches its maximum in November, and declines in December and January, while the malarial curve and that of total disease begins to rise from September through October, November, and December to reach a maximum in January. There is a secondary rise in the western curves in May after the rainfall in April, while the rain of June does not produce a rise in the malarial curve, and hence only a slight rise in total diseases curve.

Remarks on the Eastern Curves.—The similarity of the eastern curves is more marked than that of the western. The main feature of the curves is the loop formation running in the total diseases from January to January of the next year as the highest point, and the lowest point being in September, or in the cases of the rainfall from November to November, with the lowest point in July. Again the rainfall curve precedes the rise of total disease and the rise of malaria. Again the malarial curve is similar to that of total disease, and indeed is its main factor.

GENERAL SANITARY CONDITION OF THE COLONY AND OF THE CHIEF TOWNS.

The general sanitary condition of the Island remains in much the same condition as *last* year. The same methods of disposal of dust and fæcal matter exist, and, though by no means satisfactory, are still far from bad when compared with other tropical countries. The water supply is often very good, and steps are being taken every year to remedy defects.

Colombo.—The town is growing rapidly, and urgent methods are needed and are being taken to keep it in as sanitary a condition as possible.

Port sanitation is the first consideration, as the number of ships entering the port from all parts of the world is rapidly increasing, and the first line of defence to the town against disease is the sanitation of the port. This has been carried out in a most efficient manner during the year. In the town itself the streets have been made wider, so that air space is abundant, but the dust is objectionable and detrimental to health. The streets should, if possible, be watered more frequently to allay this nuisance. The houses of the poor still need much improvement, and attempts to make these more healthy and sanitary are making their mark. The scavenging is fairly good.

Fæcal matter is still removed at night and buried. It need hardly be said that this is objectionable, and that some other method is desirable. Much has been done, but much remains to be done, with regard to the drainage of Colombo. Everywhere collections of stagnant water are to be seen, but though these would appear likely breeding grounds for anopheles and therefore for the spread of malaria, only Culex larvæ have up to the present been found. Government has sanctioned the modified system of drainage proposed by Mr. Mansergh, C.M.G.

The water supply derived from the Labugama reservoir has always been favourably reported upon by the City Analyst. Infectious cases, viz., smallpox and enteric fever, have been common.

Kandy, the capital of the Central Province, possesses a Municipality, and employs a medical man as Sanitary Officer. The drainage of the town is defective, but measures are under consideration for an improved system. The water supply is of good quality, but during a long drought is a source of some anxiety. The town itself is well scavenged and is lighted by electricity. The burial of night soil is the method adopted for the conservancy of the town.

Jaffna, the chief town of the Northern Province, possesses neither a Municipality nor a Local Board. Certain parts of the town are in a very crowded and insanitary state. There are two public latrines, which are not resorted to. The cesspit system is in vogue. The water supply is from uncovered wells. Sunlight and free circulation of air are interfered with by the houses being huddled together and by high cadjan fences. The foreshore and other places are fouled and polluted. Drainage requires attention.

Galle, the capital of the Southern Province, is still the most insanitary of the towns possessing Municipalities. Although a good many improvements have been effected as regards the drainage and conservancy, much yet remains to be done. The water supply is still derived from the Bikke reservoir; a system of filtration has not yet been arranged owing to the cost. The dry-earth system has been introduced in some parts of the town, and has been found to work satisfactorily. Although a good deal has been done as regards the drains in the Fort, they are still very defective in several localities.

Batticaloa, the chief town of the Eastern Province, possesses a Local Board, and the sanitary condition is said to be fairly satisfactory. The drainage is very bad, and the water supply equally so; the small supply of good water from wells is curtailed by the wells running dry during drought. The latrine arrangements are very defective; cesspits are used. As in Jaffna the foreshore and neighbouring jungles are polluted by human excreta.

Kurunegala, the chief town of the North-Western Province, is in fairly good sanitary condition, but its drainage and water supply are defective.

Anuradhapura, the principal town of the North-Central Province, formerly had a reputation for unhealthiness, but of recent years, owing to improved sanitary measures, the health of the inhabitants has wonderfully improved.

Badulla, the chief town of the Province of Uva, is a good specimen of what a sanitary tropical town should be, and is provided with a good water service by pipes. The town is well kept. The drainage, however, is defective.

Ratnapura, the chief town of the Province of Sabaragamuwa, possesses a Local Board, and is in a fair state of sanitation. The water supply is good.

Vaccination.—During the year 165,948 subjects were vaccinated; 152,106 were primary vaccinations and 13,842 re-vaccinations. Of the former, 126,500 were successful and 10,795 unsuccessful, and in 14,811 subjects the result of the operation was not known, as they failed to present themselves for examination on the appointed days. The percentage of successful cases to total inspected was 92·13. Of the re-vaccinations, 7,744 were successful and 2,721 unsuccessful, and the result was not known in 3,377 cases, as the subjects failed to re-present themselves for inspection. The percentage of successful to total inspected was 73·99. Five calf institutions were in operation during the year at Colombo, Kandy, Galle, Jaffna, and Batticaloa for the preparation of glycerinated calf lymph, which was distributed in sufficient quantities to all parts of the Island. The inhabitants of the Island are well protected against smallpox, and to this cause is due the prevention of the spread of this disease from the various foci that existed during the year. It is hoped that next year a large vaccine station in Colombo will be established, which will do away with the numerous outstation institutions.

The following tables give figures for 1900 and 1901 for the purpose of comparison :—

Table showing the Primary and Re-vaccination in the Island during 1900 and 1901.

	1900.	1901.
Primary Vaccination :—		
Number vaccinated	122,518 ...	152,106
Successful	98,871 ...	126,500

Plague.—The Plague Committee is a Standing Committee consisting of the following members :—The Hon. Mr. F. R. Ellis, C.M.G.; the Hon. the Government Agent, Western Province; the Principal Civil Medical Officer; the Mayor of Colombo; the Hon. the Principal Collector of Customs (Secretary). It has held several meetings, and has revised from time to time the precautions instituted to combat an outbreak of this disease. This Committee is in reality a Port Sanitary Board, and any subject affecting quarantine and infectious disease arriving in Colombo is dealt with by it. All returns of plague from infected ports are received by the Committee, and telegraphic accounts of plague occurring in places adjacent to Ceylon are received regularly. The staff of Port Surgeons performed their duties with intelligence and promptitude, and were ever on the alert to discover disease among the arrivals at this port. Notwithstanding the strict supervision maintained, the travelling public from infected ports have not been inconvenienced, and no harsh or exasperating rules have been promulgated to interfere with their comfort or to prevent their landing. The disinfection of their baggage and of soiled linen has been well carried out by means of two Thresh's steam disinfectors. The services of a female Medical Port Officer have been discontinued. A new disinfecting station has been established on shore, and the hospital ship, which used to be employed for this purpose, has been handed over to the Police Department.

Systematic onslaughts on rats have been made from time to time in various parts of the Island, and particularly in Colombo at the Customs landing premises, and by the Mayor throughout the city, with good results. A Clayton fire extinguisher has been ordered for the disinfection of ships' holds.

All minor ports, with the exception of Kayts in the North, likely to be visited by native trading vessels from India, have been closed, and this arrangement has worked most satisfactorily. As a precautionary measure steam patrol boats have been employed round the coast.

The immigrant cooly traffic has not been interfered with, and several batches arriving from plague-infected parts of India have undergone the necessary period of quarantine at Ragama Camp, when, after proper disinfection of themselves and belongings, they have been drafted to their several estates.

III.—GENERAL.

MEDICO-LEGAL DUTIES.

During the year 1901, 264 analyses were conducted, of which 129 were judicial analyses, 27 were samples of kerosine oil, 12 were samples of fuel oil, 6 were samples of beer, and 17 were samples of water, spirits, &c., from His Majesty's Customs, Local Boards, and the Railway Department, and 73 were samples of water conducted at the request of the Government.

Of the 129 judicial analyses, 93 were undertaken for the detection of poisons and 36 for examination of stains. In the poisoning cases, arsenic was detected in 14 analyses, mercury in 2, datura in 3, canabis indica in 16, morphine in 2, sulphate of magnesium in 1, alcohol in 1, and in the rest of the analyses no poison was detected.

A synopsis of the analyses for the year in a tabular form is herewith appended :—

ADMINISTRATIVE : HOSPITALS AND ASYLUMS.

During the year 1901, 66 hospitals and asylums were in operation, against 64 the previous year. A new field or parangi hospital at Maha-oya, a district hospital at Pussellawa, and another at Dimbula were opened last year. The new infirmary for 14 beds at the Leper Asylum was also occupied.

Numbers treated.—In the Civil and Lying-in Home Hospitals there were 43,949 cases treated with 4,219 deaths, being 2,043 cases and 484 deaths more than the preceding year. The daily average sick was 1,647·23, as against 1,679·10 the previous year.

In the Field Hospitals there were 4,680 cases treated with 156 deaths, against 4,364 treated and 154 deaths during the preceding year, being 316 cases and 2 deaths more than the preceding year. The daily average sick was 184·29, as against 181·78 during the previous year. The number treated in the five Immigrant Hospitals was 2,047, against 1,944 in the previous year. Of the total treated, the deaths numbered 90, or 11 more than the preceding year. The daily average sick was 84·45, as against 74·28 the previous year.

In the District Hospitals 14,816 cases were treated, against 13,785 during the preceding year. There were 3,511 deaths, against 2,284 in the previous year. The daily average was 844·27, against 771·78 the previous year.

Lunatic Asylum, Colombo.—During 1901, 124 patients were admitted into the Asylum, which with 494 remaining from the previous year made the total insane population 618, of whom 388 were males and 230 females. The daily average number of inmates was 481·05. Of the total treated, 52 were discharged recovered, 14 relieved, and 17 not improved. There were 72 deaths, and 463 remained

under treatment at the end of the year. Of these, 150 were maniacal and dangerous, 173 quiet chronic, 102 melancholic and suicidal, and 38 idiotic, paralytic, or epileptic.

The institution consists of 18 dormitories, 20 day-rooms and corridors used as day-rooms, and 133 single rooms. The water supply is drawn from the Labugama reservoir, which supplies the town. The quality is good and the quantity ample. There are 19 lavatories, 17 baths, and 19 latrines. The dry-earth system is carefully carried out. The number of patients secluded under lock and key was 6, and the number of times seclusion was resorted to was 55, and the longest duration in any single instance was six hours. There were thirteen cases of accidental injury to patients by themselves, three of injury to a patient by another patient, and none by attendants. The first case of suicide during the present Superintendent's tenure of office occurred during the year. Such patients as are well enough are given daily exercise, while others are confined to the airing courts. Outdoor sports (cricket and tennis) as well as indoor games (cards, bagatelle, musical instruments, &c.) are provided. A library is in existence, and those who can read are regularly supplied with books and papers. Two religious services were held in a large work-room, the average attendance being 128. The inmates of the Asylum are employed in gardening, trade, house work, &c., and the proceeds of their industry is formed into a fund, which at the end of the year amounted to Rs. 17,264·31 :—

House of Observation for Suspected Lunatics.—There were four institutions of this nature at Colombo, Kandy, Galle, and Jaffna, into which were admitted for observation 198 patients, which, with 3 remaining from the previous year, made a total of 201, of whom 47 were transferred to the Asylum at Colombo, 144 were discharged, 2 died, and 8 remained under observation at the end of the year.

Leper Asylum, Hendala.—The Leper Asylum received 150 patients for treatment during the year, which, with 278 remaining from the previous year, made the total leper population 428. The daily average in the Asylum was 272·9. Of the total treated, 93 were discharged relieved, 16 not improved, 43 died, and there remained at the end of the year under treatment 276 patients. The Asylum has 296 beds. The water supply is ample and the quality pure and good. There are bath-rooms in connection with the Asylum supplied with hot and cold water according to the requirements of patients. The dry-earth system is in use, the excreta being disposed of by incineration. A new ward with bathroom and latrines for 32 patients and an infirmary with 16 beds for sick patients were added during the year under review.

De Soysa Lying-in Home.—The total number of patients treated at this institution during the year was 499, against 521 in 1900 and 163 in 1890. Of these, 466 were discharged cured, 1 relieved, 4 died, and 19 were remaining under treatment at the end of the year. The daily average sick was 10·77. The percentage of deaths to total treated was ·80 against 2·11 in 1900 and 3·08 in 1890.

In the Lying-in Home ten pupil midwives received training in 1901, of whom nine obtained certificates after passing a satisfactory examination.

The following operations were performed during the year :—

Forceps extractions	103
Version	15
Craniotomy	2
Evacuation	4
Removal of placenta	7
Accelaration of labour by water bags	3
Total ...	134

Lady Havelock Hospital.—In this institution 1,030 patients were treated, against 934 in the previous year. Thirty-eight remained from the previous year and 992 were new admissions. The daily average sick was 32·5. Of the total treated, 768 patients were discharged cured, 137 relieved, and 27 not improved. There were 61 deaths, and 37 remained under treatment at the end of the year. Of the 1,030 patients, 256 were children (113 boys and 143 girls). There were 47 operations performed, with 2 deaths.

Police Hospital, Colombo.—645 patients were treated in the Police Hospital, of whom 631 were discharged after treatment, 1 died, and 13 remained at the end of the year. The daily average sick was 1,392. At the outdoor dispensary of this hospital 1,641 persons were treated during the year, who paid 1,903 visits.

Grenier Eye, Ear, and Throat Infirmary.—At this institution 4,336 cases were treated during the year, as against 3,676 in 1900, 3,165 in 1899, and 3,348 in 1898. The contributions during the year amounted to Rs. 98·43 in 1900, Rs. 71·75 in 1899, and Rs. 63·80 in 1898, and were of a purely voluntary nature.

Branch Hospitals.—Colombo, Kandy, and Galle are provided with a special hospital for the treatment of women suffering from venereal diseases. The total number of new cases admitted was 451, which, with 17 remaining from the previous year, makes a total of 468. Of these, 445 were discharged and 20 remained under treatment at the end of the year. Of the 468 females treated in the three Branch Hospitals, 34 were treated for primary syphilis, 77 for secondary syphilis, 65 for tertiary syphilis, 9 for inherited syphilis, 232 for gonorrhœa, and 51 for other diseases the result of venereal poison.

Jail Hospitals and Sick Prisoners.—The number of prisoners admitted during the year into the different jails in the Island was 13,265. The average daily strength of prisoners was 2,752·71. There were treated during the year in the several jail hospitals 4,638 prisoners, against 4,465 in the previous year. The deaths numbered 112, against 95 in 1899.

The following table gives the number of admissions, number of deaths, average strength, death-rate to admissions to hospitals, and to average strength for the past four years :—

Year.	Admissions in Hospitals.	Number of Deaths.	Average Strength of Prisoners.	Death-rate to Admissions.	Death-rate per 1,000 of Average Strength.
1898 ...	6,128	110	2,848·88	1·79	38·61
1899 ...	4,362	95	2,591·53	2·17	36·65
1900 ...	4,465	102	2,515·14	2·28	40·55
1901 ...	4,638	112	2,752·71	2·41	40·69

Kalmunai Hospital Leper Wards.—At this institution 27 lepers were treated during the year, of whom 16 were discharged relieved, 1 died, and 10 remained under treatment at the end of the year.

Friend-in-Need Society's Hospital at Jaffna.—The Friend-in-Need Society's Hospital at Jaffna received 1,269 patients, which, with 45 remaining from the previous year, made a total of 1,314. Of these, 1,211 were discharged, 39 died, and there remained under treatment at the end of the year 64 patients. At the outdoor dispensary of this institution 6,231 persons were treated during the year, who paid 12,955 visits, and contributed voluntarily Rs. 837·40.

Kanatta Infectious Diseases Hospital.—At this institution 10 cases of infectious diseases remained from the previous year, and 395 were admissions, making a total of 405. Of these, 363 were discharged cured, 29 died, and remained in hospital at the end of the year. The death-rate was 10·24 per cent. Of the 405 patients, 204 were treated for smallpox, 188 for chickenpox, 177 for measles, 3 for whooping cough, 29 for mumps, and 53 for observation for smallpox. Of the 204 cases of smallpox, 35 died. Two cases of smallpox were remaining in hospital from the previous year.

Total Deaths.—The deaths numbered 8,092, against 6,500 in the previous year, showing an increase of 2,592. I subjoin a table showing the death-rate in the various hospitals and asylums in the Island for the year, as compared with the previous year. I have separated the death-rates among the mixed races and Malabars for purposes of comparison :—

Hospitals.	Mixed Races.		Malabars.		Total.	
	1900.	1901.	1900.	1901.	1900.	1901.
Civil	6·54	5·92	17·21	18·06	9·81	9·06
Field	3·30	3·08	8·05	7·40	3·52	3·33
Immigrant	2·54	1·86	7·41	10·48	4·06	4·39
District	5·17	6·28	22·92	28·98	17·80	23·69
Asylums	7·56	12·57	7·55	14·28	7·56	11·54
Total ...	6·00	5·62	19·52	22·94	10·31	12·18

The percentage of deaths to cases treated in the Civil Hospitals showed a slight decrease among the mixed races, and an increase of 1·39 among the Malabars. In the Field Hospitals the decrease among the mixed races and Malabars was slight. In the Immigrant Hospitals the decrease among the mixed races was slight, but among the Malabars there was an increase of 3·07. In the District hospitals there has been an increase of 1·11 among the mixed races and 6·06 among the Malabars. Taking all the Hospitals and Asylums together, there was a slight decrease among the mixed races, but an increase of 3·42 among the Malabars. The percentage of deaths to total treated was 12·18, against 10·31 the previous year.

Duration of Residence.—The longest time any one inmate stayed in hospital was 365 days. This was in the District Hospital at Dikoya, where the patient was under treatment for epilepsy.

Hospital Accommodation.—The accommodation in the hospitals for treatment of the sick was generally sufficient. Overcrowding sometimes occurred, especially in the General Hospital, Colombo, where the daily average sick was 506·31. The large number in excess had to be accommodated in the verandahs and passages. Patients were transferred to Urugodawatta, and 25 cases of incurables were sent to the Victoria Home for Incurables about the end of the year.

Water Supply.—With the exception of the following institutions, Mannar, Galle, Chilaw, Nikaweratiya, and Trincomalee, the water supply in all the hospitals was reported to be good, pure, wholesome, and abundant. Water for drinking purposes is, as a rule, boiled and filtered before use.

Bathrooms.—All hospitals are provided with separate bathrooms for males and females and furnished with tubs, which are filled with hot or cold water according to the requirements of the patients. Patients who can help themselves however prefer to bathe in streams, where there are such adjoining a hospital.

Drains.—There are no covered drains. The drains are all surface ones for carrying away the ward washings, rain, and storm water.

Sewerage.—The conservancy of the latrines is entirely on the dry-earth system, the excreta being removed daily and buried or incinerated at some distance from the hospitals.

Inspection.—The hospitals were all inspected either by me or the Colonial Surgeons of the respective Provinces. The number of these visits of inspection and the official designation of the visitors will be found given in the return of each institution. The books were produced when called for, and were generally found complete and made up to the date of examination. The reports of inspection by the Colonial Surgeons as well as those by me were forwarded to Government when necessary.

Food Supply.—The provisions for the various hospitals were supplied by purveyors on contracts approved by Government. The system works satisfactorily. The medical officers in charge of the respective hospitals examine the food before it is served out to patients, and reject such articles as do not come up to contract samples.

Dispensaries.—369 dispensaries were in operation. Of these, 207 were Civil, 45 District, and 117 Estate. They are distributed as follows:—In the Western Province 31, Central 52, Northern 38, Southern 35, Eastern 18, North-Western 25, North-Central 19, Province of Uva 21, and Sabaragamuwa 20. In the Civil and District Dispensaries there were treated 1,073,993 persons. against 821,174 in the previous year, who paid 1,371,005 visits, and contributed voluntarily Rs. 19,078·82. 117 estate Dispensaries were kept up on the estates by the planters, medicine being supplied free by Government, the resident dispenser, who is paid by the estate, being appointed on the recommendation of the Principal Civil Medical Officer.

Port Duties and Immigration.—The number of vessels which arrived at the port of Colombo was 3,039, against a total of 3,316 in the previous year, 2,562 being steamers, 3 sailing ships, and 474 native craft. The number of native traders was 70,439 and coolies 48,701. Included as traders were 60,408 men, 4,951 women, 3,844 children, and 1,236 infants. Of the coolies, 28,891 were men, 10,216 were women.

During the year one case of plague occurred on board the ss. Parramatta from Bombay. The case proved fatal a few hours before the arrival of the vessel at Colombo, and the body was buried at sea. The vessel was kept in strict quarantine and left for China. Six cases of smallpox, 2 of chickenpox, and 1 of measles were sent to the Infectious Diseases Hospital at Kanatta. The hospital ship was given over to the police, and disinfection is carried out at a station established at Kochchikada; two Thresh's patent steam disinfectors have also been fitted up.

Ragama Camp.—The total number of coolies who passed through the camp during 1901 was 45,823, against 134,134 during the previous year. There were four distinct outbreaks of cholera during the year. Six persons were attacked, all of whom died. These outbreaks occurred during the months of January, March, November, and December. Of the other diseases admitted into hospital, there were 4 cases of chickenpox and 9 cases of diarrhœa. Of the total number of coolies who passed through the camp, 1,890 persons were vaccinated and the rest either had marks of successful vaccination or of smallpox. The drainage system of the camp is efficient. The conservancy is carried out on the dry-earth principle, the excreta being disposed of by incineration. There is a good and ample water supply. A new camp for coolies is under construction.

De Soysa Bacteriological Institute.—Since its opening it has undertaken work of a diverse character, and is now supplying a long-felt want in the Colony by its researches in Bacteriological analyses of tissues, secretions, blood, &c., so indispensable to scientific diagnosis of diseases; and the Director, Dr. Joseph de Silva, who relieved Dr. H. M. Fernando, is consulted by Government Medical Officers and private medical practitioners for reports on specimens submitted by them on Bacteriological and allied subjects.

Medical College.—During the year 9 new medical students and 9 apothecary students entered the College. There were 76 medical and 52 apothecary students at the end of the year. The fees credited to revenue during the year amounted to Rs. 11,975·64. Dr. A. Chalmers, F.R.C.S., was appointed Registrar of the College on 22nd February, 1901, and he has already improved the College very materially.

Civil Medical Stores.—Dr. H. M. Fernando is in charge of this institution as Medical Superintendent. Mr. A. D. Cotton, the Chief Storekeeper, is assisted by two assistant storekeepers, two dispensers, and one clerk, besides a staff of 5 packers, 6 coolies, 1 instrument cleaner, and 1 carpenter. The drugs, chemicals, and instruments received from England amounted to Rs. 178,005·71, from India Rs. 575·20. The cost of articles purchased from the Government Stores and the local market for the preparation of drugs in the Medical Stores came to Rs. 5,574·75, while the cost of repairing surgical instruments amounted to Rs. 85, and that of transport and postage to Rs. 9,575·21, cost of articles purchased locally Rs. 6,135·76, and contingencies and petty expenses Rs. 960·76. The cost

of quinine powders issued to Government Agents and others amounted to Rs. 4,527·13, the sale of medicine to Government Departments and others Rs. 692·50, and sale of medicine to planters Rs. 2,255·23. The sale of unserviceable articles realized Rs. 482·44, and the value of surgical instruments lost and paid for by the officers of the Department amounted to Rs. 46·87.

In 1899 this institution expended under various heads the large sum of Rs. 268,740·56. In 1900 the expenditure diminished to Rs. 238,022, and in 1901 it amounted to Rs. 200,538 only, being nearly 30 per cent. less than the expenditure two years ago, in spite of the fact that new hospitals and dispensaries were opened, and the Railway and Irrigation Departments consumed large quantities of drugs.

Nursing staff :—

Anglican Sisters	3
Roman Catholic Sisters	17
Superintendent of Nurses	1
Matrons	24
Nurses	32
Pupil Nurses, Lady Havelock and Kandy Civil Hospitals	11
Total ...	88

Nursing.—I find it very difficult to get enough pupils for training; the Ceylonese of suitable social position do not take to it. Improved nursing is desirable in the paying wards, General Hospital, and more religious Sisters are necessary for the general wards, especially for night duty.

Strength of the Medical Department.—The strength of the Medical Department was as follows :—1 Principal Civil Medical Officer and Inspector-General of Hospitals, 1 Assistant Principal Civil Medical Officer, 1 Registrar, Medical College, 7 Colonial Surgeons, 1 Superintendent, Lunatic Asylum, 1 Surgeon in charge of the General Hospital at Colombo, 2 Medical Women, 24 Assistant Colonial Surgeons, 27 Deputy Assistant Colonial Surgeons, 46 Sub-Assistant Colonial Surgeons, 24 Probationers, 4 Health Officers, 248 Apothecaries, 1 Chief Medical Storekeeper, 1 Chief Inspector of Vaccination, 6 Inspectors of Vaccination, and 108 Vaccinators.

The change in the Department is the appointment of Dr. A. J. Chalmers as Registrar, Medical College.

The expenditure of the Department, exclusive of working hospitals under the Medical Aid Ordinance, amounted to Rs. 1,339,923·80, including exchange compensation, against Rs. 1,301,865·91 in the previous year. Under Personal Emoluments and Allowances the expenditure was Rs. 313,442·35, including exchange compensation, against Rs. 308,195·45 in 1900. The expenditure under Other Charges was Rs. 1,011,842·41, under Harbour Service Rs. 1,803·22, and under the vote for Plague Precautions Rs. 12,835·82.

The receipts on account of paying patients in hospitals amounted to Rs. 45,225·15. The collections at the Civil Outdoor Dispensaries was Rs. 18,367·36. The cost of medicines issued to the Estates Branch of the Department amounted to Rs. 110,605·77, while the sale of medicines and superfluous articles, Medical College fees, &c., amounted to Rs. 41,682·62. Deducting the receipts under the heads above specified from the expenditure, the net expenditure was Rs. 1,124,042·90.

The following statement shows the expenditure and receipts as compared with 1900 :—

EXPENDITURE.	1900. Rs. c.	1901. Rs. c.	Increase.	Decrease.
Personal emoluments ...	286,985 45	290,055 6	3,069 61	—

Total ...	214,720 45	215,880 90	11,395 3	10,234 58
Net Expenditure ...	1,087,145 46	1,112,535 50		

Prisoners of War.—During the year new camps for Prisoners of War have been established at Ragama, Urugasmanhandiya, and Hambantota, and this Department has supplied all the necessary medical officers, apothecaries, attendants, drugs, and surgical appliances, &c., and it is responsible for the sanitary condition of the camps.

With the exception of the continuance of enteric fever at Diyatalawa, there has been no outbreak of infectious disease among Prisoners of War, and their health has been most satisfactory. The epidemic of enteric fever lasted until the 27th December, when the last case was discharged; the last case admitted was on the 5th December; since December there have been no fresh cases. The total number of enteric cases at Diyatalawa from the commencement of the outbreak until its termination was 711, with a death-rate of 8·72 per cent. The death-rate to total strength from all causes among Prisoners of War for the year was ·078 per 1,000. The death-rate to total strength from diseases other than infectious diseases and accidents was ·03 per 1,000. I would refer to the annual reports submitted by the medical officers in charge of the several camps attached to this report.

ESTATES BRANCH.

During the year 1901 there were 1,753 estates scheduled to 33 districts and 30 sub-districts, with 17 District Hospitals and 27 District Dispensaries and 13 Civil Hospitals and Dispensaries.

The following are the districts and sub-districts with the number of estates scheduled to each:—Avisawella District 46, sub-district Hanwella 10, sub-district Bandaragama 11, sub-district Horana 4; Kalutara District 40, sub-district Horawella 4; Kandy District 69, sub-district Galagedara 14, sub-district Kadugannawa 20, sub-district Hanguranketa 3; Elkaduwa District 21, sub-district Wattegama 29; Kelebokke District 43; Dikoya District 62, sub-district Bogawantalawa 31, sub-district Watawala 39; Maskeliya District 73; Gampola District 52, sub-district Pussellawa 34; Lindula District 56, sub-district Agrapatana 43; Dimbula District 54; Matale District 81, sub-district Rattota 33, sub-district Gammaduwa 18; Teldeniya District 22, sub-district Rangalla 26; Deltota District 40; Nawara Eliya District 37, sub-district Nanu-oya 18; Maturata District 30; Ramboda District 35; Uda Pussellawa District 32; sub-district Mulhalkele 3, sub-district Maspane 1; Nawalapitiya District 49, sub-district Dolosbage 36; Kotmale District 18; Morawak Korale District 181; Balapitiya District 16; Elpitiya District 1; Udugama District 13; Badulla District 59, sub-district Pingarawa 24, sub-district Passara 10; Lunugala District 13, sub-district Madulsima 29; Monaragala District 10; Haputale District 17, sub-district Bandarawela 8, sub-district Haldummulla 23, sub-district Koslanda 27; Kurunegala District 43, sub-district Rambukkana 2; Ratnapura District 23; Balangoda District 33; Rakwana District 25; Kegalla District 22; Karawanella District 64, sub-district Kitulgala 18, sub-district Aranayaka 18.

To attend to the medical wants of the above the following officers were employed:—Deputy Assistant Colonial Surgeons 15, Sub-Assistant Colonial Surgeons 10, and Apothecaries 28.

During 1901 there were 12,017 estate labourers treated in the District Hospitals and Civil constituted District Hospitals, against 11,967 in 1900. Of these, 3,530 died, a death-rate of 29·37 per cent. Of the mixed races, 14,147 were treated, of whom 875 died, a death-rate of 6·11 per cent.

In the Civil Hospitals worked partly as District Hospitals, the death-rate of estate labourers was 28·51 per cent., whilst in the District Hospitals it was 29·67 per cent. The highest death-rate, 46·25 per cent., among estate labourers occurred in the Civil Hospital at Galle, and the lowest, 9·52 per cent., in Mulhalkele. The admissions into the former were 80, into the latter 84.

The total number of days the estate labourers stayed in hospital was 294,713, an average of twenty-four days. Of these, 191,107 persons were paid for by estates, the rest being charged to the fund.

The total number of days mixed races stayed in District Hospitals was 40,657, an average of twelve days.

The total number of estate labourers treated at Outdoor Dispensaries was 78,047. The total number of estate labourers treated on estates was 34,255.

The total number of births reported from estates was 8,837, of which 4,438 were males, 4,231 were females, and 168 were still-births.

The number of deaths reported from estates was 12,087, of whom 6,226 were males, 5,858 were females, and in 3 cases the sex was not stated.

The expenditure under the Medical Aid Ordinance amounted to Rs. 617,204·82, including exchange compensation, and receipts to Rs. 308,922·66, derived from the following sources:—Export duty Rs. 134,800·97, hospital charges for treatment of coolies Rs. 65,278·70, recovered for visits paid to estates Rs. 21,802·50, sale of unserviceable and superfluous articles Rs. 172·42, medicines sold to superintendents of estates Rs. 2,325·81, medicines sold in bulk to superintendents of estates Rs. 2,325·81, and prescriptions compounded Rs. 2,715·18, dispensary collections Rs. 1,281·47, cost of maintenance, medicine, and funeral expenses of other than estate labourers Rs. 72,905·43, recoveries for maintenance of others Rs. 2,526·40. The nett expenditure was Rs. 308,282·16. 117 dispensaries are now established in the planting districts.

Appended are Tables I. and II. showing the receipt and expenditure of the Estates Branch of the Department.

ALLAN PERRY,
Principal Civil Medical Officer and
Inspector-General of Hospitals.

APPENDIX.

PROVINCIAL REPORTS.

(1) WESTERN PROVINCE.

This Province is under the supervision of Colonial Surgeon G. P. Schokman, M.B., C.M., whose report is subjoined:—

Population.—The estimated population of the Western Province for the year was 932,632. The number of births and deaths registered during the year was 30,216 and 20,892 respectively.

Prevalence of Sickness.—The general health of the Province has been excellent. No epidemics of malarial fever were reported, and there was therefore no necessity to employ itinerating medical officers or distribute quinine powders, as was done in the past years. This absence of outbreaks can be accounted for by the uniform distribution of the rainfall and the less severity of the monsoon rains. In my last report I pointed out that the district of Negombo was the most sickly and malarial part of the Province, and that no less than 30,919 had been treated out of a total for the Province of 65,398. Though fever did prevail to some extent in this district, there has been a marked diminution in their numbers, the whole district having been responsible for 10,234 cases.

Dysentery and Diarrhœa.—There was an outbreak of dysentery, which lasted for a month during the last quarter of the year, in some of the villages of the Hewagam korale, viz., Henpita, Jaltara, Bodatuwa, Tarala, and Hanwella. It probably arose from the contamination of the wells in these low-lying villages during the floods of the north-east monsoon rains. This disease also occurred in some of the villages in the Horana district, though not in a virulent form. Four cases of acute diarrhœa occurred on Keratuhena estate.

Cholera.—At the beginning of the year three cases of sporadic cholera occurred in the town of Negombo. These were the last of the outbreak which began in December, 1900. Two of the cases proved fatal. The total number of coolies placed in quarantine at Ragama, as having arrived from infected areas in India, was 2,496. Out of this number six cases of cholera occurred, one in January, two in March, two in November, and one in December. All the six cases died. The excellent arrangements obtaining at the camp prevented any spread of the disease.

Smallpox.—This disease prevailed in the city of Colombo mostly throughout the year. The first case reported was in January from St. Sebastian street. The outbreak continued till the end of September. There were no reports during October and November. Two cases were admitted in December from the north of the city. The origin of the disease was traced to recent arrivals from India. With two cases remaining over from the previous year, there were treated at Kanatta 204, with 35 deaths. Of these, six were admitted from on board ship. None of the latter died. A qualified lady doctor was detailed for a house-to-house visitation in Moor street during the height of the epidemic; she was not successful in discovering any concealed cases.

Smallpox in Villages.—The prolonged outbreak in Colombo resulted in infecting several villages, viz., Akurugoda, Mahamulla, Henamulla, Mathupitiya, Bandaragama, and Moratuwa in the Panadure district; Beruwala and Baruhupola in the Kalutara District; Gangodawila, Kotte, Wataraopola, and Wellawatta in the Colombo District. The following places were also infected:—Migahawatta, Butpitiya, Eppamulla, Hendala, Mugurugampola, Suriyagama, Henaratgoda, Veyangoda, Mirigama, Ja-ela, Kochchikada, and Negombo town.

To combat this widespread distribution of the disease, besides the ordinary vaccinators, a special man was put on duty in the infected villages, guards were placed over the infected houses, and all cases in the outskirts of the city, more especially Peliyagoda, and in the town of Negombo, were removed to hospital.

Those treated in their homes were attended to by the District Medical Officers. With these energetic measures, in a little over two months the disease was stamped out from the villages.

The following are the number of cases of smallpox, modified smallpox, and chickenpox treated and died in this Province during 1901:—

	Total treated.	Total died.
Smallpox	225 ...	58
Modified smallpox	86 ...	1
Chickenpox	419 ...	1
Total ...	730	60

Sanitary Condition of the Chief Towns.

Colombo.—The health of the town, but for the occurrence of smallpox, continued good during the year. There was no cholera. No noteworthy improvements were effected in the drainage or sanitation of the town.

Panadure.—The sanitary condition of the town is not so good as it might be. There is an absence of drainage and public latrines. The water supply is from wells, and to all appearances good and abundant. The cemetery in the heart of the town used for many years has been closed, and a general cemetery opened at a distance from habitations.

Moratuwa.—This town contains a population of 40,000, and is densely overcrowded and insanitary. Houses are crowded together in a small area without any respect to decency or the comfort or well-being of others. There are no public latrines, nor is the dry-earth system in vogue.

House refuse, liquid excreta, and refuse from stables are indiscriminately thrown about. There is an insufficiency of wells, the majority of them are shallow and liable to pollution. A private association is reported to look after the sanitation, but the establishment of a Local Board of Health is imperative. General cemeteries are required outside the town; those in the midst of the population should be closed. More roads are needed, and they should be opened from the beach straight inland, so as to ensure a free circulation of air.

Kalutara.—There is a Local Board here. Some improvements have been effected in the town. The cesspits attached to the public latrines have been filled up and replaced by dry-earth latrines. Side drains have been built along several streets, and the general drainage of the town extended.

Negombo.—This town is overcrowded, and contains a population of 19,949. There is a Local Board, but improvements are progressing slowly. It is low and swampy. Water supply bad. Drinking water is procured from wells outside the town, and is of good quality.

Avisawella.—There are no public latrines. Drainage good, but requires extension. Water supply good.

Minuwangoda.—The example set by this rising place in possessing a Sanitary Board might well be followed by more important places as Moratuwa and Panadure. The drainage and water supply are good, but public latrines are wanted.

Other Institutions.

The Jails.—The convict prisons were maintained in a good sanitary condition. The drainage of Welikada was extended. The water supply in the Colombo prisons is from the town service. The water is boiled for drinking. At Mahara water is drawn from a well, and is of good quality. Here, too, the water is boiled.

The general health of the convict prisons was satisfactory. There was overcrowding owing to a considerable increase in the prison population. The average strength of the prisons for the years 1899, 1900, and 1901 was 1,476·97, 1,388·49, and 1,712·50; the average sick 90·32, 102·39, and 120·63; and the percentage of deaths to the strength 4·06, 4·39, and 4·67. The total number of deaths during the year was 80, as against 62 in the previous year. The excess in the number of deaths is mainly attributable to the increase in the strength of the jails over that of the previous year, and to two outbreaks of influenza, followed by pneumonia, which claimed 33 out of the 80 deaths. The prevalence was particularly noticed in the Mutwal prison in the months of August and September, when several deaths occurred. Certain suggestions for improving the ventilation of the wards and the alteration of the hour for unlocking the prisoners have been made, which are being carried out, and it is hoped will have the effect in lessening or at least modifying these recurrences in the future. Dysentery and diarrhœa, the scourge of the prisons, continued to prevail in the same proportions as in previous years. The Mahara jail was enlarged by the addition of four wards, and the accommodation increased to 600.

Neboda.—This hospital almost exclusively admits estate labourers, and the mortality is always high. There were 261 deaths, with a percentage mortality of 30. The Medical Officer states that the estates contributing mostly to the mortality are Gikiyanakanda and Pantiya.

Negombo.—The accommodation provided at this hospital is more than sufficient for present requirements of the district. The total number of admissions were 798, against 1,002 of previous year, and the percentage of deaths to total treated 8·37 against 8·86. The largest mortality was from diarrhœa, malarial cachexia, and debility.

Vaccination.

53,310 persons were vaccinated in the Western Province (45,439 primary and 7,871 re-vaccinations), against 34,764 (30,673 primary and 4,091 re-vaccinations) in the preceding year. This large increase of 18,546 in the work done was due to the absence of fever epidemics in any part of the Province.

A classification of the primary vaccination into races gives the following figures:—Sinhalese 36,278, Tamils 3,654, Moors 2,893, Malabars 1,273, Burghers 594, Malays 153, Europeans 21, others 373. Many of the European and Burgher children are vaccinated by private medical practitioners, and these do not appear in our registers.

Of the 45,439 primary vaccinations, 24,778 were males and 20,661 females; of these, 259 were infants, 39,793 children, and 5,387 adults. The ratio of success to those inspected were for primary vaccinations 95·91, re-vaccinations 80·34.

In the city 16,497 persons were vaccinated, an increase of 5,830 over the previous year. At the itinerating vaccine depôt 3,908 persons were vaccinated direct from the calf.

---

(2) CENTRAL AND NORTH-CENTRAL PROVINCES.

These Provinces are under the supervision of Colonial Surgeon J. Craib, M.D., whose report is subjoined:—

In submitting my annual report for the year 1901, I have the honour to state that the health of the two Provinces under my supervision has been very satisfactory.

There have been no epidemics of infectious diseases during the year. A few sporadic cases of smallpox occurred in the planting districts, the source of infection in each case being from the coast of India. They were isolated and segregated, and within a very short time the disease was stamped out. Measles and chickenpox were reported from different districts throughout the year.

Population.

The estimated population for the year, as per figures obtained from the Registrar-General, is as follows :—

	Central Province.	North-Central Province.
Population (at the middle of 1901)	622,817	79,054
Births registered, 1900	21,262	3,168
Do. 1901	20,129	3,797
Deaths registered, 1900	18,299	2,902
Do. 1901	18,719	3,041
Birth-rate per 1,000, 1900	34·8	40·2
Do. 1901	32·3	48·3
Death-rate per 1,000, 1900	29·9	36·8
Do. 1901	30·1	38·5

Prevalence of Sickness.

The diseases most prevalent during the year under review were malarial fevers, parangi, diarrhœa, dysentery, pneumonia, rheumatism, catarrhal affections, and cutaneous diseases.

Malarial Fever is endemic in the North-Central Province, but prevails to a great extent after the burst of the north-east monsoon, the types most prevalent being quotidian and tertian. The greatest sufferers were those living in low-lying and swampy districts. There was no epidemic of fever in either of the Provinces during the year under review, necessitating the employment of additional officers on this particular duty.

Parangi.—This disease prevails to a great extent in the North-Central Province and in the adjacent parts of the Central Province. Malaria and parangi prevail side by side, and with the decrease of malaria, and the improvement in the general health of the inhabitants, parangi will necessarily decrease.

Diarrhœa and Dysentery prevailed during the wet season, and is attributable to the changes of temperature, and frequently to partaking of unwholesome food and impure water. It never assumed an epidemic form.

Bronchitis, Pneumonia, and Rheumatism prevailed during the cold and wet seasons, caused by the sudden variations of temperature.

Anchylostomiasis occurs, and is often treated in Malabars from estates. From my experience I have every reason to believe that it is undoubtedly an imported disease. It has now found its way to the villages adjoining estates, the cause being pollution of water by fæcal matter.

Meteorological Conditions and their effect on Public Health.

During the wet months of the year in the Central Province bowel complaints, rheumatism, and catarrhal affections prevailed to some extent.

In the North-Central Province malarial fever occurs after the burst of the north-east monsoon. To a great extent it is endemic in the North-Central Province.

Particular Diseases.

Smallpox was imported into Dikoya, Kelebokka, Maskeliya, Maturata, and Dimbula districts. Twenty-five cases were reported, with 4 deaths. On every occasion the Colonial Surgeon inspected the scenes of the outbreak and took all precautions, with the result that in no instance did it assume an epidemic form.

There were no cases of cholera reported in the two Provinces under my charge.

Chickenpox was reported from time to time in the Central Province.

Measles.—A few sporadic cases occurred in the Provinces.

Mumps.—A few cases were reported from the Kandy jail and the towns.

Enteric Fever.—This disease has, on the whole, been on the decrease during the year.

Sanitation.

The general sanitary condition of the two Provinces under my charge remains much the same as last year, and is fairly satisfactory.

In the villages there is no proper drainage system, no water supply, and no proper latrine accommodation. The Board of Health of the Central Province is year by year gradually improving the sanitary condition of larger bazaars, and is thus introducing more efficient measures, both as regards their general surroundings as well as the conditions under which the bazaar populace exists. The necessity of observing general cleanliness is being regularly and extensively enforced by the supervision exercised by the medical officers of the different stations. Overcrowding is reduced as much as possible, stagnant pools in the vicinity of dwelling-houses are drained, and swamps are filled up, thus obviating any tendency to the existence of malarial diseases. Similar pools and swamps, however, that form the permanent features of the low-lying parts of the Provinces cannot be likewise treated. The drainage of the hilly portions of the Provinces is, on the whole, very satisfactory.

Water Supply.—Natural springs and rivers furnish a sufficient supply for domestic purposes, which is comparatively free from surface pollution. The same cannot, however, be said of wells where they exist, as they are seldom protected from surface contamination.

The following are the chief towns and bazaars of the Central Province :—

Kandy.—Water supply good and abundant, and derived from an unpolluted source. Drainage remains unimproved. A scheme for its improvement was submitted to Government, but, beyond taking levels and surveying the town, it has not advanced any further.

Alleys: These are characteristically insanitary.

Latrines: Owing to the absence of facilities the dry-earth system cannot be introduced throughout the town, but whenever possible undesirable cesspits are either abolished or rendered less insanitary.

Waste Lands: The condition of the uncultivated lands adjoining houses has been materially improved by the systematic removal of all decaying vegetation and undergrowth.

Lake: The sides of it were deepened, and the silt was removed by means of a dredger during the year.

Bakeries, Laundries, Eating-houses, and Slaughter-house: These are regularly visited by the Municipal authorities, and are kept in a fairly sanitary state.

Scavenging: There has been a general improvement with regard to the conservancy of the town.

Infectious Diseases: Every precaution is taken by the Municipal authorities for the due notification of all infectious diseases occurring in the town.

Matale.—Drainage defective. Water supply insufficient, especially towards the Chetty boutiques, where water pipes might be laid with considerable advantage. Numerous cesspits still exist, and they should be replaced by the dry-earth system by degrees. There is no overcrowding.

Gampola.—Drainage is still unimproved. Water supply is deficient, and a scheme for its efficient supply is under consideration. Three public latrines were erected during the year. Cesspits continue to exist. No overcrowding.

Nawalapitiya.—Water supply is pure and abundant, and is conducted into the town by pipes. The drainage was improved to some extent, though much still remains to be done in this respect. Two public latrines were erected. No overcrowding.

Nuwara Eliya.—The water supply is pure and abundant. The drainage continues to be defective. The latrine accommodation is insufficient. There is no overcrowding.

Hatton.—A well provides at present the water supply of the town, and this is frequently polluted by surface drainage. A scheme for providing a pure and better water supply is under consideration. The drainage is defective. Two Horbury latrines have already been provided, but these have proved insufficient, necessitating the erection of two more. There is slight overcrowding.

Dikoya.—Water supply ample, but is open to improvement. The drainage has been receiving attention. Latrine accommodation is insufficient. Scavenging of the town has been given on contract, and is satisfactorily performed. No overcrowding.

Maskeliya.—Water supply is sufficient. Drainage defective, and no improvements were effected during the year. Latrine accommodation absent. There is no overcrowding.

Kotiagala.—The drainage system is under improvement. Water supply sufficient, but requires improvement. Latrine accommodation is insufficient. No overcrowding.

Talawakele.—Water supply for flushing purposes is insufficient, but a scheme for bringing a better and larger supply from an adjoining estate to meet all requirements is under consideration. Latrine accommodation is insufficient. There is slight overcrowding periodically.

Lindula.—Drainage defective. Water supply sufficient, but requires improvement. Latrine accommodation insufficient. No overcrowding.

Tillicoultry.—Water supply is sufficient for flushing purposes, if properly laid on. Drainage defective. Latrine accommodation nil. No overcrowding.

Nanu-oya.—Drainage is bad, and no improvement has been effected since my last report. Water supply both deficient and impure. No overcrowding. Latrine accommodation insufficient.

Kadugannawa.—Drainage was improved during the year. There is no latrine accommodation, which is very much required. Scavenging is daily attended to. Water supply is insufficient. No overcrowding.

Rattota.—Drainage is defective. Latrine accommodation is absent. Water supply sufficient. No overcrowding.

Dambulla.—Drainage defective. Latrine accommodation is much needed during the season of pilgrimages. Water supply insufficient. No overcrowding.

Wattegama.—Drainage should be improved, and latrine accommodation provided. Water supply is insufficient. A scheme is being considered to provide the town with pure water. No overcrowding.

The chief bazaars in the North-Central Province are Anuradhapura and Mihintale.

Anuradhapura.—Drainage is still defective, but it is yearly being improved. Latrine accommodation is still insufficient. The town is overcrowded only during the pilgrimages, at which time temporary latrine accommodation is provided, and every precaution is taken with regard to the conservancy of the town.

Mihintale.—Nothing has been done since my last report for the improvement of the drainage and for providing latrine accommodation, as well as supplying the town with pure water.

Vaccination.

During the year under review vaccination was carried on in the Central and North-Central Provinces. In the Central Province at fifteen dispensaries by the medical officers and apothecaries in charge, and in the North-Central Province at two dispensaries by apothecaries. The female, vaccinator operated amongst the Moorish and the other communities in the towns of Kandy, Matale, Gampola, Nawalapitiya, and Hatton.

The total number vaccinated for the year was males 11,115, females 10,675, total 21,790. There were 712 re-vaccinations with a percentage of 58·22 successes and 21,790 primary vaccinations with a percentage of 95·18 successful results.

Animal Vaccine Depôt.

This has proved a continued success. During the year 56 calves were vaccinated, with 1,420 successful vesicles. 1,452 tubes of lymph were collected, and 1,486 were issued to the several vaccinators in the two Provinces, and, except in a few isolated cases, their use showed very satisfactory results.

Jails.

Jails and Jail Hospital, Kandy.—The number of prisoners accommodated in the jails at Kandy was as follows :—

	No. of Prisoners.	Daily Strength.
Bogambra Jail	2,402 ...	409·57
Old Jail	2,104 ...	61·46

There was no overcrowding in either of the jails. The diseases most prevalent amongst the prisoners were malarial fever, bowel complaints, respiratory diseases, and eye affections. Chicken-pox was imported from outside and assumed an epidemic form ; these cases were at first transferred to the infectious diseases hospital, but when the accommodation was no longer available the prisoners were isolated in the association ward. During the epidemic the transfer of prisoners to and from the jail was stopped. Sixty-eight cases of conjunctivitis were treated during the year.

The general health of the prisoners during the year was, on the whole, satisfactory. Nineteen prisoners were transferred on recommendations of Medical Boards to other jails. The number treated during the year was 634. The daily average sick was 15·58. The percentage of deaths to total treated was 2·20.

Jail, Anuradhapura.—During the year the number confined in this prison was 175. The daily average was 13·36. Thirty-one cases were treated during the year. The average sick was ·66. Diseases most prevalent were dysentery, ague, conjunctivitis, diarrhœa, malarial cachexia, and debility. There has been no death in this jail since April, 1896.

Jail, Nuwara Eliya.—The health of this jail has been satisfactory. Forty-two cases were treated during the year, percentage of deaths to total treated being 4·76, daily average sick being ·80.

Hospitals and Dispensaries.

Most of the institutions in the two Provinces were visited by me at least once in the year, and some of them several times. The following institutions require rebuilding, viz., Dikoya, Kelebokka, and Uda Pussellawa. All the others are in a fair state of repair.

The following new hospitals were opened during the latter end of the year, viz., Pussellawa and Dimbula. The new hospital at Maturata will be opened early in 1902.

The temporary wards at Matale and Gampola are in a dilapidated condition, and should be replaced by buildings of a permanent nature. Two new wards were erected by the Railway authorities at Anuradhapura hospital for the treatment of the sick employés of the Railway Extension during the year. A new dispensary has been constructed and will be opened early in 1902 at Madugoda.

Nursing.

I deeply regret to record the death of Sister Maude, the Lady Matron of the Government Civil Hospital, Kandy, which occurred during the voyage to England. Under her supervision most of the nurses in the Central Province were trained. She took a great interest in her work, and was much respected by all who came in contact with her. The vacancy caused by her death was filled up by Sister Eustacia, whose place was taken by Sister Stella.

---

(3) NORTHERN PROVINCE.

This Province is under the supervision of Colonial Surgeon H. A. Moraes, L.R.C.P. and L.R.C.S., whose report is subjoined :—

I have the honour to submit my report of the Northern Province for the year 1901.

Population, Births and Deaths, &c.

The population of the Province for the year has been estimated at 352,938. The number of births registered was 14,587 and deaths 8,967. The birth-rate per 1,000 was 41·33, and the death-rate 25·40.

The following table furnished by the Provincial Registrar gives particulars for each of the three districts :—

		Jaffna.	Mannar.	Mullaittivu.
Population ...	1901 ...	312,867 ...	24,885 ...	15,186
	1900 ...	307,016 ...	25,396 ...	15,174
Births ...	1901 ...	12,985 ...	942 ...	660
	1900 ...	11,723 ...	1,059 ...	686
Deaths ...	1901 ...	7,134 ...	1,185 ...	648
	1900 ...	7,259 ...	1,031 ...	576
Birth-rate per 1,000 ...	1901 ...	41·1 ...	37·85 ...	43·46
	1900 ...	38·1 ...	41·69 ...	45·21
Death-rate per 1,000 ...	1901 ...	22·1 ...	47·61 ...	42·67
	1900 ...	23·6 ...	40·59 ...	37·96

The above table shows that the population has increased by 5,352 over that of the previous year. The Jaffna District shows an increase of 5,851 and the Mullaittivu District of 12; while the Mannar District shows a decrease of 511.

The number of births also exceeded that of the previous year by 1,119. The Jaffna District is the only one of the three districts which shows an increase, viz., 1,262 ; but the Mannar District shows a decrease of 117, and the Mullaittivu District a decrease of 26.

The number of deaths shows a slight increase, being 8,967 against 8,866, an increase of 101. The Jaffna District is the only one which shows a decrease, viz., of 125 ; while the Mannar District shows an increase of 154 and the Mullaittivu District an increase of 72. The first and second quarters of the year in the Mannar and Mullaittivu Districts were those in which the largest mortality occurred, and it was due to the prevalence of fever, chest, and bowel complaints.

The birth-rate per 1,000 in the Jaffna District shows an increase of 3, and the death-rate a decrease of 2·5 ; in the Mannar District the birth-rate shows a decrease of 3·84, and the death-rate an increase of 7·02 per 1,000 ; and in the Mullaittivu District the birth-rate a decrease of 1·75 and the death-rate an increase of 4·71.

Prevailing Diseases.

The most prevalent diseases were malarial fevers and their sequelæ, diseases of the digestive and respiratory systems, parangi, rheumatic affections, ulcers, and venereal diseases.

Malarial Diseases.—The principal of these is fever. It prevails more or less throughout the year, but more especially towards the beginning of the first and the end of the last quarters. It was slightly in excess of the previous year. The returns from the several hospitals and dispensaries show that 40,831 cases were treated, against 39,845 the previous year, or an increase of 986. This works out about 115 per 1,000 of the estimated population. It was generally of the intermittent type, chiefly quotidian, though cases of the remittent type also occurred. 9,502 cases were treated at the seven hospitals in the Province and 31,329 at the several dispensaries. The largest number was at Pallai, viz., 4,893, and then Valluvettitturai 2,668, Murungan 2,213, Sillavaturai 2,202, Jaffna 1,964, and Mankulam, Mannar road, 1,568.

Dysentery and Diarrhœa were reported from all the stations, and they were slightly in excess of the previous year. The number treated was 3,133.

Ulcers and other Skin Diseases were also reported from all the stations.

Respiratory Diseases occurred in many stations. The chief of these, pneumonia, was reported from twenty-five stations, the largest numbers being from Vavuniya and Pallai.

Venereal Diseases.—Valluvettitturai, as usual, heads the list with 165, then follow Kankesanturai and Pallai with 89 each.

Parangi.—This disease still prevails to a great extent, especially in the Wanni. Cases were reported from twenty-two stations.

The number of cases treated was less than the previous three years, being 1,582, against 1,869 in 1898, 1,667 in 1899, and 2,220 in 1900. Of the 1,582 treated this year, 528 were in hospitals and 1,054 at the dispensaries.

The prevalence of the disease is attributed by the several medical officers to bad food, bad water, and insanitary habits of the people.

Leprosy is not prevalent in this Province. Only 7 cases were treated in the hospitals and dispensaries.

Anchylostomiasis is not prevalent in this Province, the only station where it is found to any extent being Valluvettitturai, from where 26 cases were reported.

Epidemic Diseases.—I regret to report that both cholera and smallpox broke out in the Province. Kayts was unfortunately visited by both the epidemics, and Achchuvelly by cholera, and Valluvettitturai by smallpox, where, however, there was a solitary case.

Relative Mortality in the different Seasons.

There are practically two seasons in this Province, the wet and the dry. The wet season begins with the setting in of the north-east monsoon in October and continues till December, when the nights become chilly and dewy and the days begin to get warm. The dry season begins with the setting in of the south-west monsoon in May and lasts till September, though occasional showers of rain are not uncommon during this period. The dry season is the healthiest.

The first quarter is the unhealthiest period of the year, and the mortality is highest then. The second quarter comes next, and the mortality begins to rise in the fourth quarter.

Meteorological Conditions and other Causes affecting the Public Health.

The climate of the Northern Province is generally hot and dry. The monsoon rains reduce the temperature to some extent, but the public health suffers at this season owing to the outbreak of fever.

General Sanitary Condition of the Province.

The only town in the Province in which some system of sanitation is carried on is Jaffna, and even here the system is open to vast improvement. Such a large, thriving, and populous town as this—the chief town of the Province, and which will soon have a railway—is without a Municipality or even a Local Board.

The water supply of Jaffna is very unsatisfactory. The chief and only source is wells. Most of these are seldom cleaned. With the exception of a very few, the water of which is fairly good, that of the others is hard, brackish, and undrinkable.

Vaccination.

Vaccination was carried on throughout the year. The number of vaccinators employed was seven. The work of the vaccinators was frequently inspected by the Inspector of Vaccination and found to be satisfactory. Vaccination was also carried on by the several medical officers and apothecaries at their respective stations.

During the year 13,780 subjects were vaccinated, which is less by 1,416 than the previous year. Of these, 7,075 were males and 6,705 females; and 13,116 children and 664 adults. Of the total number, 8,577 were vaccinated by the vaccinators and 5,203 by the medical officers and apothecaries. There were altogether 11,780 successful, 1,389 unsuccessful, and 611 unknown. The number of re-vaccinations was 574, of which 380 were successful and 194 unsuccessful. The percentage of successful primary vaccinations was 85·48, and of re-vaccinations 66·20.

The preparation of calf lymph at the depôt was carried on throughout the year, with satisfactory results.

Other Observations.

Jail.—The Jaffna jail is the only one in this Province. There is accommodation for 217 prisoners. The hospital consists of two wards, with six beds in each. There is no separate hospital accommodation for females.

The total number of admissions into the jail was 410, being less than the previous year by 200. Of these, 201 were local convictions, 189 from other prisons, and 20 on confirmation of sentence.

There were 61 admissions into hospital, compared with 74 the previous year. Of these, 10 were for malarial fevers and 7 each for dysentery and diarrhœa. The others were for ordinary ailments. Two deaths occurred. The general health and sanitary condition of the jail was very satisfactory.

Plague Precautions.—The precautions which were taken in 1899 were rigorously adhered to. No Indians, whether passengers or crew, are on any account allowed to land. There were three prosecutions for passengers attempting to land. The total number of vessels inspected at Kayts was 823.

Hospitals and Dispensaries.—There were 2,345 admissions into the hospitals in the Province. The daily average was 95·50, ranging from 2·37 at Pesalai to 21·85 at Mullaittivu. The average residence was 12·55, the average at the different hospitals being 10 to 17. Point Pedro hospital was overcrowded throughout the year, and Vavuniya on a few occasions. The total number of deaths was 106, ranging from 1·64 per cent. at Point Pedro to 6·62 per cent. at Mannar.

At the dispensaries in charge of apothecaries 61,354 received treatment, and at those attached to hospitals 19,962, making a total of 81,316 persons, who altogether paid 129,673 visits.

---

(4) SOUTHERN PROVINCE.

This Province is under the supervision of Colonial Surgeon W. G. Keith, M.B., C.M., whose report is subjoined :—

Hospitals ...	Civil	5
	District	1
Dispensaries ...	Civil	32
	District	3
House of Observation		1
Jails		4
Estimated population		561,315
Birth-rate per 1,000		41,584
Death-rate per 1,000		26,610
Number of successful vaccinations		19,769
Number of estates scheduled to hospitals and dispensaries		48
Number of cases of smallpox		8
Number of cases of cholera		Nil

The estimated population of the Southern Province for 1901 and for 1900 are given below, and will show the increase or decrease in the birth- and death-rates :—

Year.	Estimated Population.	No. of Births.	No. of Deaths.	Birth-rate per 1,000.	Death-rate per 1,000.
1900 ...	540,902 ...	23,931 ...	15,152 ...	44·242 ...	28·012
1901 ...	561,315 ...	23,342 ...	14,937 ...	41·584 ...	26·610

The general health of the Province during the year was satisfactory, and there were no outbreaks of any disease in an epidemic form. No cholera appeared in the Province, and only a few cases of smallpox, which were at once stamped out. All these cases had been introduced from Colombo.

There was the usual prevalence of malarial fever at certain seasons of the year in certain stations, and dysentery appeared in some localities, also at certain seasons to a great extent, but could not be said to be epidemic, and the mortality did not appear to be unusual.

Malarial fever seems to prevail, as usual, after the monsoon rains, especially during the north-east monsoon. The general character of the fever during the year under review was milder than in the year previous, and it did not prevail to such a great extent. In Tissamaharama and Hambantota it was severe in the first and last quarters of the year, but even here there was an improvement compared with the previous year.

Dysentery.—This disease prevailed in some districts more than others, and especially in Balapitiya, Udugama, and Weligama. An itinerating officer was employed in these districts till the disease disappeared. He was thus employed on two occasions, from January to May and in October and November. The number reported by him was 198. The Medical Officer, Balapitiya, draws attention to the fact that dysentery prevailed about the same time, and followed closely the characters presented by malarial disease, in its incidence, decrease, and decline, and this has been noticed before.

Parangi is reported from several districts to be on the decline and of a milder type, due no doubt to the general improvement in sanitation, and the earlier attention to the cases by the medical officers at the dispensaries. Matara, Weligama, Hakmana, and Akuressa were the districts where the disease was most prevalent.

Anchylostomiasis.—This disease was prevalent chiefly in estate districts, introduced no doubt by immigrant coolies. I notice, however, that the Medical Officer of Tangalla has reported a large number of cases as treated at the dispensary there, the persons seeking relief there being chiefly Sinhalese. The largest number of cases were treated at Deniyaya amongst Malabars from the estates, and caused a good deal of mortality. The disease also prevailed amongst coolies in the Elpitiya estate district. I directed the medical officers' attention to this subject, and requested them to impress on the superintendents of estates the necessity for perfect sanitation of the cooly lines and their surroundings, and special attention being paid to immigrant coolies freshly arrived, as regards the latrine accommodation and prevention of contamination of the water supply.

Measles appeared chiefly in the Weligama and Nagoda districts.

Chickenpox.—This disease prevailed from time to time.

Smallpox.—Of this disease, there were in all 8 cases in the Province during the year. They were single cases in different centres, and it is a notable fact that in not one of the instances did the disease spread, although the cases were seen mostly at a late stage.

At the dispensaries the most prevalent diseases treated at various stations appear to have been dysentery, malarial fever, rheumatic affections, and parangi.

Leprosy.—The number of lepers in the Province reported by the different medical officers was 22, but there will no doubt be more accurate information on this subject when, according to the provisions of the new Ordinance, all suspected cases are reported to the medical officers and inspected by them at the orders of Government.

The mortality has not been great during the year, as the general health has been satisfactory. It was greatest during the months when fever and dysentery occurred, namely, the first and last quarters of the year.

The general sanitary condition of the Province is, on the whole improved, but a good deal remains to be done, especially in the outlying districts, where the people are apathetic, and headmen do not appear to insist on their attention to the surroundings. The general complaint of the medical officers is that sanitary requirements are unattended to, gardens are allowed to be overgrown with jungle, accumulations of filth allowed to exist, absence of proper wells and a good water supply, want of latrines, and the contamination of surface wells by the drainage of polluted gardens, and the want of proper burial places.

Of the chief towns in the Province, Galle is looked after, as to its sanitary wants, by the Sanitary Officer of the Municipality, who reports that the general health during the year was satisfactory. A few cases of measles and chickenpox occurred in each quarter, and some cases of dysentery in the last quarter. In the first quarter a house was engaged, and is now a house of observation, where cases that were in contact with two of the cases of smallpox already referred to by me were removed. In the third quarter the two cases of smallpox that occurred at Kaluwella and Gintota were discovered after they had arrived from Colombo, and the prompt measures taken prevented the spread of the disease. The Fort is being gradually improved as to its sanitation, two new streets having been opened, and thus the dry-earth system being enabled to be introduced into a good many more houses. A good deal has still to be done to improve the state of matters outside the Fort. The sea beach, which extends along the Matara and Colombo roads, is a good deal polluted, and public latrines are much needed.

Steps were taken during the year to improve the surroundings of the reservoir at Bikke by the cleaning of the catchment area and freeing it from weeds, &c.

Matara.—The sanitary state of this town is, on the whole, satisfactory.

Tangalla.—This town is also in a fairly satisfactory sanitary condition, but the water supply is very defective, and at times of drought much inconvenience has been caused.

Hambantota.—This town has been much improved recently by the addition of new buildings, but a good deal is still required to be done to improve the drainage. Public latrines are also required and a good supply of water. The present supply from surface wells at the foot of the sand dunes is precarious, and the water somewhat brackish.

Balapitiya.—The Sanitary Board was established during the year, and already there are some signs of improvement. Lamps have been supplied, and the streets are now lit at night. An Inspector has been appointed, and it is to be hoped that the place will soon be in a much more sanitary state than was the case in former years.

Hospitals.

Government Civil Hospital, Galle.—In this hospital malarial fever and malarial cachexia and dysentery were treated throughout the year. The mortality was higher in the second half of the year. The highest mortality was from dysentery, malarial cachexia, diarrhœa, dochmius duodenalis, and phthisis. The humid atmosphere during the south-west monsoon, giving rise to chills, was the cause of an increase in respiratory and digestive disorders.

Several much-needed improvements are now about to be carried out, the chief being a new ward on the site of the old kitchen, which will add to the accommodation for females on the ground floor, and the conversion of a ward upstairs into nurses' quarters; also the erection of a new kitchen and enclosing the premises with an addition to the boundary wall. It is proposed also to improve the drainage and latrine arrangements, which are defective.

Matara Civil Hospital.—In this hospital parangi, ulcers, malarial fever, and malarial cachexia were the chief diseases treated. Some minor alterations and improvements have been effected here.

Tangalla Hospital.—Parangi, injuries, malarial fever, and malarial cachexia were chiefly treated here. A surgical ward and dispensary and apothecary's quarters, which have been much needed, are now about to be erected, and will be a decided improvement to the hospital.

Hambantota Hospital.—Malarial fever and malarial cachexia, parangi, dysentery, and diarrhœa were the chief diseases treated here.

Balapitiya Hospital.—Here the diseases chiefly treated were malarial fever and malarial cachexia, dysentery, and diarrhœa. The largest number of patients were for injuries.

Deniyaya District Hospital.—The patients chiefly treated here were labourers from the estates in the district, and the diseases were chiefly dysentery (104 cases, with 75 deaths), malarial fever and malarial cachexia, parangi and diarrhœa, and dochmius duodenalis. Of the last-mentioned disease, there were 106 cases treated, with 44 deaths. The mortality is due to the fact that the cases are generally too far advanced for treatment to have any effect.

Jails.—There were four jails in the Province during the year, those at Galle, Matara, Tangalla, and Hambantota, and the hospitals attached to them were attended to by the medical officer of the station, except that of Galle, of which Dr. Pestonjee is the medical officer. In the latter part of the year the Hambantota prison was converted into a camp for the prisoners of war.

Kaluwella Hospital for Women.—This is a lock hospital, where 103 patients were treated, the diseases being of the usual character.

House of Observation, Galle.—There were 40 inmates in this institution during the year, and mania was the chief disease. The number transferred to the asylum was 20.

Infectious Diseases Hospital, Galle.—The cases treated here were smallpox, chickenpox, and measles, 13 being treated, with 1 death from confluent smallpox.

Plague Hospital.—During 1901, as in the year previous, no cases of plague were admitted. One seaman from a vessel in quarantine was kept here under observation till the number of days for quarantine were over.

The buildings are in good order and always in readiness. Arrangements are being carried out to have proper disinfection of coolies and others working on vessels in quarantine. A building known as "Trinity House" is being fitted up, and a disinfector has been supplied.

Vaccination.—Twelve vaccinators were employed vaccinating in the Province during the year. A female vaccinator was stationed in the Galle District and worked chiefly amongst the Moorish community in house-to-house vaccination. A calf vaccinator is connected with the vaccine establishment, and he vaccinated regularly at the outdoor dispensary under the supervision of the medical officer. Besides these vaccinators, at each dispensary in the outstations vaccination was carried on once a week.

The total number of vaccinations in the Province during the year was 24,440, with a percentage of successful cases of 79·65.

The animal vaccine establishment has been worked satisfactorily. Lymph supplies have been issued to medical officers and vaccinators regularly.

The state of vaccination in the Province I consider, on the whole, to be satisfactory. I have no doubt that the people are well protected, especially the populous places, from smallpox. I have frequently on my travels on inspection duty in the interior noticed in passers-by the satisfactory marks of vaccination, and make it a point to examine the arms of adults and children whenever possible in villages, and I have been satisfied with the large numbers showing marks of satisfactory vaccination. It is also a notable fact that, though cases of smallpox of a confluent type occurred in different localities during the year under review, as well as in the previous year, there was no spread of the disease amongst the population.

---

(5) EASTERN PROVINCE.

Hospitals ...	Civil ...	3
	Leper ...	1
	Field ...	1
Dispensaries ...	Permanent ...	11
	Visiting ...	10
Area of Province, square miles		4,037
Population ...		174,226
Birth-rate per 1,000		43·16
Death-rate per 1,000		31·98
Number of cases of cholera in 1901		Nil
Number of cases of smallpox in 1901		Nil
Number of successful vaccinations		6,896

This Province has been under the supervision of Colonial Surgeon J. H. Ebell, L.R.C.P. and L.R.C.S., for a period of seven months only, as he assumed duties as Colonial Surgeon on the 2nd June.:—

Return of Population.

Year.	Population.	No. of Births.	No. of Deaths.	Birth-rate per 1,000.	Death-rate per 1,000.
900 ...	170,423 ...	7,278 ...	5,318 ...	42·70 ...	31·20
901 ...	174,226 ...	7,515 ...	5,572 ...	43·13 ...	31·98

From the above table it will be seen that there has been an increase of 3,803 over the population at the end of 1900. Batticaloa shows an increase of 1,557 and Trincomalee 2,246.

The total number of births in the Province exceeded the deaths by 1,943. On comparing the total number of births and deaths registered, I find that there has been an increase under each head in 1901, but the birth- and death-rates for the two years 1900–1901 are about the same.

Prevalence of Sickness.

The general health of the Province during the year under review should be considered to be on the whole very satisfactory. The diseases most prevalent were malarial fevers and their sequelæ, parangi, and catarrhal affections.

Malarial fevers prevail throughout the whole Province, and large numbers have been treated both in the Trincomalee and Batticaloa Districts. During the year malarial fever assumed an epidemic form at Kattankudi, a Moorish village about 4 miles from Batticaloa, where there was a sharp outbreak. This village is a densely populated one and overcrowded, within an area of about ¾ of a square mile; there are about 2,157 houses—or more properly huts—inhabited by 9,418 persons. The disease was at its height about the end of April, and it was found necessary to employ additional officers to itinerate and afford relief to the sufferers. The total number of fever cases treated at the Kattankudi dispensary during the whole year was 6,774, of which no less than 5,221 sought relief during the three months March to May. In addition to this number, during the same period the vaccinator and officer doing itinerating duties treated 3,484 cases, making a total of 8,705 treated during the epidemic.

There were smaller outbreaks of fever in the Akkarai pattu, one of the southern divisions of the Batticaloa District, in the early part of the year, where a vaccinator was employed on fever duty, and another during December in the Kottiyar pattu of Trincomalee.

In the hospitals and dispensaries of the Province, of the total number of patients treated, viz., 103,593, no less than 37,798 were cases of malaria.

It has been, I think, quite established that the mosquito is a factor, if not the chief cause, of the distribution of malaria, by conveying into the human system the germs of the disease; and this Province, which to a great extent is low-lying, abounds in paddy fields, marshes, tanks, and pools, which afford ample breeding ground for this pest, and it is not surprising that malaria should be so generally prevalent. I am afraid prophylactic measures to check the spread and prevalence of this disease will be a costly undertaking, and I see no prospect of any immediate measures being taken to bring about so desirable a result. I am trying, however, to impress upon the officers in the Province the advantage to be gained, at all events in checking to some extent the periodical outbreaks

among the more populated villages, by preventing the formation, and the filling up, of stagnant pools and hollows, the clearing of a sufficient space around the villages of all low jungle, and the timely treatment by quinine of those affected. We may reasonably hope that some good results may follow the adoption of these measures.

Parangi.—This disease comes next in the order of prevalence. It has been reported from every district in the Province, and affects, as far as I can see, all classes and nationalities, and does not spare even the fairly well-to-do sections of the various communities. Perhaps the type of disease is noted to be more severe in the interior or "vannam," which is chiefly populated by the Sinhalese. The disease is kept up and allowed to spread, as the people appear to be quite indifferent. The healthy mix freely with the sick, they bathe in the same pools, which also provide them with their supply of drinking water, their clothes are all washed in common, very often in the only tank, where also the cattle are watered; more attention to sanitation, an improved water supply, better food with more variety, and attention to segregation of the sick should be the measures adopted to check the spread of this disease.

Dysentery and Diarrhœa prevailed generally, but did not at any time assume an epidemic form. These complaints are probably due to the unwholesome food and impure water during the dry months, and to climatic changes during the wet.

Catarrhal Affections.—These prevail during the wet months, but during the year did not assume large proportions, nor were they of a severe type.

Leprosy.—This loathsome disease is very prevalent in the Kalmunai District, but cases are reported from Batticaloa and some of the neighbouring villages as well. The Medical Officer, Kalmunai, is of opinion that the disease is spreading, judging from the number of cases reported to him. The total number in the district is said to be 94, but it is possible that there may be even more, as the anæsthetic type may not have been readily recognized. Dr. Nicholas is of opinion that the "disease in some of the cases has been contracted from other than relatives, and that there is no trace of the disease in their own families or among the close relations."

The following table gives the number of cases of malarial fever and parangi treated at the various institutions in 1901:—

Total treated at Hospitals and Dispensaries.	Full Total treated.	Malaria.	Parangi.
Nindur	3,902	3,782	—
Trincomalee	5,291	754	15
Batticaloa	7,924	3,278	234
Kalmunai	13,635	3,680	426
Toppur	906	200	48
Muttur	2,878	750	159
Akkaraipattu	3,866	1,451	485
Eravur	18,706	6,819	642
Tamblegam	1,781	459	11
Pottuvil	6,785	2,046	182
Kiniyai	900	138	42
Nilaveli	461	108	2
Kadraveli	898	167	192
Vallaichchena	12,393	4,965	838
Paddiruppu	4,998	643	444
Kattankudi	12,694	6,774	202
Kokoticholai	1,454	515	472
Maha-oya	2,408	747	405
Padiyatalawa	296	145	16
Nadukadu	895	166	411
Tirukovil	522	211	22
Total ...	103,593	37,798	5,248

Relative Mortality in different Seasons.

I regret I am unable to say anything positive about the relative mortality in different seasons, as I have no reliable data to go upon, but judging from the prevalence of disease I should say the death-rate was higher during the rainy seasons.

Meteorological Conditions and their effect on Public Health.

There are two distinct seasons in the Province, the hot and dry from March to October, and the rainy season from October to March. The rainfall during the latter period is generally very heavy, and the country is flooded in many parts. During the months of January and February there is, besides, a heavy fall of dew. It is during this time that malarial fevers and chest affections chiefly prevail. The dry months are undoubtedly the healthiest.

Remarks on Particular Diseases.

Cholera.—Not a single case, I am glad to say, occurred in any part of the Province, although in the previous year it prevailed in an epidemic form in Batticaloa.

Smallpox.—One case was reported as such from Tamblegam, but proved on inspection to be a case of chickenpox.

Other Infectious Diseases.—Chickenpox and measles, as in previous years, were reported from different stations during the last quarter, but these diseases did not prevail to any great extent.

General Sanitary Condition of the Towns and Districts.

The general sanitary condition of the district is far from satisfactory. There are vast tracts of low-lying lands, and marshes and stagnant pools and swamps are formed in the neighbourhood of villages during the rains. The country being generally flat, the drainage is very defective every-

where. The smaller villages are in a fairly sanitary condition, but in no other Province are there so many thickly populated villages as in this, and in such villages as Kattankudia, Muttur, Toppur, Vallaichena, and Eravur, chiefly peopled by Moors, the laws of sanitation are set at defiance. Huts low and dark, imperfectly ventilated, crowded together, built up anyhow within high fences, which shut out all light and fresh air. Compounds used as open latrines, and dirt and rubbish allowed to accumulate in heaps. There is no system of drainage, in consequence of which rain water accumulates and stagnates in all hollows. Water supply in most places from tanks and shallow wells, and in many places the one tank serves all purposes: the parangi-stricken are allowed to bathe, clothes are washed, and cattle watered. I am glad to report that Sanitary Boards have been established at some of these crowded villages named, and measures have been adopted to improve their condition.

Batticaloa.—The sanitary condition is fairly satisfactory, but there is room for improvement. There is a Local Board of Health, but the revenue of the Board is small, and no big scheme for the improvement of the town can be taken in hand.

New roads are to be constructed, opening out crowded quarters, and allowing freer circulation of air, and latrines are to be provided. Of course a great deal more needs to be done, but no funds are available. The whole town needs a better drainage system, but owing to the flat nature of the land some difficulty is experienced.

Water Supply.—There is an ample supply drawn from wells, but these are apt to fail towards the end of the dry season. There are a few public wells provided, but only the people living in the vicinity draw their supplies from them.

Trincomalee. — Dr. Johnson reports as follows regarding the sanitary condition of Trincomalee:—

> *Drainage.*—The drainage of the place is in a lamentably defective condition. The side drains are dilapidated, and along the main thoroughfares they are so obliterated and choked that there is absolutely no flow, and storm water stagnates in pools, and impurities soak into the soil and become an ever present source of danger. The drains are actually used as receptacles for filth.
>
> *Overcrowding.*—Some parts of the town are very much overcrowded, and especially the fishers' quarters.
>
> The dwellings of the poor of the town are crowded generally, and all sanitary laws are neglected. The houses are low, and shut in by high fences erected only a couple of feet from the threshold, shutting out light and ventilation.
>
> *Latrine Accommodation.*—Six public latrines are provided for a population of over 11,000. These latrines, however, are hardly ever used; every private compound in the native town is, without exception, a latrine, and every open space, including the esplanade and sea shore, is polluted daily.
>
> *Water Supply.*—The town is liberally supplied with wells, these existing in every compound, and there are public wells provided as well. The latter are guarded from pollution, but the former are constantly exposed to this danger by the practice referred to above.

Kalmunai.—Dr. Nicholas reports that the sanitary condition of the district is on the whole satisfactory, though there is much room for improvement. Drainage is said to be defective owing to the ground being low and surrounded by paddy fields and swamps.

Vaccination.

The staff consists of an Inspector of Vaccination, one calf vaccinator, and eight native vaccinators. Of these, two Moormen and one female vaccinator are employed in carrying on operations amongst the Moors exclusively. Vaccination is also carried on weekly at thirteen dispensaries. The total number vaccinated in 1901 was 8,186, as against 6,338 in 1900. On the whole, vaccination in this Province is in a satisfactory condition, and the inhabitants are well protected from smallpox.

Other Observations.

Batticaloa Port.—This port is open only during the south-west monsoon, *i.e.*, for about seven months of the year.

There were in 1901 240 arrivals, viz., 30 steamers and 210 native vessels. The majority of these trade only along the coast, but a fair number came from the southern ports of India, such as Negapatam, Tondi, Madras, Porto Novo, &c. A few were quarantined as they were carrying foul bills of health. No infectious cases were detected during the year's inspection. No disease was imported. The total number of persons inspected during the year was: crew 3,192 and passengers 2,823.

Hospitals and Dispensaries.

There are three civil, one field, and one leper hospital, and 21 dispensaries, viz., 11 permanent and 10 visiting. Of the hospitals, one field hospital at Maha-oya in the Bintenna pattu was opened in May last, and judging from results has supplied a long-felt want. One dispensary was opened at Tirukovil, which is visited by the apothecary of Karunkodditivu. All these institutions are doing good work, and are much appreciated by the people. 1,436 patients were treated at the hospitals during the year and 102,157 at the dispensaries.

Leper Hospital, Kalmunai.—This hospital, established in 1896, has only accommodation for sixteen patients. It needs to be added to considerably if the provisions of the new Leper Ordinance are to be strictly enforced, as there are many cases of leprosy reported from various parts of the Province, chiefly in and about Kalmunai.

Jails.

There are two jails in the Province, one at Trincomalee and the other at Batticaloa; the former is only a lock-up. During the year a considerable addition to the number of prisoners at Batticaloa was made by the transfer of all the convalescents from Hambantota. At Batticaloa prison 32 cases were treated, with 2 deaths from malarial cachexia and diarrhœa respectively.

(6) NORTH-WESTERN AND SABARAGAMUWA PROVINCES.

These Provinces are under the supervision of Colonial Surgeon E. de Livera, M.B., C.M., whose report is subjoined :—

The population of the North-Western Province at the end of 1891 was estimated to be 35,796, and of the Province of Sabaragamuwa to be 323,547.

There were 14,581 births and 9,093 deaths in the North-Western Province, and 12,527 births and 9,977 deaths in the Province of Sabaragamuwa.

Prevalence of Sickness.

The diseases chiefly prevalent were malarial fevers, malarial cachexia, parangi, dysentery and diarrhœa, anchylostomiasis, venereal diseases, skin affections, and respiratory diseases.

Malarial fevers were prevalent to a much less extent than in the previous year, and there were no outbreaks of fever necessitating the employment of itinerating medical officers to visit the villages and treat the sick.

There were about 44,265 cases treated for malarial diseases in the North-Western Province, as against 78,237 in the previous year; and there were about 23,000 cases treated in the Province of Sabaragamuwa in 1901, as against 42,674 in the previous year. The type of fever prevalent has been chiefly the quotidian and tertian. There was a much larger number of cases of fever treated in the North-Western Province than in the Province of Sabaragamuwa.

The months during which fever was most prevalent were the wet months of the north-east monsoon, during the first and fourth quarters of the year. In Kurunegala, however, the largest number of cases appears to have been treated during the second quarter of the year, when the rainfall was not so heavy as in the first quarter.

Dysentery and Diarrhœa.—These diseases appear to have been more prevalent in 1901 than in the preceding year. The cases treated in the hospitals and dispensaries were larger in number, and outbreaks of dysentery occurred in several places.

Parangi.—The largest numbers were treated for this disease in the North-Western Province.

Anchylostomiasis.—The largest numbers treated for this disease were at the district hospitals of Karawanella, Balangoda, Rakwana, and at the dispensaries at Kitulgala and Kalawana in the Province of Sabaragamuwa, and at the hospitals of Kurunegala and Marawila in the North-Western Province. There does not seem to be any decrease of this disease.

Pneumonia.—This is a disease to which a large proportion of deaths in the hospitals is due. There were 214 cases treated in the hospitals, of which 79 proved fatal.

Leprosy.—There were only four cases of leprosy treated.

Measles and Chickenpox.—216 cases of chickenpox and 120 cases of measles were reported from different parts of the Provinces, but many more must have occurred without being reported.

Smallpox.—An outbreak of smallpox occurred at Ratnápura in the Province of Sabaragamuwa in April last. The origin of the outbreak could not be traced. Six persons were attacked, of whom four died. The spread of the disease was prevented by the rigorous measures taken to isolate the patients and contacts, and the systematic carrying on of vaccination and re-vaccination. Another outbreak of smallpox occurred in the District of Puttalam, in the North-Western Province, in August last, the first case occurring in a pilgrim to St. Anna's Church at Talawila from Colombo. Thirteen cases occurred in all, and of them two proved fatal. The disease was prevented from spreading in the town by the prompt measures taken by the medical officer, but a case occurred at Mudukadu, about 9 or 10 miles distant from Puttalam. Three cases of smallpox were reported from Nainamadam and Lunuwila, in the Marawila division of the Chilaw District.

Cholera.—There was no epidemic of cholera in either of the Provinces.

Meteorological Conditions.

The rainfall during 1901 was not so heavy as in the previous year in the Province of Sabaragamuwa, but in the North-Western Province it was a little higher in 1901. In the former the heaviest rainfall occurred in the second quarter (58·80 inches), while in the latter rainfall was heaviest in the first quarter (41·48 inches). In Karawanella, which may be taken to represent Sabaragamuwa, there was a total rainfall of 260·45 inches in 1901, as against a rainfall of 183 75 inches in the preceding year. In Kurunegala, which may be taken to represent the North-Western Province, the total rainfall was 94·96 inches in 1901, as against 88·33 inches in 1900.

The general health of both the Provinces was on the whole satisfactory. There were 5,984 patients treated in the hospitals of the North-Western Province during 1901, as against 5,952 in 1900; and 8,198 patients treated in the hospitals of the Province of Sabaragamuwa in 1901, as against 8,229 in the preceding year.

The following tables show the numbers treated, the number of deaths, the daily average sick, and the percentage of deaths to total treated in the hospitals of the two Provinces during the years 1900 and 1901 :—

North-Western Province.

Name of Hospital.	Numbers treated.		Average Daily Sick.		Number of Deaths.		Percentage of Deaths to Total treated.	
	1900.	1901.	1900.	1901.	1900.	1901.	1900.	1901.

Godakawela	621	637	24·65	27·69	20	27	3·38	4·01
Total ...	8,229	8,198	447·18	450·23	759	1,073	9·10	10·75

In the twenty-three dispensaries and branch dispensaries of the North-Western Province there were 104,877 persons treated in 1901, as against 150,235 in the previous year; and in the twenty-one dispensaries and branch dispensaries of the Province of Sabaragamuwa there were 67,933 persons treated in 1901, as against 101,742 in the previous year.

General Sanitary Condition of the Provinces.

The general sanitary condition of both the North-Western Province and the Province of Sabaragamuwa remains the same as in the previous year.

Kurunegala.—Nothing has yet been done to improve the drainage and water supply. There are many pools and puddles which require filling up.

Puttalam.—A good and sufficient water supply is still wanted here. Draining the town properly does not seem to be practicable owing to the land being low and flat, but attempts should be made to fill up all the swamps and hollows lying near houses and round the hospital.

Chilaw.—Much has been done to improve the sanitary condition of this little town, but a good water supply is much needed.

Ratnapura.—The sanitary condition is fairly satisfactory, as there is a good water supply and drainage is sufficient.

Rakwana.—The drainage of the town is said to be better attended to.

Kegalla.—The sanitary condition is reported to be fairly satisfactory within the Local Board limits.

Karawanella.—The sanitary condition is practically the same as in last year.

Vaccination.

There were 11,828 subjects vaccinated and 977 re-vaccinated in the North-Western Province, with the following results: successful 9,237, unsuccessful 945, unknown 2,625; and there were 15,143 subjects vaccinated and 1,748 re-vaccinated in the Province of Sabaragamuwa, with the following results: successful 13,026, unsuccessful 1,407, absent 2,458.

The percentage of successful vaccinations were 92·27 for primary vaccinations and 68·46 for re-vaccinations in the North-Western Province, and 80·40 for primary and 48·68 for re-vaccinations in the Province of Sabaragamuwa.

Jails.

There are three jails in the North-Western Province, at Kurunegala, Puttalam, and Chilaw, and two in the Province of Sabaragamuwa, at Ratnapura and Kegalla. Only short-sentenced prisoners and those on remand, with road defaulters, have been confined in these jails.

Other Observations.

A new dispensary was opened at Dodangaslanda in March, the building being provided by the Government Agent from funds collected from contributions from villagers, according to the scheme devised by the late Government Agent Mr. Fisher. Another dispensary was opened at Wariyapola in December. The permanent building not being ready, a temporary building was provided. Branch dispensaries at Rambodagalla, Hettipola, and Katupota will soon be ready for occupation.

A new dispensary building has been substituted for the old temporary one rented at Embilipitiya. A new permanent ward has been built at Karawanella, and a permanent block of wards is now in course of construction at Kegalla. Two new buildings have been added to the Balangoda hospital, one to be used as quarters for the nurses and the other as dispenser's quarters.

The bathrooms and latrines at Dandugamuwa have been provided with cement floors, and the ground immediately surrounding the well was also paved and cemented. At the Nikaweratiya hospital additional drains have been built, and the system of drainage is now complete. A new pump has been fixed to one of the wells at the Kurunegala hospital compound. The old storeroom at the Godakawela hospital has been converted to a ward.

I have visited all the hospitals and dispensaries in both the North-Western and Sabaragamuwa Provinces twice during the year, with the exception of the branch dispensaries at Ma Eliya and Nikawewa, which I visited only once, but the records of which, being kept at Batalagoda, I inspected twice.

(7) PROVINCE OF UVA.

This Province is under the supervision of Colonial Surgeon F. Oorloff, M.B., C.M., whose report is subjoined :—

Hospitals	Civil ...	...	1
	District	...	2
	Field or Parangi	...	3
Dispensaries	Civil ...	...	9
	District	...	9
	Estate...	...	12

Estimated population	1901 ...	...	186,528
	1900 ...	...	188,964
Births	1901 ...	...	7,433
	1900 ...	...	7,322
Deaths	1901 ...	...	7,574
	1900 ...	...	6,718
Birth-rate per 1,000	1901 ...	...	39·8
	1900 ...	...	38·7
Death-rate per 1,000	1901 ...	...	40·6
	1900 ...	...	35·5

Prevalence of Sickness in the different Seasons of the Year.

The diseases most prevalent were malarial fever, dysentery, diarrhœa, parangi, rheumatism, and respiratory affections.

Malarial Fever.—The largest number of cases, viz., 2,071, were treated at Badulla in the hospital and at the outdoor dispensary, Medagama comes next with 1,644 cases, Koslanda comes third with 1,477 cases, Passara comes fourth with 1,451 cases, Muppana comes fifth with 1,331 cases, and Bibile comes sixth with 1,230 cases. Pingarawa had the smallest number, viz., 298. In no place did it assume an epidemic character, and the cases that occurred readily yielded to treatment. It was most prevalent during the north-east monsoon. During my half-yearly circuits in the Province I have invariably explained to the headmen and villagers the great necessity for preventing the formation of stagnant pools of water, especially in the vicinity of their dwellings.

Diarrhœa and Dysentery.—These diseases prevailed to a somewhat great extent during the last quarter of the year, and were chiefly attributable to unwholesome food and water. The villages in which they occurred were promptly visited by the apothecaries of the respective districts. The distribution of medicines and the adoption of sanitary measures resulted in rapid recoveries and very few deaths.

Parangi. — This disease exists to a great extent in Medagama, Alutnuwara, Badullewella, Buttala, Muppana, Tanamalwila, and Wedikumbura. Its prevalence is no doubt due to the want of wholesome food and water and segregation.

Rheumatism and Respiratory Diseases.—These diseases prevailed mostly during the first and last quarters of the year.

Relative Mortality in the different Seasons.

The following table gives the number of deaths registered during the year :—

	No. of Deaths registered.		No. of Deaths registered.
January ...	... 635	August ...	... 525
February ...	... 507	September ...	... 631
March ...	... 581	October ...	... 722
April ...	... 744	November ...	... 885
May ...	... 480	December ...	... 838
June ...	... 468		
July ...	... 558	Total ...	7,574

The mortality, as will be seen from the above figures, was highest during the last quarter. The following diseases were the chief causes of the deaths registered :—Diarrhœa, dysentery, infantile convulsions, pneumonia, malarial fevers, tubercle of lungs, and bronchitis.

Meteorological Conditions and their effect on the Public Health.

The rainfall was heaviest during the first and last quarters of the year, *i.e.*, during the prevalence of the north-east monsoon. The dry season corresponds with the south-west monsoon, which lasts from April to September. During the wet months the diseases which chiefly prevailed were malarial fevers and respiratory affections, and during the dry season parangi, sore eyes, skin affections, and chickenpox.

Particular Diseases that have recurred during the Year.

Cholera.—This disease prevailed to a certain extent in Alutnuwara, Pangaragamama, Migahawela, and Welimada. There were 46 cases, with 27 deaths.

Smallpox.—There were only 7 sporadic cases of this disease, viz., 3 in Bandarawela, 1 in Haldummulla, and 6 in Welimada, with 2 deaths in the last-mentioned place.

Chickenpox.—123 cases were reported from seven stations.

Measles.—A hundred cases were reported from thirteen villages.

General Sanitary Condition of the Province.

Badulla.—The water supply is good and sufficient, the water being conveyed to the town by pipes. The drainage continues to be defective. The town was not overcrowded during the year.

Bandarawela.—The scheme for improving the water supply, referred to in my last report, is, I understand, still under consideration. The drainage is defective. There was no overcrowding of the bazaar.

Haputale.—The water supply is good and sufficient. The drainage is very bad. There was no overcrowding.

Haldummulla.—The water supply is pretty good. The drainage is defective. There was no overcrowding. Public latrine accommodation is wanting.

Koslanda.—The water supply is pretty good. The drainage is bad. There was no overcrowding.

Passara.—The water supply is pretty good. The drainage is bad. There was no overcrowding.

Lunuyala.—The water supply is liable to pollution. This could be remedied by the extension of the water-service from the resthouse to the bazaar street. The drainage is very bad. There was no overcrowding.

Welimada.—The chief source of the water for drinking purposes is a stream which flows into the resthouse premises. The drainage is bad. There was no overcrowding.

Vaccination.

Six vaccinators (four district and two estate) were employed during the year. In addition to this, the medical officers and apothecaries carried on vaccination at the outdoor dispensaries. The work of the vaccinators was regularly inspected by the Inspector of Vaccination, and the vaccination at the Outdoor Dispensary, Badulla, was regularly inspected by the Colonial Surgeon.

The following table shows the number of persons vaccinated and re-vaccinated, with results, during 1900 and 1901 :—

	1900.	1901.
Primary Vaccination :—		
Number vaccinated	6,835	7,011
Number successful	6,036	6,218
Number unsuccessful	414	325
Number unknown	385	468
Percentage of successful to total inspected ...	93·68	95·04
Re-vaccination :—		
Number vaccinated	1,400	1,014
Number successful...	891	471
Number unsuccessful	266	291
Number unknown	243	252
Percentage of successful to total inspected ...	77·00	61·81

Prosecutions under the Vaccination Ordinance.—There were 128 prosecutions.

---

(8) REPORT of the Acting Surgeon in charge of the General Hospital, Colombo, Dr. H. M. Fernando, M.D., B.Sc., Lond., Fellow of University College, London.

(A) GENERAL HOSPITAL.

(1) *Administration.*

DURING the year 1901, the number of patients treated in the hospital amounted to 15,614. For purposes of comparison I append the following table :—

	Total Treated.		Total Treated.
1895	7,806	1899	9,399
1896	7,876	1900	14,221
1897	9,063	1901	15,614
1898	9,102		

Although the increase in 1900 was phenomenal and unprecedented, there has been a steady increase even last year. The number of patients receiving treatment in the hospital has doubled within the last five years. The daily average amounted last year to 506·31, so that lack of accommodation was actually felt all through the year.

The erection of the temporary wards, which were urgently required at the end of 1900, was not undertaken till the middle of the year. These wards are only approaching completion now. I feel confident that when they are completed they will relieve the overcrowding which occurs at present. The wards are cool, airy, and well ventilated, and will accommodate ninety patients.

To further relieve the overcrowding, an arrangement was made by Government with "The Victoria Home for Incurables" to accommodate about 25 incurable cases from the General Hospital in the Home, Government undertaking to pay for their maintenance. This arrangement gave this hospital great relief in setting free a number of beds for the relief of acute diseases, which had been utilized for incurable cases. Even at present several beds are permanently occupied by blind and others who are not received by the Home for Incurables.

The Professional Staff.—The changes consequent on the translation of Dr. T. F. Garvin as Chief Medical Officer, Boer Camp, Diyatalawa, continued throughout the year. Dr. Joseph de Silva, M.B., C.M. (Aberdeen), was appointed Third Physician in March.

Nursing.—The work of the Rev. Mother Superior and her staff increases with the increase of patients. I regret to state that two of the Sisters utterly broke down in health during the year. With the opening of the new wards I hope that a further increase in the number of Sisters will be permitted. The accommodation provided for the Sisters is insufficient, and an extension to their quarters is urgently called for.

Improvements.—The administration block for the General Hospital, which had been asked for for several years, was sanctioned last year, but its erection has not yet been started. The temporary wards already referred to will be completed and fit for occupation by April next.

Expenditure.—The vote for the diets was Rs. 40,000, but under this head the expenditure amounted to Rs. 53,350·40, the excess of expenditure over the vote amounting to Rs. 13,350·40. This was entirely due to the large increase in the number of patients. The total cost per head per day for food and stimulants was 30·57 cents, as against 30·63 cents in 1900 and 32·57 in 1899.

(2) *Professional.*

The total number of cases treated during the year reached the enormous total of 15,614 for the 370 beds available in the whole hospital.

Of the cases treated, 1,219 died, the mortality reaching 7·80 per cent., being exactly the same as the rate of mortality in the preceding year. Amongst Malabars the death-rate amounted to 12·77, and amongst cases sent in by the police in a more or less moribund condition the rate reached 36·69 per cent.

No special epidemic of a far-reaching character was prevalent, but dysentery, phthisis, diarrhœa, pneumonia, and enteric fever are still on the increase. Of enteric fever, 198 cases were admitted during the year for treatment, and these were drawn from all parts of the town.

From the above list of diseases which are on the increase, it is clear that the public health of Colombo is far from satisfactory. But no great improvement to the public health can be expected until the improvement of conservancy and of drainage, a more liberal policy in the distribution of water to the poorer classes, and a check to overcrowding in the slums, are undertaken by the Municipality. With the adoption of the Mansergh scheme of drainage and sewerage, which has already been sanctioned, and the re-duplication of the water main, a great improvement to the public health of the city may be confidently expected.

(B) PAYING WARDS.

The work of these wards keep steadily increasing. In the year under review the number treated reached the large total of 639 patients, as against 616 in 1900 and 412 in 1899. These cases were distributed as follows :—

	Medical.	Surgical.
Seamen's Ward	256	170
Planters' and Anthonisz Wards	83	104
Passengers' Wards	19	4
Cargill's Ward	3	—
	361	278
	639	

Of the numbers treated, the deaths were 48, equal to a mortality of 7·51 per cent. Of the patients treated, 76 were cases of enteric fever, the largest record of enteric cases for a year. Amongst these cases ten deaths occurred, a satisfactory mortality, considering that several of the deaths, especially in the Seamen's Ward, occurred amongst patients who had been exposed to the privations and hardships incidental to the military operations in China.

Of the prisoners of war sent to this Colony, 58 received treatment in the paying wards during the year, 32 being medical cases and 26 surgical. Four of these prisoners died.

Revenue and Expenditure.—The total income from these wards amounted to Rs. 33,608·17. The expenditure under the head of Diets, Lighting, Attendants, and Equipment amounted to Rs. 29,298·17, leaving a balance of Rs. 4,310. Deducting Rs. 2,000, the wages of the nursing staff, there remains a balance of Rs. 2,310 only, which is far from adequate to meet the expenditure incurred by Government for the payment of the medical staff, cost of medicines and surgical appliances, and the cost of upkeep and repairs to buildings. It is clear that the Government is maintaining these wards for the benefit of the public and planters at a considerable loss.

Report of Mr. H. G. Thomasz, F.R.C.S. (Edin.), Second Surgeon, Civil Hospital, Colombo.

I HAVE been in sole charge of the surgical work of the Civil Hospital, Colombo, during the year. This work has been most congenial to me, and I have been able to show good work and creditable results. I occupied a similar position when Dr. Rockwood retired, from 1st April, 1898, to May, 1899. I have been ably assisted by the staff, which consisted of a qualified House Surgeon and a senior medical student.

It is absolutely necessary, for the surgical supervision of 200 or more pauper patients, that another qualified House Surgeon should be appointed. The surgical demands in this institution are daily increasing, both in the paying and pauper wards, and the casualty work is very heavy and too great for one House Surgeon to cope with. He has occasionally to attend court as well as to give evidence in assault cases, when the surgical and casualty patients are immediately under unqualified charge. It will be seen from my diary that I devote a good deal of my time to my hospital duties, and that to keep abreast with the work I devote three special days for operation work, reserving the other days for close ward and clinical work. On operating days the work falls specially heavy on the staff and myself without another responsible assistant, who can be relied upon for the routine work in the pauper and paying wards, and specially the casualty department. The Principal Civil Medical Officer has fully seen the necessity for such an appointment, and has, I believe, brought the weight of his authority to bear in securing a promise of another qualified officer for the surgical staff.

Accommodation inadequate in ulcer and syphilis wards. This is being remedied by the erection of "temporary wards." No steps have been taken as yet for the erection of isolated "strong rooms" for violent and noisy cases, or for infectious and contagious cases, like erysipelas, tetanus, &c.

Equipment.—Every effort has been made to remedy all deficiencies in this direction, and complaints have been very few, as there has been an intelligent appreciation of the want of this institution and its daily increasing demands on an Equipment Vote. I have always been able to secure all I wanted for the wards to ensure surgical success, and which would tend to make the paupers more comfortable and happy under depressing surroundings.

Nursing.—Fair; more supervision required. Night nursing indifferent.

Attendants.—More supervision required. They are ill-paid in pauper wards.

Medicines, Materials, and Surgical Dressing have been well supplied, and every request for new drugs or instruments has been promptly attended to, or effort has been made to secure it by special vote.

Dressers.—Greater attention is paid to ward work, but the number of students attached to each ward is small, and a good deal of rough dressing has to be done by the ward attendant; *e.g.*, the ulcer ward contains at times 50 to 60 patients, and the syphilis ward between 35 to 50; only four and five students are attached to these wards for work. They are unable to cope with this, and the attendants have to help them.

Paying Wards.—The work in this section of the hospital is increasing daily, owing to the popularity of the institution and the development of the Port of Colombo.

I annex a statement showing the increase of work in the surgical section :—

Year.	Number of Cases treated.	Remarks.
1899	164 ...	All important cases requiring constant attention.
1900	225 ...	
1901	278 ...	

Remarks on Professional Work.—The total number of operations for the year was 712. There were 15 deaths, giving a mortality of 2·2 per cent. Of the 28 amputations, 2 were of the thigh, 2 leg, 1 tarsometatarsal, 1 upper arm, 3 forearm, 6 metacarpo phalangeal, and 13 digits.

Fifty-four operations for inguinal hernia, 22 in cases of strangulation (herniotomy), and 32 for radical cure of reducible scrotal hernia. Bassini's or Bank's methods were always adopted by me, but Dr. Chalmers in three cases performed Ball's operation. One death occurred after herniotomy, due to gangrene of the bowels, as shown by the post-mortem. Another case of strangulated hernia was brought in rather late. The patient was chloroformed, but the bowels returned to the abdominal cavity before taxis was applied. The patient died six hours later, death being due to gangrene of the bowels.

Nine cases of hepatic abscesses, with 2 deaths, one three days after admission, due to the abscess having burst into the alimentary canal, as shown by the escape of a round worm from the abscess cavity when opened, and the other due to multiple abscess.

Five cases of ovariotomy were successfully performed.

Thirty-five cases of hydrocele, in 10 of which extroversion of the sac, and the rest by injections into the sac of a drachm or two of perchloride of mercury solution 1 in 500.

Seventeen cases of hæmorrhoids were treated by ligature and excision, with good results.

Three cases of stone in the bladder were operated upon, 2 by lithotrity and 1 by supra-pubic lithotomy; all recovered.

Twenty malignant new growths and 33 non-malignant new growths were removed by operation.

Of the 4 cases of laparotomy, 2 recovered, 1, a case of volvulus, involving the large intestine with a very long mesocolon. In this case the bowel was drained with rubber tubing fixed into the large intestine by a purse string suture, and the bowel itself was fixed to the lower end of the wound. The other case was one of suppurative peritonitis, in which the abdominal cavity was washed and drained. Of the remaining 2, 1 a case of tubercular peritonitis, the patient succumbed a few hours after operation; and the other was a case of intussusception of long duration, where operation was undertaken seven days after the twisting of the gut, and the patient died four days after admission into hospital.

Two cases of perineorrhaphy, 1 for imperforate hymen, 2 amputations of the cervex, and 16 cases of curetting of uterus, also 2 vesico-vaginal fistulæ were treated, all with good results.

Of the 3 cases of tracheotomy, 2 were for diphtheria. Both died from cardiac failure, due to diphtheretic toxæmia.

Two cases of ligature of arteries. One was a successful operation done for popliteal aneurysm.

Of the 31 cases where trephining was done, 4 ended in death. They were serious cases, extensive fracture implicating the base of the skull and laceration of brain matter in some, as shown by post-mortem examination.

Nine cases of empyæma treated by thoracotomy, with one death, due to long duration before admission of the patient into hospital.

Two successful cases of tenotomy were performed.

Seventeen castrations for hæmatocele and suppurative phebitis of the cord.

Nineteen amputations of the penis were done for malignant disease.

Elephantiasis scroti in an advanced state were successfully treated in 3 cases.

One case of harelip, with good results.

Eleven excisions of eyeball, mostly for panopthalmitis.

Excisions of carbuncles were performed in 8 cases.

Ten operations for fistula in ano were performed. There were 17 cases of catheterization under chloroform.

One case of transverse fracture of patella, with sub-cutaneous ligature of fragments.

A case of hydatid of liver.

One case of varicocele was treated successfully by Benett's operation.

A case of sub-diaphragmatic abscess treated was lost, due to suppurative peritonitis.

Extraction of bullets and other foreign bodies under chloroform numbered six.

A death due to pyæmia occurred in the case of a young subject operated on for a long-standing iliac abscess.

348 other operations were done under chloroform, such as excision of glands of neck and groin, circumcision, opening abscesses and sinusses, excision of bone, &c.

Besides myself, operations were performed by Drs. Chalmers and Sinnatamby:

Report of Dr. M. Sinnatamby, M.D. Brux., F.R.C.S., Second Physician.

DURING the year I worked as Second Physician, except but for a brief period, when Dr. Thomasz's illness necessitated my attending to his surgical duties.

I had, as in previous years, the medical charge of the male medical ward No. 1, the two upper male diarrhœa wards, and the female medical ward, giving in all an accommodation for 74 patients. The total number of cases admitted into my wards was 3,330, as against 3,185 in 1900, and their distribution in the wards was as follows :—

The Male Medical Ward No. 1	553
The two Upper Male Diarrhœa Wards	1,580
Female Medical Ward	1,197
Total	3,330

Overcrowding continued unrelieved during the year, and the largest number of admissions into my wards was during the month of January, when the accommodation was taxed to the utmost limit. Completion of the temporary wards promises to relieve this chronic congested state of the wards to a certain extent, but the question of overcrowding cannot be considered as settled until another hospital is constructed in the northern part of the city to meet the wants of its growing population.

Anchylostomiasis and enteric fever are on the increase. I have all along held that water was not the main source of infection in cases of anchylostomiasis as is generally supposed, and the preventive measures should be directed towards ensuring personal cleanliness and a better system of conservancy than at present obtains. The life-history of the parasite outside its human host precludes a water-borne theory.

Enteric fever is another disease which requires special attention of the sanitary authorities. The source of infection is perhaps through the medium of food and flies. Notification, disinfection of the stools properly conducted, and the introduction of Mansergh's system of drainage may conduce to the improvement of the public health of Colombo. The present pernicious system of disposal of the sewerage, I am convinced, tends not a little to the prevalence of enteric fever.

Nursing, especially night nursing, leaves much to be desired. A specially trained nurse for attendance on gynecological cases is a desideratum.

Attendants.—The standard of efficiency of the staff of the attendants requires to be raised. This can effectually be done by raising the wages, so that decent men may be induced to apply.

The working of laundry in connection with this hospital, besides effecting a saving in the long run, will remedy the present unsatisfactory state of the washing (*vide* my report for 1900).

Before concluding, I must again appeal for a qualified House Physician.

Report of Mr. Joseph de Silva, M.B., D.P.H., Acting Third Physician.

I ASSUMED duties as Acting Third Physician of the General Hospital, Colombo, on the 4th April, 1901, the wards in my charge being the lower male diarrhœa wards and the female diarrhœa ward. The number of patients admitted into them for the whole year (1901) is into lower male diarrhœa wards 1,730, into female diarrhœa ward 969. Of the former 381 died, and of the latter there were 176 deaths, the rest being discharged cured or relieved.

The mortality is indeed high. It is not, however, of a greater percentage than of previous years, yet one would much desire to see it less, though perhaps it is unavoidable. This is to be attributed mainly to the class of patients admitted into these wards, who are generally the poorest of the poor. Their very low social condition and their complete want of intelligence and anything like cleanliness are causes which all contribute to the aggravation of all maladies that may happen to attack them. Not unfrequently patients come in or are often brought into the wards when no medical relief could be of any avail, and many are the cases that end in death a few hours, and in some, though rare, cases even a few minutes, after admission. Further, diarrhœa, especially chronic, is the disease that carries off the largest number, and it is the sad despair of the officer attached to these wards.

Accommodation.—The wards are very badly overcrowded. For various reasons cases that are incurable and are unfit for the wards of a General Hospital have to be kept in these wards for lengthy periods. The remedy for the ever-increasing congestion of wards that are already overcrowded may be looked forward to in the early opening of the new wards.

Nursing is fair, but the Sister in charge of the lower male diarrhœa ward has to work hard to fulfil her duties in a satisfactory manner. She is further handicapped by the poor help she receives in the way of attendance, which is decidedly bad. The wages offered to the attendants of these wards are so inadequate that none but an indifferent class of men seek employment in such work. The services required of the attendants of these wards are not at all pleasant, and an increase in the salaries offered may tend to an improvement.

In concluding, I must lay great stress on the fact that the want of an assistant is very often badly felt. The Third Physician has to administer chloroform in the operating theatre three days in the week, and on such days the necessary time cannot possibly be devoted to ward work. There are on an average between 80 and 100 patients in these wards, and some time has to be devoted to each of them individually, no matter what the disease may be. Relief of a part of this task is an essential necessity, and could be obtained in the appointment of an assistant—a senior medical student, if not a fully qualified person. Such an appointment would, while relieving the officer in charge of considerable anxiety, be also a distinct advantage to the patients.

Report of Dr. W. H. de Silva, M.B., C.M., Ophthalmic Surgeon.

Staff.—The staff of the infirmary remains the same. During the year I was away on seven months' leave in Europe, during which period the ophthalmic work was attended to by the Principal Civil Medical Officer and Dr. H. Joseph, L.M.S.

Number of Outdoor Patients.—4,336 cases have been treated, as against 3,676 in 1900.

Diseases treated during the year include—

Abscess of lid	... 5	Hypermetropia	... 30
Do. lachrymal	... 8	Do. compound	... 1
Do. of frontal sinus	... 1	Hernia of iris	... 2
Albinism	... 1	Inflammation of caruncle	... 1
Astigmatism	... 3	Injury to cornea	... 4
Do. myopic	... 8	Injury to sclerotic	... 1
Do. compound	... 1	Iritis	... 23
Do. hypermetropic	... 2	Do. syphilitic	... 3
Amblyopia	... 1	Do. rheumatic	... 7
Blepharitis	... 33	Kerato malacia	... 6
Do. ulcerosa	... 9	Keratitis	... 10
Do. squamosa	... 2	Do. interstitial	... 6
Burn of eye	... 2	Do. ulcerative	... 2
Cataract	... 123	Do. punctate	... 3
Do. soft	... 2	Do. phlyctenular	... 9
Do. congenital	... 3	Leucoma	... 40
Do. traumatic	... 4	Leucoma, adherent	... 9
Conical cornea	... 1	Lachrymal obstruction	... 21
Contusion	... 9	Myopia	... 21
Congenital coloboma of both eyes	1	Nyctalopia	... 1
Conjunctivitis	... 313	Neuritis, optic	... 1
Do. catarrhal	... 3	Neuralgia and headache	... 12
Do. granular	... 5	Ophthalmia, neonatorum	... 3
Do. phlyctenular	... 49	Do. acute catarrhal	... 13
Do. follicular	... 8	Do. gonorrheal	... 1
Choroiditis	... 2	Do. sympathetic	... 7
Do. central	... 2	Do. strumous	... 1
Do. commencing	... 1	Occlusion of pupil	... 3
Corneal ulcer	... 52	Opacities of cornea	... 2
Ciliary staphyloma	... 2	Do. vitreous	... 1
Do. spasm	... 2	Optic atrophy	... 5
Cyst, Meibomian	... 19	Presbyopia	... 42
Cyst of lid	... 2	Pinguicula	... 5
Distichiasis	... 2	Panophthalmitis	... 10
Dislocation of lens	... 1	Pterygium	... 19
Entropion	... 2	Polypus of conjunctiva	... 1
Eczema of lids	... 5	Pannus	... 7
Facial paralysis	... 2	Retino choroiditis	... 1
Foreign body in cornea	... 35	Retinitis pigmentosa, central	... 1
Foreign body in eye	... 8	Scleritis, rheumatic	... 1
Glaucoma	... 4	Sclerotitis	... 1
Heterochromia	... 1	Synechia, post and ant.	... 6
Hæmorrhage, retinal	... 1	Staphyloma	... 15
Hæmorrhage, sub-conjunctival	... 4	Trachoma	... 21
Hypertrophy of lachrymal gland	... 1	Wounds of eye	... 16
Hordeolum	... 2	Zanthema conjunctiva	... 1

Collections for the year in 1901 Rs. 126·83, in 1900 Rs. 98·40. These were of a purely voluntary nature.

Number treated in the General Hospital 327.

Operations.—152 operations were performed during the year. These include the following :—

Cataract	... 43	Enucleation of eyeball	... 2
Corneal ulcer (cauterization)	... 12	Removal of foreign bodies	... 9
Removal of cysts (Meibomian)	... 12	Removal of lachrymal gland	... 1
Iridectomy for glaucoma	... 5	Mule's operation	... 1
Iridectomy for leucoma	... 22	Needling	... 10
Iridectomy for occlusion of pupil	... 2	Pterygium	... 10
Incision of symblepharon	... 1	Trachoma	... 1
Lachrymal obstruction	... 15	Tattooing	... 2
Lachrymal abscess	... 3		

Improvements suggested. — Owing to the possibility of the Eye Hospital being realized, I would make no suggestions for improvements this year.

(9) REPORT of the Medical Superintendent, Lunatic Asylum, Colombo, Mr. J. B. Spence, M.A., M.B.

I HAVE the honour to submit the annual report of this asylum for the year 1901.

At the beginning of the year the number of patients remaining on the asylum register was 494 (310 males and 184 females). During 1901 78 males and 46 females, total 124, were admitted. The total number treated was thus 618 (males 388 and females 230).

Eighty-three patients (50 males and 33 females) were discharged, and 72 patients (36 males and 36 females) died during the year.

The number remaining on the register at the end of the year was therefore 463 (males 302 and females 161), *i.e.*, a decrease of 31 patients (8 males and 23 females). This rather more than counterbalances the increase of the previous year, but the relief afforded by it is more apparent than real, since it affects chiefly the female division, in which additional space is much less urgently required than in the male division, and also for other reasons to be alluded to later.

The average daily number resident (in the asylum alone) in 1901 was in the case of males 305·39 (an increase of about 10 from the previous year), in the case of females 176·06 (a decrease of about 10); taking both together the number was 481·45, as against 481·03 in 1900. The demand on the available accommodation has thus been greater than before, at least in the male division, which is least able to afford it, in spite of the decrease in the numbers remaining at the end of the year.

For the house of observation the figures are as follows:—At the end of 1900 three patients, all males, remained on the register. During 1901 160 cases (114 males and 46 females) were admitted. The total number of cases under treatment was therefore 163 (117 males and 46 females). Of these, 106 cases (77 males and 29 females) were discharged, and 47 cases (33 males and 14 females) were transferred to the asylum. Two male patients died in the course of the year. The number remaining in the house of observation at the end of the year was 8 (5 males and 3 females). The daily average number resident in it was in the case of males 3·84, in that of females 1·59, and in both together 5·43.

Although technically distinct, the asylum and house of observation have to be taken together in framing an estimate of the adequacy of the accommodation provided, and that must be judged in relation to the maximum rather than to the average number.

The greatest number of males resident in the whole institution on any one day was 318, as compared with 313 in the previous year; of females 191, as compared with 197 in 1900. The greatest total number was 502, *i.e.*, two less than the maximum of 1900. The minimum numbers for the year were males 299, females 163, total 468.

The daily average numbers for the whole institution were males 309·23, females 177·66, total 486·89. This shows an increase of 11·20 in the daily average number of males requiring accommodation, a decrease of 9·82 in that of females, and an increase of 1·38 in the total number as compared with last year.

Admissions (*Asylum*).—The number admitted (124), though not quite so high as in the two preceding years, is considerably above the average. Nine of the cases (6 men and 3 women) had been under treatment here before, *i.e.*, about 7 per cent. of the total number. Five of the admissions were prisoners of war from South Africa. Two cases of general paralysis of the insane were admitted, 1 to the asylum and 1 to the house of observation; and 2 others, admitted late in 1900, in whom the diagnosis was not at first quite clear, were transferred to this category. As the years progress I become more and more convinced that general paralysis not only exists among Asiatics, contrary to the opinion of some authorities, but that it is not very rare; its non-recognition in some cases probably depends on its being less obvious and definite in its clinical features here than in Europe. This does not apply to all the cases, however; a certain proportion are typical and unmistakable.

The form of mental affection in those admitted was mania in 59 cases (39 males and 20 females), melancholia in 43 cases (20 males and 23 females), epileptic insanity in 9 cases (7 males and 2 females). There was 1 case each of stupor and dementia, while in no fewer than 10 cases (9 males and 1 female) I was unable to detect insanity. In some of these a transient attack may have occurred, and recovery have followed very speedily, but in others I think a mistake had been made.

Discharges.—The number discharged (83) was, with one exception, the highest since the opening of the asylum; in females it was the highest. Calculated on the admission rate, the percentage of recoveries was 41·93 (males 34·61, females 54·34); the average for the previous thirteen years was 47·67 (males 48·39, females 47·40). The number discharged as "recovered" was 52 (27 males and 25 females), as "relieved" 14 (9 males and 5 females), and as "not improved" 17 (14 males and 3 females). The last number is inordinately magnified by the cases classed as "not insane," of whom there were 14 (12 men and 2 women).

Deaths.—The rate of mortality, calculated on the average number of patients on the roll, was 14·95 per cent. (males 11·78 per cent., females 20·44 per cent). Calculated on the total number treated, the rate was 11·65 per cent. (males 9·25 per cent., females 15·72 per cent.). This is an unusually high ratio, the averages for the thirteen preceding years being 8·64 per cent. (males 9·36 per cent., females 7·37 per cent.) and 6·99 per cent. (males 7·45 per cent., females 6·11 per cent.), respectively. The average for males and females together has been exceeded on one occasion previously (1893), but the average for females alone is nearly double that of any previous year. This is chiefly accounted for by the very unusual proportion of cases of cerebral degeneration or some other incurable disease. In 14 cases (9 males and 5 females) death resulted from disease of the brain alone, and in 16 more (10 males and 6 females) such disease was the chief factor, though combined with other maladies, while it was contributory in 12 others (5 males and 7 females). Eight deaths resulted from phthisis alone, and 5 others from that in combination with other disease. Heart disease was the chief cause of death in 3 cases, and a considerable factor in at least 4 more. Liver disease in 4 chiefly, and in several others partly. Dysentery alone in 3 cases, and along with old age or brain disease in 5 more. Other forms of intestinal affection constituted the chief cause in 5 cases, while old age was the sole cause in 4 cases (1 male and 3 females), and an important element in several others. There were two deaths from pneumonia, and one from ulceration of the œsophagus, caused by the impaction of a jagged piece of fish bone, so situated that, though repeated examinations were made, it could not be felt. I regret to have also to record the occurrence of the first case of suicide since I took charge here. The patient, a very tall and powerful European, was admitted to the house of observation suffering from suicidal melancholia of the most acute kind, his thoughts being concentrated on the idea of suicide, and on methods whereby it might be accomplished. At times his excitement

became so great that five attendants had much difficulty in restraining him, and in view of this and of the other circumstances of the case it was deemed preferable to seclude him in a padded room. during the night, an attendant being placed on duty at the door of the room with instructions to summon assistance should he hear anything to suggest the necessity for such action, while arrangements were made for the periodic visitation of the patient by three attendants. During the greater part of the night these measures were successful, but towards morning the patient, having perceived a weak point in the construction of the room, which had previously escaped observation, and having accomplished an athletic feat, which would have been very difficult, if not impossible, for any one of less stature and inferior muscular power, succeeded in hanging himself. As he had been walking about and beating the pads and making much noise before, the noise which must have resulted from his efforts to attach the noose were unperceived, or at least were not distinguished from previous noises; while the quietude that followed, and that was observed, was at first supposed to be due to a quiescent interval, of which there had been several. When its prolongation led to the door being opened, the patient was perceived to be dead, and medical aid, which was summoned at once, was quite useless.

The high rate of mortality has been the subject of very careful consideration, and though it was largely due to causes that were obviously unavoidable, the comparatively frequent occurrence of cases of tubercular disease has caused some disquietude in view of the overcrowded state of the building, to which reference has been made in previous reports. The question of the sufficiency of the present accommodation has formed the subject of a special report, and I need not reiterate what has already been said. It seems clear that additional accommodation, especially for males, will soon have to be provided, and in the meantime the locality to be chosen is a matter for consideration.

Buildings. — The extension of the female division, to which I have alluded on former occasions, has at last been completed. It consists of a two-storey block attached to the old south block, and having on each floor a verandah with eleven single rooms opening off it, a lavatory being provided at the further end of the building. Better provision for ventilation has been made than was the case in the old rooms, and the block is so placed that the prevalent winds blow across it; while the rooms, though not much larger than the older ones, give the impression of greater space, and look more cheerful. The relief afforded by it is very great—indeed, it is difficult to understand how it could have been done without for so long—but the amount of accommodation added is not quite so great as it seems, for previously some rooms, quite unfit for the purpose, had to be made use of as single rooms, and ceased to be so used when the new block became available. In a country such as this it is impossible to build in such a way as to provide the amount of ventilation necessary for comfort, and at the same time to prevent noise made by the inmates from being a source of disturbance to those outside; but regard was paid to this point when the site of the new building was chosen, and I think the inconvenience to the public has been minimized as far as was practically possible.

With the increase in the number of inmates the lavatory accommodation has become insufficient, and will soon require to be supplemented.

The Medical Superintendent's house, mentioned in my previous report as in course of erection, has been finished during the year under review, and constitutes an important addition to the equipment of the asylum. It is a handsome structure, situated near the main gate of the institution, and it reflects much credit on its architect, Mr. Taffs of the Public Works Department, and on those engaged in its erection.

Administration.—The water supply has at times been inadequate, and has thus led to some inconvenience. Unfortunately the asylum is at the end of a long branch of the water system, and there has recently been a large increase in the population of the district supplied by it, so that, while the asylum population has increased and needs more water, the supply available has diminished, especially during dry weather.

Numerous changes in the staff have taken place. The Assistant Medical Officer Miss Evelyn Davidson, whose appointment here was merely temporary, was replaced by Mr. K. J. de Silva, and the stewardship, vacant at the beginning of the year, was filled by the appointment (on probation) of Mr. E. Ludowyk. One of the two nurses resigned at the end of January. I have again to report well of the staff of attendants generally.

No really serious accidents occurred during the year; perhaps the gravest was sustained by a woman, who, in an attempt to escape, succeeded in getting on the top of the boundary wall, and in jumping down wounded her leg rather severely on the branch of an adjacent tree.

Industrial Department.—The industrial department has been, as usual, a valuable adjunct to the institution. The profit at the end of the year was Rs. 278·25 derived from investments.

Table showing the Forms of Mental Disorder in those admitted, discharged, and died in the Asylum in 1901.

* The numbers so marked differ slightly from those given in the "remaining" column last year. This is due to the transfer of certain cases admitted near the end of 1900, and whose real nature was not then clear, from one heading to another.

(10) REPORT of the Medical Superintendent, Leper Asylum, Hendala, Mr. W. H. Meier.

I HAVE the honour to submit the annual report of the Leper Asylum, Hendala, for the year 1901.

(1) *The Asylum.*

The asylum is now close on two centuries of its existence since its foundation, according to Dutch authorities, in 1708, which date also appears on a stone tablet in the institution bearing a monogram (H.B.) on a shield, which has recently been deciphered by the Government Archivist as the initials of the Dutch Governor Hendrek Boeker, who held office in Ceylon from 1707 to 1716. The foundation of the asylum at the date mentioned is also confirmed by a statement in a Dutch paper recently published in Holland, and official correspondence at the period between the Dutch Governors of Batavia and Ceylon, from which it appears that "the leper hospitals (Lazarushuys) at Malacca, Amboina, Ceylon, and the Coast of Malabar were built respectively in the years 1697, 1701, 1708, and 1724;" and as regards the institution in Ceylon, "that it had 25 lepers and contained 48 rooms, each large enough for the accommodation of 28 patients, considered by the Government of Batavia as much too large for the purpose, being built on too extensive a scale." The asylum therefore existed as a Government institution long before the British occupation of Ceylon, and its transfer to the British Government by a Dutch lady, who was herself a leper, as generally believed, is apparently beyond the fact and mythical.

A later and interesting account of the asylum appears in a communication dated 17th March, 1842, from J. Kinnis, M.D., an Army Medical Officer, who served in Ceylon, to the *Edinburgh Medical and Surgical Journal*, which I may here quote :—

> 'In October, 1834, and March and April, 1836, I paid seven visits to the Lunatic and Leper Hospital of Ceylon, and found at the first-mentioned date 25 lepers and 14 patients suffering from other diseases under treatment. Betwixt 1834 and March, 1836, there were admitted 12 lepers, and in March and April, 1836, the number of lepers in the institution had increased to 30. The officers and servants attached to the hospital were a Superintendent, an overseer, a medical sub-assistant, two gardeners, four female cooks, and two coolies for drawing water and carrying provisions from the bazaar, &c. Every patient was allowed by Government, monthly, one parrah of rice and four rixdollars, or 6 shillings sterling, which was expended for him in the purchase of other articles of food, his breakfast being hoppers (rice cakes) and coffee, his dinner and supper curry and rice. The daily expense of one patient's ration, in addition to that of the rice allowance, was about a fanam and a half, or six pice, which is equivalent to 2½*d*.

The daily cost of a patient's ration at present is 28 cents for a native and 50 cents for a European, and the daily average number of patients 272·29.

The asylum has since been reserved solely for lepers, having been considerably enlarged by the British Government, and numerous structural additions and improvements made, and its sanitary condition perfected in every detail for the convenience, comfort, and treatment of the inmates. It has now 19 wards, with accommodation for 328 patients, administration buildings, dispensary, dispenser's and steward's quarters, mortuary, soiled linen room, laundry, a regular and plentiful water supply in connection with the town supply, and a "Silchar cinerator" for the disposal of sewage. In addition, a Protestant Chapel, a Roman Catholic Church, and a Buddhist Pansala have been provided from private funds supplied by the several denominations for the special mode of the inmates.

Two necessary and important structural additions were made to the asylum during the year under review, a substantial and well-ventilated ward with bathrooms and latrines for 32 patients, and an infirmary with 16 beds for the separate treatment of sick lepers. The further extension of the asylum in view of the Lepers' Ordinance of 1901 and the extension of the cemetery attached to it, which is now overcrowded, are under consideration of Government.

(2) *Statistics.*

The general statistics for the year are as follows :—

	Males.	Females.	Total.
Remained on 1st January, 1901 ...	222	56	278
Admitted during the year ...	128	22	150
Total treated ...	350	78	428
Discharged	95	14	109
Died	32	11	43
Remained on 31st December, 1901 ...	223	53	276

There has been a slight increase in the number treated, being 29 more than in the previous year. The largest number resident was 287, the lowest 259, and the daily average 272·97. The average amount of cubic space was 1,038·55 cubic feet, the superficial area 67·25 square feet. The number of available beds was 282. There was no overcrowding during the year.

Admissions.—The number admitted was 150, 13 more than in the previous year; seventy-nine were new cases and 71 re-admissions. Of the new cases, 37 were of the mixed, 7 of the anæsthetic, and 15 of the tubercular form of leprosy, the duration of the disease varying from three months to twenty years. Thirteen Indian immigrants were admitted, of whom 4 were labourers from tea estates in the Island. There are no prohibitive measures adopted preventing the landing of lepers from India.

The new cases admitted are chiefly from Colombo and the Provinces, being distributed as follows :—

Western Province.

Residence.	No.
Colombo	19
Colombo District	5
Siyane korale	9
Salpiti korale	6
Rayigam korale	7
Panadure	2
Kalutara	1
Pasdun korale	1
Negombo	1
	51
Southern India	9

Central Province.

Residence.	No.
Matale	1
Kandy District	3
Nuwara Eliya	2
	6

Southern Province.

Galle	9
Matara	2
Hambantota	1
	12

Northern Province.

Jaffna	1

Eastern Province.

Batticaloa	1

Discharges.—One hundred and nine lepers were discharged at their own request, of whom 93 were relieved and 16 showed no signs of improvement. Twenty-six patients absconded, a larger number than usual, in view of their compulsory detention in the asylum for life under the Lepers' Ordinance, which was passed during the year.

Deaths.—Forty-three deaths from leprosy and supervening diseases were recorded during the year, the duration of the disease in these cases varying from one to twenty-five years.

(3) *Administration.*

A few additions were made to the staff of attendants, four ward servants being employed for work in the new ward and infirmary. One European leper inmate volunteered his services, and is performing the duties with much intelligence and assiduity of hospital orderly in the infirmary. The apothecary, steward, and matron continued to perform their respective duties to my entire satisfaction during the year.

(4) *Water Supply, Dietary, and Sanitation.*

The water supply, dietary, and sanitation of the asylum were in every way satisfactory. The "Silchar cinerator," which has been in operation for the last four years, is still useful and in good working order.

(5) *Bacteriological Investigations in Leprosy.*

Bacteriological investigations were undertaken and carried out in the asylum during the year, with the permission of Government, by Dr. Van Houtum, and have served to confirm the observations of Jeanselene, Laurens, and Sticker on the condition of the upper air passages in cases of leprosy and the nasal origin of the disease. Jeanselene and Laurens are stated to have examined the air passages of 25 lepers, and in 15 they discovered affections of the nose and throat. These regions are therefore affected in 60 per cent. of the cases. These statistics referred only to the cutaneous or mixed form, and not to the nervous. Sticker examined 153 lepers in India and found the lepra bacilli present in the nasal secretion 128 times, as well in the anæsthetic as in the tubercular and mixed form of the disease.

Dr. Van Houtum's observations, which were very carefully made, do not entirely confirm Sticker's results. Of 205 lepers examined by him in the asylum, the lepra bacilli were present in 129 in the tubercular and mixed form of the disease, but none were found in the anæsthetic cases, 66 of which were examined by him. The results obtained were in accord with the clinical appearances and diagnoses of the cases on admission. On a rhinoscopic examination of the cases, the nostrils were found more or less ulcerated in the tubercular and mixed forms, the clinical history of the patients showing a previous recurring epistaxis during the earlier stage of the disease. As far as my observation extends, I have never found the nostrils affected in anæsthetic leprosy, nor have I observed in this form an occasional or recurring hæmorrhage from the nose, which is more frequently met with in the tubercular and mixed form of the disease. According to Jeanselene and Laureus, occasional but persistently recurring epistaxis may be one of the first symptoms of leprosy, and they suggest that it may be as indicative a symptom in leprosy as hamoptysis is apt to be in pulmonary tuberculosis. Sticker is of opinion that as tuberculosis generally finds its first lodgment in the apices of the lungs, so leprosy most commonly originates in the nostrils. The "Nezen larguette," so frequently observed in tubercular and mixed cases, is caused by ulceration of the nostrils, the cartilage of the septum gives way, and the conformation of the nose alters.

Dr. Van Houtum in his investigations during the year has succeeded in obtaining a pure culture of the lepra bacilli in fish broth, all previous attempts at cultivation of the bacilli having proved futile. A report of his work in the asylum and the Bacteriological Institute in Colombo during the year has, I believe, been submitted by him to the Government of Ceylon.

(6) *Outdoor Dispensary.*

There was a large diminution in the number of patients treated as compared with the previous year, owing to a considerable decrease in the number of malarial cases. 1,487 patients attended the dispensary, as against 2,037 in the previous year; the collections, amounting to Rs. 486·10, were remitted to the Colombo Kachcheri. Seventeen new cases of leprosy and one previously reported received outdoor treatment at the dispensary. A return of these cases is included in the annual returns. The principal diseases treated were malarial fever, rheumatic affections, anæmia, respiratory diseases, diseases of the digestive system, dysentery, and skin affections.

Malarial Fever.—Malarial, remittent, and intermittent fever was more prevalent in January and December during the north-east monsoon, but not especially confined to any one locality, as it was in the village of Palliyawatta during the previous year. 369 cases were treated at the dispensary, as against 631 in 1900, and occurred chiefly in persons who were employed in plumbago pits.

Diarrhœa and Dysentery.—Of these, only 42 cases were recorded of a mild form and amenable to treatment.

Respiratory Diseases were of less frequent occurrence, and included 10 cases of pneumonia in sporadic form.

Rheumatic Affections occurred in 81 cases, being a slight increase in the number reported in the previous year.

The health of the district continued satisfactory, and there was general immunity from epidemic diseases during the year.

(7) *Garden Fund.*

The receipts from garden produce, Government allowance, and expenditure on betel, &c., during the year were as follows:—

	Rs.	c.
Receipts from garden	1,025	40½
Government allowance	747	23
Total ...	1,772	63½
Expenditure on betel, &c.	1,540	14
Balance ...	232	49½

The inmates received the usual Christmas gratuity and a handkerchief each from Government.

Their Excellencies the Governor and Lady Ridgeway, accompanied by the Principal Civil Medical Officer, visited the asylum on 1st November, 1901.

---

(11) REPORT of the Port Surgeon, Mr. H. A. Keegel, L.F.P. and S. Glas., L.R.C.P. Edin.

I HAVE the honour to submit my report for the year 1901. It was another year of immunity from plague and of comparative freedom from other forms of infectious disease introduced from without. It was, notwithstanding, a year of intense anxiety and suspense, involving the exercise of strict vigilance.

During the year one case of plague occurred on board the ss. "Parramatta" on her voyage from Bombay. The case proved fatal a few hours before the arrival of the vessel at Colombo; the body was buried at sea. The vessel took in coals, transhipment cargo, and passengers in strict quarantine and left for China.

The number of cases of infectious disease landed here from vessels and removed to the infectious diseases hospital was exceptionally small, and consisted as follows:—6 cases of smallpox, 2 of chickenpox, and 1 of measles. No cases of cholera occurred in the port during the year.

The regulations regarding the inspection of vessels and of all arrivals at this port, passengers or crew, and the disinfection of soiled linen remained unaltered. In August the hulk, which since its arrival here from Singapore in 1899 did duty as a hospital ship, was taken over by the police, and disinfection was carried on at a station established at Kochchikada, where suitable buildings were erected and a water supply laid on. Two Thresh's patent steam disinfectors have been fitted up in one of the blocks, while the others are used as waiting-rooms, lavatories, &c. The land round the station has been fenced in.

Disinfection.—During the year 984 cradles of soiled linen were disinfected, and a sum of Rs. 2,422·50 realized thereby was placed to the credit of Government.

Bills of Health.—The figures stand as follows:—

Outstanding at end of 1900	...	10
Issued during the year 1901	...	1,406
Total ...		1,416
Deduct *free* bills	113	
Outstanding at end of 1901	8	
	—	121
Balance ...		1,295

At Rs. 10·50 = Rs. 13,597·50.

This sum went to the credit of Government.

Staff.—During the year the services of the female Assistant Port Surgeon were discontinued. Mr. Alles, Sub-Assistant Colonial Surgeon, was replaced in September by Mr. H. P. Joseph, L.M.S., as Assistant Port Surgeon.

---

(12) REPORT of the Registrar, Ceylon Medical College, Dr. A. J. Chalmers, F.R.C.S. London.

Introductory.—I beg to report that I took over the duties of Registrar of this College at the end of March. I found the College very badly equipped and organized. There was an almost absolute lack of prizes or of any means to stimulate the pupil to work. Practical education was at a low ebb. The College Calendar was only a calendar in name, very little attention being paid to its rules.

General Medical Council of Great Britain.—During the year it has been found that the qualification of the College has been recognized since 1888 by the General Medical Council after a Privy Council order, and that the legal qualification was L.M.S. (Licentiate in Medicine and Surgery), and that this entitled the holder to practice in any of His Majesty's dominions, including Great Britain and Ireland, except where excluded by local law. It was then found that the regulations of the General Medical Council had not been conformed with, and this was rectified by—

(1) The registration of students; this not having been properly carried out before.
(2) The re-writing of the Calendar and bringing it into line with modern requirements and with the old standard of the College in 1885, which standard was the means of its being recognized in England.

Improvements in the Teaching, &c.—To remedy the defects in the College much has been done:—

(1) A scheme for the proper working of the College and for the provision of laboratory, &c., in order that the teaching might be modern and up to date, has been laid before the Government.

(2) A lecturer on Physics at Rs. 1,000 has been appointed, the Registrar taking over temporarily the duties of lecturer on Pathology and the work of Pathologist in the General Hospital without remuneration, thus liberating enough money to pay for the lecturer on Physics.

(3) By the introduction of proper courses of instruction in—

Physics.
Organic Chemistry.
Extension of the Inorganic Chemistry.
Practical Inorganic and Organic Chemistry.
Extension of the Biology courses—more practical work.
Embryology.
Physiological Chemistry and practical work.
Pathological Chemistry and practical work.
Practical Toxicology.
More complete course of Practical Surgery.

(4) By the appointment of Dr. J. de Silva, who is a skilled Bacteriologist, as lecturer on Bacteriology and temporary lecturer on Physics.

(5) By improving the preservation of the anatomical bodies, so that they can be kept without any sign of decomposition for upwards of two months, thus allowing ample time for the proper dissection of the body.

(6) Revision of the specimens in the Pathological Museum and the preparation of a provisional catalogue.

(7) Improvements in the course of training of the apothecary students.

(8) By many improvements in the office work of the College.

College Prizes.—To stimulate the students, the following prizes have been presented to the College by generous donors, chiefly through the kind influence of Drs. Sinnatamby, Attygalle, and De Silva :—

(1) "The De Silva Medal," for Physics, by J. Clovis de Silva, Esq.
(2) "The Sanmugam Gold Medal," for Physiology, by T. Sanmugam, Esq.
(3) "The Nielsen Medal," for Practical Anatomy, by C. Leth Nielsen, Esq.
(4) "The Tyagaraja Medal," for Materia Medica and Therapeutics, by N. Tyagaraja, Esq.
(5) "The Loos Medal," for Pathology, by Mrs. Chalmers.
(6) "The Dharmasiriwardena Gold Medal," for Midwifery, by A. S. Fernando Jayasekera, Esq.
(7) "The Mathew Gold Medal," for Clinical Surgery, by C. Mathew, Esq.

License and Apothecary Certificate Examinations.—The examinations have been brought into line with modern requirements and definite rules formulated, so that every student may definitely know what is required of him before he is allowed to present himself for an examination.

The results of the examinations are now to be published in two classes : 1st, in order of merit ; 2nd, alphabetically ;

In order to stimulate the students, the Government has kindly given the following prizes :—

Preliminary.

(1) The Medical Preliminary Government Scholarship.
(2) Medical Preliminary Medal.

First Professional.

(3) First Professional Medal.

Second Professional Medal.

(4) Second Professional Government Scholarship.
(5) Second Professional Medal.

Third Professional.

(6) The Diploma Medal.

Apothecaries.

(1) Apothecaries' Preliminary Scholarship.
(2) Apothecaries' Preliminary Medal.
(3) Apothecaries' First Examination Scholarship.
(4) Apothecaries' First Examination Medal.
(5) Apothecaries' Certificate Medal.

Students' Library.—A very few books have been obtained by fees drawn from the students. The library is open for reading purposes from 9 A.M. to 1 P.M. Books are, however, urgently needed for this library. Few as the books are, still the students find them very useful, and apparently much appreciate the kind gift of Mr. A. Simon Fernando Wijeygooneratna, Muhandiram.

College Publications.—In order to meet the needs of the students a series of practical manuals called Ceylon Medical College "Syllabus Series" has been started, and volume I., on Practical Physiological Chemistry, price Re. 1, has been published. It is hoped that during the next year one or two more of these practical volumes will follow.

Admission of Non-Medical Students.—In order to stimulate the knowledge of Science, which is sadly lacking in this Island, certain classes of the College have been thrown open to the general public upon payment of fees. These include Chemistry, Physics, Biology, Physiology, Embryology.

Original Work. — Some original work in connection with certain branches of medical knowledge has been begun by certain students in the College.

The Internal Working of the College.—This still leaves much to be desired, but a scheme has been forwarded to the Government to place the College on a firm basis and to provide a Council.

The Number of Students.—It appears that no proper record of the number of the students actually working in College was kept till last October. The May list was made on the old plan, and it was found that this was not accurate. During the year nine new medical students entered the College and nine apothecary students. In October, when the list was carefully made, there were—

Medical Students	76
Apothecary Students	52
Total ...	128

Fees.—The total amount of fees collected during 1901 was Rs. 12,991·44, which were arranged as follows :—

	Rs. c.
Credited to revenue	11,975 64
Preliminary examination fees	357 0
Library fees	658 0
Total ...	12,991 44

The total fees in 1898 were	7,272 0
Do. 1899 do.	7,703 0
Do. 1900 do.	11,208 0

Thus, the fees paid to revenue in 1901 showed an increase of Rs. 767 over the fees of 1900, and a total increase of Rs. 1,783 over the total fees in that year, while the increase over 1899 was Rs. 4,272, and over 1898 Rs. 4,703. In fact in three years the fees have nearly doubled.

Correspondence.—The correspondence of the College has increased very considerably, coming not merely from Ceylon, but India, England, the Straits Settlements, and Hongkong.

---

(13) REPORT of the Medical Officer in charge of the Lady Havelock Hospital, Mrs. M. N. Fysh, M.B. London.

I HAVE the honour to submit my annual report for 1901.

The total number of patients treated in this hospital during the year was 1,030, as against 934 in 1900, the number being larger than in any previous year. Of this number, 256 were children under ten, compared with 228 the year before, 113 being boys and 143 girls.

The total number of deaths was 71, giving a rate of 6·8 per cent.

There were 11 cases of enteric fever, with 2 deaths, giving a rate of 18·18 per cent. The diagnosis was in each case verified at the Bacteriological Institute by means of Widal's test. There were 32 cases of dysentery, with 5 deaths, giving a rate of 15·62 per cent. There were 47 surgical operations, with 2 deaths.

The number of cases of diseases peculiar to women was 148, as compared with 80 in the previous year. The total number of Mohammedans was 49.

There were 34 paying patients, as compared with 21 the year before, and only 14 in 1899. Of the 34, 19 were Europeans, 9 Burghers, and 6 Sinhalese.

The Nursing Staff and Training School.—Miss Wollen has continued her work as matron of the hospital to my great satisfaction, and since July, 1901, has been ably assisted by Miss Elinor Bell of St. Bartholomew's Hospital, London, who then took up duty as assistant matron in place of Miss Croft, who resigned in February.

The work of training the pupil nurses has proceeded satisfactorily. Three pupils were examined in July, and obtained certificates. One nurse only was moved before completing her training, and she was sent to the Kandy hospital in May.

The Branch Hospital, Borella.—The total number of patients treated in this hospital in 1901 was 298. Two died, one being a case of tertiary syphilis, greatly emaciated, with perforation of the palate and ulceration of the rectum. The other was a child prematurely born in the hospital (seven months), who lived only one day.

---

(14) REPORT of the Medical Superintendent of the De Soysa Lying-in Home, Dr. M. Sinnatamby, M.D. Brux., F.R.C.S.

I HAVE the honour to submit my annual report of the above institution for the year 1901.

The total number of patients treated during the year was 499, as against 521 in 1900 and 162 in 1890. Of the total number treated, 466 were discharged cured, 1 removed by relations relieved, 4 died, and 19 were remaining at the end of the year. The percentage of deaths to total treated was 0·80, as against 2·11 in 1900 and 3·08 in 1890. Of the 4 deaths recorded during the year, 1 was due to anchylostomiasis, 1 to dysentery, 1 to puerperal eclampsia, and 1 to hæmorrhage seven days after delivery (secondary post-partum hæmorrhage). Of 6 cases of puerperal eclampsia admitted, 1 proved fatal, giving a percentage of 16·66. The case of hæmorrhage occurred seven days after delivery. It came on suddenly, when the patient attempted to walk. Post-mortem examination proved that the hæmorrhage was from the placental site. The other two deaths were due to general diseases. One interesting fact worthy of note is that very few patients survive labour complicated with anchylostomiasis in its advanced stage. Of 487 admissions during the year, 475 were admitted before delivery and 12 after delivery. Of the 475 admitted before delivery, only 7 were admitted before commencement of labour.

In the following tables I have followed the classifications adopted in the Madras Maternity Hospital in a modified form :—

Table I.—Classification of Obstetric Cases.

Class.	Division.	Subdivision.	Admitted.
Natural ...	Purely natural ...	*Occipito*-anterior ...	291
	Variety... ...	*Occipito*-posterior ...	10

The admissions have more than trebled within the last ten years. One noteworthy feature was the admission of 8 patients belonging to the Mohammedan community.

The Lying-in Home as a training institution has been doing good work. During the year under review five paying and five native pupil midwives were admitted; five of the former and four of the latter received certificates on passing the required examination.

European systems of conducting labour will be appreciated more keenly if native pupil midwives were trained and sent to different villages all over the Island to replace the ignorant village midwives. This could be effected by encouraging village women to apply for admission into our training institution. Colombo has a sufficient number of midwives, and in future applications from residents other than in Colombo only should be entertained. Notices to medical officers and headmen in different parts of the Island should be issued to recommend women for the training institution. If sufficient inducement is held out by guaranteeing travelling expenses and the usual monthly stipend, I am sure within a short time a good number of midwives can be trained and sent to different parts of the Island, which will prove a great blessing to suffering humanity. All difficult cases of labour are now left to the tender mercies of ignorant village midwives, whose brutal treatment has on more than one occasion been prominently brought to my notice.

The equipment allowed proved quite inadequate to the requirements of the institution. The accommodation for nurses requires to be increased. Provision has been made to build two rooms, one to be utilized as an operating room and the other for treatment of septic cases.

The staff of the institution consists of a Medical Superintendent and a matron. The increase in the admission of paying patients has sorely taxed the energy of the matron. It is impossible for a single matron to attend to the paying and pauper patients of this institution. I will again urge the necessity of appointing an assistant matron to this institution.

The dispensing and a portion of the clerical work are done by an officer of the Ceylon Medical College, who receives Rs. 10 a month charged under Wages. The question of appointing a resident dispenser has become a necessity, as the officer of the College is only available at certain hours on week days. There are no paid attendants or paid nurses attached to this institution, and all cleaning and scrubbing and washing have to be done by the pupil midwives.

I cannot close this report without bearing testimony to the efficient work done by the matron.

---

(15) REPORT of the Director, Bacteriological Institute, Dr. Joseph S. de Silva, M.B., D.P.H.

FOR the greater part of the year 1901 I helped Dr. H. M. Fernando, the late Director, in carrying out the work that devolved upon this institute. From the beginning of March, soon after my arrival in Ceylon, I have been in daily attendance, not only doing the routine work, but undertaking some research work as well.

The routine work comprises the examination and analyses of various materials for Government and other institutions and private medical practitioners. The examinations are mainly in aid to the elucidation of the nature and in the diagnosis of different diseases. During the year the undoubted existence of diphtheria in the Island was conclusively proved after complete and thorough investigation; this fact had hitherto been a matter of considerable doubt owing to the want of positive proof.

The following is a list of analyses carried out at this institute during the year:—

(1)	Examinations of sputa for the detection of the tubercle bacillus ...	145
(2)	Examinations of blood for Widal's reaction (for typhoid fever) ...	178
(3)	Examinations of secretions for the cholera bacillus ...	7
(4)	Examinations of secretions for the detection of the diphtheria bacillus ...	3
(5)	Examinations of other specimens	18

Of these, 41 specimens of sputa, 56 of blood for Widal's reaction, 2 of secretions for the diphtheria bacillus, and 6 other specimens were sent by private medical practitioners, the rest being all from Government institutions.

The Government institutions for which work was undertaken are the following:—

(1) General Hospital, Colombo.
(2) Lady Havelock Hospital, Colombo.
(3) Infectious Diseases Hospital, Colombo.
(4) Borella Convict Hospital, Colombo.
(5) Police Hospital, Colombo.
(6) Lunatic Asylum, Colombo.

In all nineteen different private medical practitioners took advantage of the help provided by this institute.

The work of 1901 shows a decided increase on that of the previous year, the year of the foundation and origin of the institute. Further, there is every evidence to show that this work will increase much more in the future. As private medical practitioners see the advantages of the aid offered to them, the number who seek such aid is sure to be greater as time goes on. No charges were made for the work undertaken for such practitioners or other departments during the year.

A new assistant, Mr. Arthur C. de Silva, was appointed in July, in succession to Mr. H. J. Fernando, L.M.S., who was transferred to the Kandy hospital as House Surgeon. The Directorship of the institute from its inception up to the end of the year was held by Dr. H. M. Fernando as an honorary appointment, and in addition to his other responsible duties.

From August Dr. Van Houtum, a Boer prisoner of war, with authority from Government, has been carrying on investigations on leprosy, a disease widespread in the Island, and the bacteriological aspect of which is yet obscure. The results of the investigation will be published at an early date.

---

(16) REPORT of the Chief Medical Officer, Prisoners of War Camp at Diyatalawa, Mr. T. F. Garvin, M.B., C.M.

1.—GENERAL.

(*a*) *Strength.*

ON the 31st December, 1900, the number of prisoners of war in the Diyatalawa Camp was 4,256. Since then two batches arrived, the first of 590 on the 10th January, 1901, and the second of 103 on the 31st May, 1901. The strength of the camp at the end of each month and the daily averages were as follows:—

Month.	Strength at end of each Month.	Daily Average for the Month.
January	4,493	4,380
February	4,398	4,482
March	4,345	4,363
April	4,385	4,361
May	4,466	4,378
June	4,466	4,470
July	4,479	4,470
August	4,451	4,457
September	4,224	4,313
October	4,144	4,174
November	4,091	4,098
December	3,995	4,006

From time to time prisoners of war were sent to the convalescent depôt at Mount Lavinia for change of air and scene, or were transferred to the subsidiary camps at Ragama, Urugasmanhandiya, and Hambantota.

(*b*) *Climate and Meteorology.*

A meteorological observatory was established in January, and complete observations have since been taken and recorded. The following is a summary of the observations of most interest:—

Month.	Adopted Maximum Temperature of Air for Month.	Highest Maximum in Shade.	Mean Maximum in Shade.	Lowest Minimum in Air.	Mean Minimum in Air.	Mean Degree of Humidity (Saturation = 100).	Rainfall.	Average Sunshine per Day.	Mean Amount of Cloud.
	°	°	°	°	°	°	In.	Hours.	
January	66	77·5	73·8	50·7	58·2	74	2·00	—	—
February	69·2	80·8	76·7	53·5	58·2	71	3·54	—	5
March	69·9	80·7	77	50·5	58·4	68	3·71	—	4·5
April	71·6	82	78·8	57	61	71	9·21	—	5·7
May	73·5	85·5	80·8	56	61·9	63	4·20	9	4
June	71·8	82·8	78·7	52	61·4	63	3·31	8	5
July	72·9	84	80·2	55·2	61·2	55	—	9	4
August	74·1	85·2	82·1	53	60·9	52	0·21	9·5	4
September	72	83·2	79·3	58·8	61·2	64	5·31	6·9	5·2
October	71	83·8	78·4	54	60·1	65	4·10	7·6	5
November	68·8	80·8	75·4	52·6	59·8	72	4·37	6·9	6
December	66·8	78·5	73·2	52	58·2	73	4·13	6·5	5·5
For the year 1901	70·6	85·5	77·8	50·5	60	66	54·09	8	5

Rainfall.—The total rainfall for the year was 54·09 inches.

Humidity.—The average humidity of the atmosphere for the year was 66 per cent. of saturation.

(*c*) *Sick Rate.*

The total number of sick treated in the various hospitals in the camp during 1901 was 1,153. Of this number, 273 remained over on the 31st December, 1900, and 880 fresh cases were admitted during 1901.

The following table shows the average strength of the camp from month to month, the numbers admitted to hospital, and the ratio of sick to the average strength per 1,000 :—

Month.	Average Strength of Camp.	No. of all Cases admitted to Hospital.	Ratio of all Sick to Average Strength per 1,000.
January ...	4,380	123	28·08
February ...	4,482	59	13·16
March ...	4,363	78	17·83
April ...	4,361	86	19·72
May ...	4,378	73	16·67
June ...	4,470	113	25·28
July ...	4,470	51	11·40
August ...	4,457	65	14·58
September ...	4,313	62	14·37
October ...	4,174	61	14·61
November ...	4,098	50	12·20
December ...	4,006	59	14·72

(*d*) *Mortality Rate.*

The total number of deaths during 1902 was 32, and of this number 31 occurred in the hospital and 1 in the camp. The single death in camp was due to heart disease, and occurred quite suddenly. Thirty-one deaths in the hospital resulted as follows :—12 from enteric fever ; 19 from all other diseases.

The following table shows the ratio of all deaths to the average strength of the camp per 1,000 :—

Month.	Average Strength of Camp.	No. of Deaths from all Causes.	Ratio of all Deaths to Average Strength of Camp per 1,000.
January ...	4,380	3	0·67
February ...	4,482	6	1·31
March ...	4,363	7	1·60
April ...	4,361	2	0·45
May ...	4,378	2	0·45
June ...	4,470	—	—
July ...	4,470	3	0·67
August ...	4,457	3	0·67
September ...	4,313	—	—
October ...	4,174	3	0·71
November ...	4,098	1	0·24
December ...	4,006	2	0·50

Taking 4,329 as the daily average strength for the whole year, the mortality rate is 7·39 per 1,000, and excluding enteric deaths only 4·62 per 1,000.

2.—MEDICAL.

(1) *Staff.*

Professional.—The professional staff at the end of the year consisted of myself as Chief Medical Officer, L. A. Prins, L.M.S. (Ceylon), F. Keyt, L.M.S. (Ceylon), H. M. Leembruggen, L.M.S. (Ceylon).

Nursing.—The nursing staff at the end of the year consisted of Nurses Van Dadelszen and Nell. Sister Lucy, who was in full charge, left on the 31st March, 1901, and Nurse Gray retired in December.

The orderlies employed were reduced in number as the health in the camp improved. In January 36 of them were employed, at the end of the year only 15.

(2) *Hospitals.*

At the end of 1900 the available hospital accommodation consisted of 395 beds, as follows :—

	Beds.
Boer Hospital, Ward I.	25
Do. Ward II.	25
Do. Ward III.	8
Do. Ward IV.	25
Convalescent Hospital	24
Isolation Hospital	10
Segregation Hospital	42
Huts 37, 38, 39, 40	200
Total ...	359

By the end of 1901 the following were abandoned :—

Huts 37, 38, 39, 40	200
Wards III. and IV., Boer Hospital	33
Segregation Hospital	42
Total ...	275

and the number of beds in wards I. and II. of the Boer hospital were reduced to 18 each, and those in the isolation hospital to 8, and those in the convalescent hospital to 20, thus leaving 64 available beds for patients.

(3) *General Health.*

The general health of the camp steadily improved during the year, and at its end it could not be better.

(4) *Outdoor Dispensary.*

The total number of cases treated at the outdoor dispensary was 3,995 new cases and 5,064 old ones, making a total of 9,059 visits, or an average of about 25 per day.

(5) *Diseases treated in the Hospital.*

The total number of cases treated in the various hospitals during the year was 1,153. Of these, 31 died, 1,074 were discharged, and 48 remained under treatment.

Dysentery.—The total number treated was 72, of which 60 were admitted during the year. Three of these died, a mortality of 4·16 per cent. A large proportion of the cases were simple; those that died were of a grave character.

Malarial Fevers.—The total number treated was 108. All recovered. They belonged to the class of intermittents and remittents in nearly equal proportions, and a large proportion were recrudescences of old malaria contracted in South Africa. Some undoubtedly developed in the camp, in and about which the number of anopheles was surprisingly small. The cases were relatively numerous in February, March, and April; since then the numbers diminished, and in November and December the admissions were only one each month.

Debility.—No less than 156 cases of debility were treated, 155 being new admissions. One of these cases died. These cases constitute no less than 13 5 per cent. of all the patients during the year.

Nervous Diseases.—There were in all 24 cases of nervous diseases treated, and of these one, a case of cerebral apoplexy, died. There were two cases of mania and five of melancholia. The former were sent to the Lunatic Asylum, where one died. The cases of melancholia were mostly of a pronounced religious character.

Circulatory Diseases.—There were 6 cases, one of which—a case of valvular disease of the heart—died.

Respiratory Diseases.—Total treated 42. Of these, two died, one a case of pneumonia and the other a case of empyema.

Digestive Diseases.—Total treated 188. Of these, four died, one each from cancer of liver, cancer of stomach, peritonitis, and appendicitis.

Venereal Diseases.—There were remarkably few cases of these. A few prisoners of war contracted gonorrhea, and were treated at the dispensary.

Mumps.—In all 26 cases of mumps occurred in the camp. All terminated in recovery.

Enteric.—The total number of enterics treated during the year was 359. Of these, 111 were admitted during the year and 248 remained over in December, 1900. The number of deaths was 12, *i.e.*, a percentage of 3·3 of the total number treated, or 10·9 of the total admitted during the year. The last case of enteric occurred on the 29th November. Since then there has been no admission under this head.

Operations.—The following is a list of the operations done during the year:—

Operation for strangulated hernia	1
Operation for radical cure of hernia	1
Incision and drainage of hydatid (suppurative) of liver	1
Operation for radical cure of hydrocele	1
Operation for phimosis	2
Incision and drainage of hepatic abscess	1
Incision and drainage of large abscesses	8
Ligature and incision of hemorrhoids	2
Sequestrotomy	1
Removal of non-malignant tumor...	4

Of these, the case of hydatid of liver and one of large abscess died. The rest recovered, and were at the end of the year convalescent.

III.—SANITARY.

Drainage.—No new drainage works of any extent or influence were undertaken since the date of my last report. The camp is at present very satisfactorily drained, and the soil kept free of humidity.

Water Supply.—The supply of water has been ample, and the quality as ascertained by repeated analysis good.

Food.—The daily ration has been more than ample.

Removal of Excreta.—The system in vogue, detailed in last report, is working satisfactorily.

The general sanitary state of the camp has been satisfactory.

---

(17) REPORT of the Medical Officer, Prisoners of War Camp at Ragama, Capt. W. P. Gwynne, R.A.M.C.

I.—GENERAL.

THE Boer Camp at Ragama was opened on 8th January, 1901, when 250 men and officers arrived from Diyatalawa:—

	Men.	Officers.
Second batch, January 10	21 ...	4
Third batch, March 12	45 ...	5
Fourth batch, August 4	6 ...	6
Fifth batch, September 15	4 ...	—
Sixth batch, October 14	35 ...	—

The strength of the camp on—	Number.
January 31	284
February 28	283
March 31	333
April 30	327
May 31	323
June 30	318
July 31	314
August 31	315
September 30	305
October 31	331
November 30	322
December 31	316

Seventeen prisoners were released on medical grounds and nine for other causes. There are about twenty prisoners of war on parole at Jaffna, Kandy, or Nuwara Eliya.

II.—SANITARY.

Drainage.—There are surface cement drains all over the prisoners' enclosures, and they have proved most satisfactory, having been tested by heavy rain.

Water Supply.—The water is pumped from two wells close to the railway line into seven reservoirs, holding 6,460 gallons in all. The water is of good quality, as tested by three analyses during the year, and is sufficient for all requirements. It is distributed over the camp by stand-pipes. Two of the old cooly camp reservoirs have been utilized as swimming baths for the prisoners of war.

On the 14th December charcoal and sand chatty filters were instituted in the camp, two filters for each hut and two for each dining-room. This was done on account of the deposit of iron in the water from the reservoirs and pipe.

On 3rd November the following diet was recommended :—Beef or mutton ¾ lb., instead of 1¼ lb.; peas or beans, dried, 4 oz., to make up for the loss of meat. The remainder of the ration to be as before. Since the 10th December, as no fruit was allowed in the camp from that date, ½ oz. lime juice daily has been issued. The food is of good quality.

Removal of Excreta.—The latrines are worked on the dry-earth system. A pint of the following solution is put into each bucket every day : Corrosive sublimate 1 in 1,000, with ten parts of chloride of sodium, the solution being coloured with methyl blue. The buckets are emptied twice daily, and the excreta burnt in the incinerator, which is acting well. The urine is conveyed by cement drains into pits in which broken bricks and coke have been placed.

Ablution.—A large ablution room has been provided in each camp with concrete flooring sloping to a central drain. Tubs and buckets have been provided for washing purposes.

Dwellings.—These consist of cadjan huts with galvanized iron roofs and concrete floors. Each hut accommodates 55 prisoners, and is 100 feet in length and 25 feet in breadth.

Ventilation.—The upper portion of the side walls of the huts consist of cadjan tats, which are raised during the day, allowing thorough ventilation. All the beds and bedding are put out in the sun daily in fine weather, and clothes lines are provided for hanging out blankets, towels, clothing, &c.

Clothing.—This is issued liberally to the prisoners of war according to requirements and medical recommendation.

Recreation.—Swimming baths and horizontal and parallel bars have been provided for this purpose.

Climate and Meteorology.—The climate of Ragama is on the whole very good. Meteorological observations were taken from 15th January.

Rainfall.

Month.	Rainfall. Inches.	Greatest Fall any one Day. Inches.	No. of Days on which Rain fell.
February	2·55	·94	8
March	5·58	1·52	11
April	10·13	1·97	21
May	6·20	1·78	20
June	10·56	2·08	26
July	8·84	2·14	17
August	·89	·42	7
September	3·96	1·88	13
October	6·84	1·74	16
November	27·44	5·29	23
December	2·23	·97	8

The largest rainfall on any one day was 5·29 inches on 11th November. Rain fell on 170 days out of 317. The total rain registered was 84·22 inches.

Month.	Mean Temperature of Air.	Highest Maximum.	Mean Maximum.	Mean Minimum.	Lowest Minimum.	Mean Humidity.

III.—MEDICAL.

Hospital.—There is one hospital consisting of a ward with accommodation for 20 patients. There were 148 cases treated in hospital up till the end of December. Of these, 40 cases were dysentery of a mild form, which yielded easily.

The largest number in hospital on any one day was 14; the smallest 3. Percentage of sick to prisoners for the year was approximately 3·5. One death only occurred, due to enteric fever.

There have been three cases of enteric fever, all of which can be traced to having owed their origin to Diyatalawa.

There have been two cases of mumps, brought from the ship the prisoners landed from.

There have been twenty-one cases of ague treated in hospital, a mild form, and all in patients who had previously suffered from the disease elsewhere, and none acquired here.

A large number of patients attended hospital for "inflammation external meatus ear." Latterly there have been fewer cases of the above.

The hospital staff consists of myself in charge, an apothecary, and nurse orderlies from among the prisoners of war. These orderlies perform their duties to my entire satisfaction. Many prisoners have been recommended for change to Mount Lavinia, Jaffna, Hambantota, or Diyatalawa, and some for parole at their own expense.

The hospital supplies have been to my entire satisfaction. The invalid diets have been well cooked and served.

---

(18) REPORT of the Medical Officer, Prisoners of War Camp at Mount Lavinia, Mr. V. van Langenberg, L.R.C.P., M.R.C.S.

General.—The strength of the camp on the 31st December, 1901, was 139. Transfers of prisoners of war have taken place six times during the year on the following dates, the average stay of a prisoner of war in this camp being about four months.

Date of Departure.		Date of Arrival.	
February 21	25	April 20	50*
April 20	43	April 23	97†
June 5	50	June 7	50
August 5	50	August 7	62
October 7	50	October 9	50
November 11	50	November 13	30
February 23	25		

* From ss. "Atlantian." † From Diyatalawa.

General Health.—No case of serious illness has occurred in the camp, and the general health has been very satisfactory. The number treated at the outdoor dispensary for each month is as follows:—

January	21
February	35
March	27
April	110
May	301
June	212
July	184
August	277
September	229
October	189
November	113
December	59
Total ...	1,051

The daily average for the year was 4·81.

The diseases treated were of minor importance, the chief complaints being dyspepsia and diarrhœa. A few mild cases of malarial fever and dysentery also came under treatment, and were generally cured in two or three days.

Five prisoners of war, who were not benefited by the change, were allowed to return to Diyatalawa.

Hospital.—A small hospital of three beds was opened on the 29th October, and is located in the guard room of the permanent military barracks. There were four cases treated in hospital up to the end of the year. Cases, however, which require prolonged hospital treatment continue to be sent to the General Hospital, Colombo. Twenty such cases were transferred during the year, among whom were 3 cases of enteric fever (relapses ?), 2 of dysentery, 1 of appendicitis, 2 of abscess of the liver, 1 of hydatid cyst of the lung, 1 of cancer of the stomach, and 1 of pernicious anæmia.

Deaths.—Two deaths occurred in the camp during the year: (1) Uræmia (chronic Bright's disease); (2) meningitis, result of over-exposure to the sun.

Water.—The water is good, and is obtained from a well near the camp. It is filtered before being issued to the prisoners of war.

Food.—The food is of good quality, and the complaints have been very few and of no consequence. The cooking is done by native cooks, and the prisoners of war seem very satisfied with it.

Latrines and Urinals.—The latrines are worked on the dry-earth system. The buckets containing the solid excreta are emptied once a day, and before being returned are washed and charged with a solution of Jeye's or Macdougall's fluid. Each latrine has a galvanized iron trough for urine fitted in it, and the urine is carried by means of a pipe to an open drain, which empties itself into a pit filled with broken brick and dressed with sulphate of iron.

Buildings.—The huts occupied by the prisoners of war, four in number, are lofty and well ventilated. Two huts accommodate 25 each and two 50 each. There is also a large dining-hall fitted with ten tables and seating accommodation for 100 men.

Baths, &c.—Every facility is afforded the prisoners of war for fresh water bathing, and they are provided with an excellent bathing-place with fourteen cement baths. They also bathe in the sea, but they have been informed that the coast is dangerous.

Drainage.—Two well-built cement surface drains carry away the slops and storm water from the camp, and have proved satisfactory.

Exercise and Recreation.—The prisoners of war are allowed to roam about at will on the seashore, a mile of which is at their disposal, between the hours of 6 and 9 in the morning and 4 and 6·30 in the evening. Football and quoits are favourite outdoor games.

Clothing.—Clothing is issued liberally. An inspection of "kit" is made once a week.

Staff.—The staff consists, besides myself, of an apothecary and a hospital orderly, a prisoner of war.

---

(19) REPORT of the Medical Officer, Prisoners of War Camp at Urugasmanhandiya, Mr. V. van Langenberg, L.R.C.P., M.R.C.S.

GENERAL.

THE camp at Urugasmanhandiya was opened on the 11th September, 1901, when 4 officers and 172 men arrived from Diyatalawa, and this number was added to from time to time. The strength of the camp on the 31st December, 1901, was 356 (officers 4, men 352).

SANITARY.

Situation.—The camp, which is 4 miles from the Kosgoda railway station on the road to Elpitiya, is pitched on high ground, well above the surrounding paddy fields.

Drainage.—The slops and storm water are carried away by large surface drains, which have proved very satisfactory.

Buildings.—The huts occupied by the prisoners of war are built of mud and wattle, with thatched roofs and floors of rammed earth. The side walls are about 3 ft. high, the upper portion consisting of cadjan tats, which can be raised or lowered as required. The huts are lofty and well ventilated. Each hut is about 120 ft. long and 15 ft. wide, and accommodates 46 men. There are four separate huts for the men to dine in.

Water.—The drinking water is obtained from a well near the camp. It is of good quality as reported by analysis, and there is a plentiful supply. The water is pumped into water carts and is distributed round the camp.

Food.—The food is of good quality, and the cooking, which is done by native cooks, is excellent. The complaints have been very few and of no consequence. Alcoholic drinks are allowed and are sold in the camp at very moderate prices. Each prisoner of war is permitted to buy 1 glass of spirits or 2 pints of beer or stout a day.

Latrines and Urinals.—There are two sets, one at the eastern and the other at the western end of the camp. The latrines are worked on the dry-earth system. The buckets are emptied once a day, and the solid excreta buried in pits at a great distance from the camp. Each urinal is fitted with a galvanized iron trough, and the urine is conveyed by means of a short pipe to an open cement drain, which empties itself into a pit filled with broken brick and dressed with sulphate of iron.

Baths and Wash-houses.—There is an ample supply of water for bathing purposes. The bathroom has a cement floor impermeable to fluids. There are two wash-houses for the washing of clothes, provided with tubs, buckets, and tables.

Exercise and Recreation.—Prisoners of war are free to go anywhere within a radius of 3 miles from the camp, and this privilege is freely availed of. In addition, special permits to Kosgoda and other places in the vicinity are granted to a certain number every day. Football, cricket, and quoits are favourite outdoor games. A school was opened early in December, and is very popular.

Clothing.—The men are well provided with clothing.

Climate and Meteorology.—The climate is on the whole good. Meteorological observations were begun on the 29th October. The highest maximum temperature recorded was 88, the lowest 81; the highest minimum was 78, the lowest 66. The total rainfall was 6·73 inches. The rainfall was not estimated till early in December.

MEDICAL.

General Health.—The general health has been very good, and I think that the comparative freedom which the prisoners of war enjoy here in no small measure accounts for this satisfactory state of affairs. The numbers treated at the outdoor dispensary were—

September	173
October	187
November	142
December	151
Total ...	653

making a daily average of 5·83. The diseases treated were of minor importance.

Hospital.—The hospital consists of two wards accommodating ten patients. The number treated in hospital up to the end of the year was 46, the admissions each month being as follows :—

September	9	November	11
October	8	December	18

The largest number in hospital at any one time was five, and the smallest number one. There have been no deaths.

Segregation Camp.—The Ceylon Mounted Infantry hill and the huts standing on it will be used as a segregation camp should any infectious disease break out in the camp.

Staff.—The staff consists, besides myself, of an apothecary, a nurse orderly from among the prisoners of war, and two native attendants.

---

(20) REPORT of the Medical Officer, Prisoners of War Camp at Hambantota, Mr. A. Chinniah.

General.—The Boer camp at Hambantota was opened on the 19th September, 1901, when a batch of prisoners of war was sent from Diyatalawa, numbering 57, of whom 32 were officers and 25 Burghers; since then 2 officers left. The jail is converted into a camp. The situation of the camp is on a high ground and well suited for the purpose.

Water Supply.—The water is supplied by a contractor from wells dug at Indiwewa, about ¾ mile from the camp. The water for drinking is filtered.

Baths.—The prisoners of war freely use sea baths. Two zinc baths are supplied in a bath-room for the officers, and a separate cement bath for the Burghers, also four hand tubs for washing purposes to the officers and two for Burghers.

Drainage.—The arrangement is satisfactory.

Food.—The food is wholesome and nutritious. The daily ration is the same as supplied at Diyatalawa, but mutton is supplied twice a week. The food is cooked by coolies employed for the purpose and supervised by prisoners of war.

Removal of Excreta.—The excreta are removed twice daily and thrown into the sea. The latrines are worked on dry-earth system, Jeye's or Macdougall's fluid being used for each bucket, four buckets for each section, and two urine buckets for officers and one for Burghers.

Dwellings.—Four rooms and nine cells for officers and three big rooms for Burghers are allowed, the space being sufficient for each individual. They are also given two separate dining-rooms, one for each. The rooms are sufficiently ventilated.

Exercise and Recreation.—They are at full liberty to move about from 5 A.M. to 8 P.M. Consequently they have ample exercise, also recreation, such as swimming and walking.

Clothing.—Extra clothes are supplied here freely by Government to those who require the same.

Staff.—I took over charge of this camp on the 15th November, 1901, from Dr. Leembruggen, and I had to dispense.

General Health of the Camp, on the whole, is very satisfactory.

Outdoor Dispensary.—The total number treated was 255, old cases 92 and new cases 163.

STATISTICS.

POST AND TELEGRAPHS.

REPORT OF THE POSTMASTER-GENERAL AND DIRECTOR OF TELEGRAPHS FOR 1901.

Preface.—In the preparation of this report it has appeared advisable, instead of putting the reader to the trouble of turning to appendices for tabulated figures, to present them with the text accompanied by such comments as seem pertinent.

Mails.—The rapid growth of the business done by the Ceylon Post Office is illustrated by the statements which follow. The weight of mails despatched from Ceylon to the United Kingdom for ten years was :—

It will be seen that in ten years the weight of letters and post cards has increased 124 per cent. and the weight of other articles 146 per cent. The table is of further interest as showing how increasing advantage is taken of the French and German steamers.

For the first time it is possible to give an estimate of the number of articles which passed through the post in Ceylon in the year under review. The figures, excluding parcels, which are dealt with below, are :—

Class.	Posted in Ceylon.			Received from other Countries.	Total.
	At Colombo.	At other Stations.	Total.		
Letters prepaid	3,129,826	6,050,796	9,180,622	2,898,354	12,078,976
Letters franked	689,106	1,541,960	2,231,066	—	2,231,066
Post cards	613,762	1,156,906	1,770,668	354,418	2,125,086
Printed matter	2,264,122	913,712	3,177,834	1,370,552	4,548,386
Samples and patterns ...	—	—	—	38,306	38,306
Total ...	6,696,816	9,663,374	16,360,190	4,661,630	21,021,820

Parcels.—The next table shows the parcel business done at the General Post Office for eight years :—

Year.	Inland.						Foreign.			Grand Total.
	Posted at the General Post Office.				Received in Transit to other Offices.	Total.	Despatched.	Received.	Total.	Inland and Foreign.
	Ordinary.	Value-payable.	Service.	Total.						
	No.	No.	No.	No.	No.	No.	No.	No.	No.	No.
1894	55,858	18,348	—	74,206	29,881	104,087	10,426	26,626	37,052	141,139
1895	55,252	20,970	11,377	87,599	31,187	118,786	14,607	36,244	50,851	169,367
1896	52,974	22,842	13,802	89,618	29,415	119,033	11,500	34,239	45,739	164,772
1897	54,717	28,994	14,771	98,482	21,771	120,252	12,645	43,785	56,430	176,683
1898	55,947	30,005	14,296	100,248	22,160	122,408	13,868	45,167	59,035	181,443
1899	58,581	30,898	13,920	103,399	24,112	127,511	16,148	55,498	71,646	199,157
1900	59,827	33,028	16,938	109,793	39,372	149,165	17,288	64,858	82,146	231,311
1901	63,001	39,347	19,533	121,881	47,085	168,966	21,704	71,370	93,074	262,040

Ordinary inland parcels increased only 12 per cent., while value-payable parcels rose by 114 per cent. in the same time. Foreign parcels increased by 150 per cent.

The following is a detailed statement of parcels exchanged with the United Kingdom, India, the British Colonies, and Foreign Countries for ten years :—

[For Statement see next page.]

The fact is noteworthy that the number of value-payable parcels from India to Ceylon has in ten years multiplied 7½ times, while ordinary parcels from India have risen to ten times their number. The fear that the value-payable system between India and Ceylon would interfere with trade has not been justified by the result, and I hope it will not be long before the system is extended to the parcel exchange with the United Kingdom.

The total number of parcels passing between Ceylon and other countries was in 1901 nearly six times the number sent and received ten years before. The total number of parcels which passed through the post was :—

	Ordinary.	Value-payable.	Total.
Inland	225,206	56,114	281,320
Indian	19,725	40,849	60,574
United Kingdom	26,253	—	26,253
Other Countries	6,247	—	6,247
Total ...	277,431	96,963	374,394

On value-payable parcels Rs. 505,554 was collected and remitted to the senders, Rs. 190,040 to senders in Ceylon, and Rs. 315,514 to senders in India. The Customs duty collected on all parcels from abroad amounted to Rs. 64,933·07.

It is convenient here to note the improvements and extensions effected in the Parcel Post Service.

The rates between India and Ceylon were reduced by nearly 50 per cent., and a fair division of the postage between the two administrations was agreed to, resulting in an addition to the Ceylon revenue.

The Peninsular and Oriental Company's service to the Straits Settlements and China was supplemented by using the steamers of the Messageries Maritimes and the Norddeutscher Lloyd Companies, so as to provide a weekly, instead of a fortnightly, service to the Far East.

An overland parcel service *viâ* Italy and France was established, shortening, for the extra charge of 1*s.* or 75 cents a parcel, the time of transit by a week.

An additional service with France and through France to the rest of Europe was arranged by the Messageries Maritimes steamers *viâ* Marseilles, and by the same agency to certain French Colonies.

Services were inaugurated between Ceylon and the Dutch East Indies and with Natal, the latter serving the rest of British South Africa.

At the commencement of the year India announced the establishment of a parcel service with the United States of America, and the Ceylon Post Office took the opportunity of exchanging parcels through India *viâ* Switzerland and France with America.

Direct exchange of insured parcels was arranged with Tasmania and New Zealand, with the Straits Settlements and Shanghai (for German Agencies in China), with Egypt, and with France and Germany. Prior to 1901 parcels could be insured only to India and London and to certain places *viâ* London.

Returned Letter Office.—The work of the Returned Letter Office is shown thus :—

Year.	Total No. of Letters received.	Total No. of Letters returned to Senders.	No. of Letters destroyed.	Property found. Value.
				Rs.
1892 ...	69,654	65,846	3,808	2,656
1893 ...	69,820	65,450	4,370	6,137
1894 ...	74,335	61,149	13,186	3,483
1895 ...	113,758	101,865	11,893	5,624
1896 ...	127,195	110,182	19,769	14,928
1897 ...	134,570	114,930	27,783	8,622
1898 ...	146,806	122,063	24,743	11,213
1899 ...	161,618	129,250	32,368	8,955
1900 ...	170,320	141,399	28,981	12,655
1901 ...	171,027	156,820	14,207	8,557

The number of returned packets naturally advances with the increase of postal matter. It is satisfactory to observe that the proportion of letters destroyed was much lower in 1901 than in any previous years. Articles of value were found in the returned letters to the following amounts :—

	Rs. c.
Money Orders	3,055 65
Postal Orders	98 0
Cheques	5,366 77
Cash	30 35
Stamps	6 38
Total ...	8,557 15

With the exceptions of Rs. 5 cash and Rs. 3·17 in stamps, the whole of this property was returned to the owners. Four sales of unclaimed articles were held in the year, realizing Rs. 255·83.

[For Statement regarding Money Order Business with British Colonies and Egypt see page 5.]

The average advance in the value of the business for ten years is 10 per cent. per annum. The value for 1901 was Rs. 113,500 less than for 1900, a drop of 1 per cent., but 1900 was an abnormal year, and the increase of 1901 over 1899 was very close on 20 per cent. The uncertain factor is the telegraph money order business with India, which is presumably affected by the immigrant labour market.

The commission paid on money orders issued in 1901 amounted to Rs. 62,400, and orders on Government service were issued free, the commission on which amounting to Rs. 9,131 was earned but not paid.

In the course of the year a direct money order exchange was arranged with Natal, serving British South Africa, and largely availed of by the prisoners of war in Ceylon.

A material improvement effected was the issue of money orders on the United Kingdom, the colonies, and foreign countries at every post office in Ceylon, the public being thus saved the trouble of sending a local money order to the General Post Office to purchase a foreign money order.

The number and value of postal orders sold in ten years are shown in the following table :—

Postal Orders sold, and Commission earned, from 1892 to 1901, inclusive.

Year.	Number of Orders at										Total Number of Orders.	Total Value.	Commission.
	50c.	Re. 1	Re.1·50	Rs. 2	Rs.2·50	Rs. 3	Rs. 4	Rs. 5	Rs.7·50	Rs. 10

The average increase of business in this line is very close on 10 per cent. per annum, and the advance is steady.

Post Office Savings Bank.—The progress of the Post Office Savings Bank is satisfactory, the number of accounts existing at the end of each year showing how remarkably steadily the number of depositors is increasing. The advance in ten years is 160 per cent. The increase in population is 18. The number of accounts is the index of the utility of such an institution, and the facts that the amount to the credit of the depositors has risen at the same rate as the number of accounts open, and that the average balance to the credit of a depositor has remained substantially the same, show that the legitimate object of a Post Office Savings Bank, the encouragement of thrift among the poorer classes, is being fulfilled.

The following tables show the business done in the last ten years and a statement of accounts for the year 1901 :—

Post Office Savings Bank Business in the last Ten Years.

Balance held in reserve on December 31, 1901	102,479 74	Balance in hand on December 31, 1900 ...	91,060 78
		Profit for the year 1901	11,418 96
	102,479 74		102,479 74

In my report for the year 1900 I mentioned the issue of improved deposit books in linen covers and with the rules printed in English, Sinhalese, and Tamil. I believe they are appreciated, and I hope that one effect will be greater regularity in sending books to the Head Office to be written up. The importance of this as a protection to depositors from fraud cannot be too often insisted upon.

Telegraphs.—The next two tables show the nett revenue of the Telegraph Branch on account of message traffic and the number and description of messages despatched for three years :—

Revenue of the Telegraph Branch for the Year 1901.

The balance to the credit of Ceylon in 1901 was Rs. 215,056·21, exceeding that of 1900 by Rs. 17,120·76. The number of messages of all kinds handed in for transmission shows an increase in the year of 9 per cent. Inland ordinary paid messages increased by over 10 per cent. An unsatisfactory feature is the rapid increase of urgent free State messages. From the Post Office point of view free messages are of course objectionable, but the unnecessary urgent message is an obstruction to public business, and it is undoubted that a large number of State messages are classed urgent unnecessarily. I think that it is not sufficiently understood that all telegraphic messages are urgent, and that a message paid for at urgent rates does not for that reason go at once, but only at the earliest opportunity. A common complaint is that an urgent message was sent at such a time and took so long in transmission; but the time on the paper is not the time of sending, but the time of booking. At an office like Colombo, which governs the traffic, the classing of a message urgent may be of benefit, but at smaller stations, which can only be worked at intervals, there is not much to be gained.

Telephones.—At the end of 1901 the re-construction of the Telephone System on the metallic circuit was not yet complete, unforeseen difficulties, especially in getting out of the Colombo Fort, having delayed the work. Eleven miles of posts, carrying 216 miles of wire, had been erected, and there remained to be erected, according to the original route estimated for, 1¼ mile of posts and 71 miles of wire. These figures, however, are somewhat under the mark in consequence of unavoidable deviations.

In the report of the Superintendent of Telegraphs, which is presented with this report, full particulars will be found as regards the Telegraph and Telephone Branch.

Revenue and Expenditure.—To sum up the financial result of the year's work, three statements are here presented showing the cash revenue of the Department in 1901, a comparative statement of cash revenue for ten years, and of expenditure for the same period :—

Revenue of the Post and Telegraph Department for 1901.

1898	228,883 31	147,886 35	555,606 47	932,376 13
1899	252.710 72	152.974 84	558,729 20*	964,414 76
1900	278,284 33	166,462 92	646,676 87*	1.091,424 12
1901	301,994 14	179,061 13	571,620 79*	1,052,676 6

* These figures include special expenditure on Telegraph and Telephone construction.

It will be seen that the receipts in 1901 exceeded the receipts in 1900 by nearly Rs. 34,500, and that the total expenditure in 1901 was Rs. 38,748 less than in 1900, but eliminating expenditure on telegraph and telephone construction the figures are as follows :—

	1900. Rs.	1901. Rs.
Revenue	1,005,005 ...	1,039,487
Expenditure	974 392 ...	1,034,733
Excess Revenue ...	30,613	4,754

The incremental system of salaries continued to cause a steady growth of expenditure, while the expansion of postal work in all directions necessitated increased use of stores.

The increase of revenue was normal under all heads, except in Commission on Money Orders, the decrease in which was chiefly due to a marked fall in the number and value of telegraphic orders to India.

The figures shown above do not fairly represent the financial position of the Post Office. I hoped to be able in this report to give a fairly accurate commercial balance sheet, but with the staff at my disposal it has been found impossible. The postage on official correspondence is moderately estimated as worth Rs. 150,000, and the commission on Service money orders was Rs. 9,000, the charges on inland State telegrams may safely be put down as not less than Rs. 60,000, and to this would be added the cost of construction and maintenance of official telephones. On the other side would be placed the salary of the Postmaster-General and a fair amount for construction and maintenance of public buildings occupied by the Department. Until this is regularly worked out no approximately fair statement can be presented.

Miscellaneous.—The following events and incidents of the year 1901 are of more or less interest :—

During the Royal visit in April last the Department was seriously taxed with additional postal and telegraph work, and it is gratifying to note that, notwithstanding the abnormal pressure, the staff, both in Colombo and Kandy, was able to satisfactorily cope with it.

Two post offices and nineteen receiving offices were added, and telegraph business was added at Vavuniya and Mullaittivu.

The mail coach service between Kalutara and Neboda had to be discontinued owing to the failure of the contractor.

A coach service was established between Talawakele and Agrapatana.

The steamboat service between Batticaloa and Kalmunai failed and a runner service was substituted.

In order to avoid mistakes in sorting, the names of the post offices at Muppana and Ragala were altered to Monaragala and Halgran-oya. Nainamadama was changed to Wennappuwa and Morawaka to Deniyaya.

Complaint was made of the non-delivery of a letter containing a cheque said to have been addressed No. 849, Eastbourne, Colpetty. The word "Colpetty" was not written ; the letter went to England, and was returned as undeliverable. Not only do people omit essential parts of the address, but they sometimes forget to write anything on the envelope !

Certain post cards with prints of naked native women were stopped in the post by my order, not because of their indecency, but because bearing the description "Sinhalese women" under the picture they were held to be libellous.

Improved locks for private letter bags were obtained from England, so as to provide merchants in Colombo with bags which cannot be opened except by the owner and the post office.

On the representation of the Planters' Association and the Chamber of Commerce an order was made to admit the use of private envelopes for district letters, the only conditions being that the covers should be green and that the words "District Letter" should be printed on them. Advantage does not appear to have been taken of this concession.

To accelerate the delivery of telegrams two bicycles were purchased and arrangements made to send messengers by tram car.

British penny stamps were supplied to certain offices in October, 1901, for sale to the public at 7 cents each.

Arrangements were made for the delivery in London and the United Kingdom generally by special messenger of every class of postal packet in consideration of a small additional charge.

The new system of sorting, referred to in my report for 1900, was not fully introduced until the beginning of 1902.

The following changes took place in the staff :—Mr. A. R. Slater, C.C.S., was transferred to the Secretariat, and was succeeded by Mr. T. Harward as Second Assistant Postmaster-General. The public is largely indebted to Mr. Slater for many improvements in the postal service with other countries. Mr. H. J. Lovett arrived from England and assumed duties as Assistant Accountant on the 4th June, 1901.

Six officers died, two retired, eight resigned, and six were dismissed.

I take this opportunity of publicly acknowledging the debt which I owe to the staff and other officers of the Ceylon Post and Telegraph Department for the manner in which they have continued to meet and surmount the difficulties of rapidly increasing work, and for the loyalty with which they have sacrificed recreation and leisure in the endeavour to serve the public with efficiency.

H. L. MOYSEY,
Postmaster-General and Director of Telegraphs.

Colombo, June 18, 1902.

REPORT OF THE SUPERINTENDENT OF TELEGRAPHS FOR 1901.

POST OFFICE TELEGRAPHS.

OWING to no report on the working of the Telegraph and Telephone Branches of the Department having been written in 1900 for reasons explained at the end of this report, I propose to some extent to include that year's work in this.

2. Owing to the increase of work of recent years the pressure has become so great that I have not been able to devote as much time to the framing of this report as I should have liked, or is warranted by the large recent and prospective developments.

Telegraph Check Office.

3. This has been placed under the Accountant's Branch. As stated in my report for 1899, the supervision exercised by me over the Check Office was very small owing to the pressing nature of my other duties, and the handing over makes practically no difference to the work of my office. I have no doubt that the Accountant will endorse the remarks in my last report on the shorthanded state of the office. I think it would be a more satisfactory arrangement if an Assistant Superintendent were appointed to take charge of the Colombo Telegraph Office, the general traffic arrangements, and the Check Office.

Reduction of Charges to Europe.

4. These have long been agitated for, and there seems every probability of their being granted by the Cable Companies concerned early in 1902.* The present arrangements for working Madras will permit of a slightly augmented traffic, but if the increase is great, either an additional wire must be put up, or a speedier system of working must be adopted.

Royal Visit.

5. During the visit of the Duke and Duchess of York there was a heavy increase of work entailing special arrangements. The working hours of several of the smaller offices had to be reduced, and some of their signallers taken away to provide the additional men required at Colombo and Kandy. Wheatstone automatic working was established for the first time in Ceylon, with instruments kindly lent by the Technical College, for the transmission of the press messages from Kandy to Colombo, when the traffic was too heavy for duplex working.

The work of the Kandy Office was ten times as great as the average, and that of the Colombo Office was also increased, but not to the same extent, as, owing to there being a public holiday during the Royal visit, the number of business telegrams was much reduced. Much heavier traffic had been expected and arranged for. The special technical arrangements were made under the personal supervision of the Assistant Superintendent of Telegraphs. I believe that the arrangements made gave general satisfaction to the Press.

The additional work thrown on the staff generally, at a time when every one else was having a holiday, was cheerfully borne.

Statistics of Traffic and Revenue and Expenditure.

6. These will be furnished by the Accountant's Branch, so I will not do more than say here that the steady increase in traffic and revenue that has been going on for some years now has been maintained, both as regards the inland and the foreign telegrams.

I regret to notice, however, that there has been a great increase in the number of free State telegrams classed urgent, and suggest that Heads of Departments should be asked to warn their subordinates that telegrams are only to be classed urgent when the slight difference in the time taken in transit is a matter of real importance.

The classing of the majority of these telegrams as urgent is probably due to the fact that it is not realized that it causes considerable delay to the ordinary traffic, the senders merely thinking, if indeed they think about the matter at all, that it costs nothing in any case, and may cause the telegram to go through a little sooner.

The expenditure on maintenance owing to the rapid deterioration of the older lines and the increase in mileage from the construction of extensions has also considerably increased, as was only to be expected.

Boer Camps for Prisoners of War.

7. *Ragama.*—As is well known, a special electrical alarm, devised and patented by the Assistant Superintendent of Telegraphs, was fitted up round the Ragama Camp for the Boer prisoners of war in 1900. Owing to the netting, through which the alarm wires are run, becoming rotten, practically the whole of the arrangement was renewed and extended when the Camp was enlarged in 1901. The fact that not a single escape has been made from inside the netting at Ragama proves sufficiently, without further comment, the efficacy of the arrangement devised by Mr. Macnamara.

A telegraph office was opened at Ragama for the convenience of the officials connected with the camp.

Diyatalawa.—A telegraph office was opened at Diyatalawa in connection with the camp there, and telephone communication established between the camp and the railway station, and also between the offices and quarters of the principal officials in 1900.

Urugasmanhandiya.—A temporary telegraph office was opened here in connection with the Volunteer Camp, the arrangements being made by the Technical College Volunteers; but on it being decided to establish a camp at Urugasmanhandiya for prisoners of war on parole, orders were given that the office and line should be taken over by the Telegraph Department, and the line was reconstructed on a more permanent basis in 1901.

* The reduction has now taken place, the rates being lowered from Rs. 3·12 to Re. 1·95.

Cables.

8. The cables between Ceylon and India worked satisfactorily during the past two years. The cable across the Jaffna lake, however, became faulty on the 16th May, 1901, and arrangements could not be made to repair it until the end of July, when the repairs were executed by Inspector R. H. Thwaites under my supervision, the fault being localized to within a few yards of the Kalmunai cable house, and a short length of new cable substituted. The cable then tested and worked perfectly. The actual cause of the fault, a varying one, was not discovered.

On the 28th September this cable again gave trouble, and was repaired on the 15th October by Mr. Thwaites, who found a fault caused by the cable guards and insulation being pierced either maliciously or by a fisherman spearing fish in the vicinity of the cable. I am inclined to believe the former. The cable, however, did not work well after this fault had been removed, and on a further examination it was found that the guttapercha core near the Ariale cable house had deteriorated. This portion was cut out on the 24th November, and since then the cable has worked well.

During the examination of the cable for these faults it was found that the iron guard wires had in several places become completely rusted for short lengths near the middle of the channel, owing probably to the presence of sulphur or other corrosive springs, as the guards, except in that locality, were perfectly good. The worst parts of these guards were replaced at once, and the rest were left to be done this year, owing to bad weather and the pressure of other work. As Mr. Thwaites had had no previous experience of cable work, the success of the repairs executed by him are most creditable.

During the period that the cable was interrupted telegrams were forwarded to Jaffna by the new line from Anuradhapura to Jaffna.

The cable having once given way, it is probable that other faults will develop before long; and in view of this fact, and the expense of the repairs of the wire from Kalmunai to Pooneryn, which is much exposed to the sea breezes, I have recommended that the line should be diverted and taken from Pooneryn to Paranthan, and from there to Jaffna, with new wire on the posts along the Jaffna Railway. There can be little doubt that this is the course that would have been adopted in the first instance had there then been a line of posts in existence from Paranthan to Jaffna.

Talaimannar Cable House.

9. A small bungalow, similar to a District Engineer's circuit bungalow, should be built at Talaimannar, adjoining or close to the cable hut, to provide accommodation for the Inspectors repairing the wires, and for use as an office in the event of the cables breaking down and necessitating a resort to vibrator working from the cable huts, as on a previous occasion. At present there is only a makeshift cadjan shed on the sand, which has to be extensively repaired annually.

Military Vibrator Circuits.

10. The military continue, by permission of the Postmaster-General, to utilize the Postal-Telegraph wires between Colombo, Kandy, Trincomalee, and Nuwara Eliya, for sending Service telegrams by means of the vibrator. It has, however, been found necessary, owing to the pressure on our lines, to restrict them to certain hours to enable us to use these instruments ourselves, and on the occasion of the Royal visit the privilege had to be partially withdrawn for a few days, the military operators being borrowed by the Department, and arrangements made to transmit urgent military messages free from our offices.

Extensions.

11. In 1900 very large extensions of the telegraph lines were carried out, in fact only in one previous year has that mileage been exceeded, the total length of wire put up in 1900 being 269 miles, while the mileage erected in 1858, the year of the introduction of the telegraph into Ceylon, was 322.

The extensions in 1900 were largely constructed with a view to improving the existing system by the establishment of alternative routes to reduce the liability of whole districts being cut off from telegraph communication through the breaking of a single wire, and to relieve the pressure on existing circuits. Of these, the Jaffna-Anuradhapura line, put up along the North-Central road, has more than justified its existence, as had it not been for this line the whole of the north of the Island would have been cut off by the failure of the Jaffna lake cable, referred to elsewhere.

The Balangoda-Haldummulla line has also proved most useful as an alternative route for up-country telegrams, when the lines from Colombo to Kandy or beyond were interrupted.

The new Colombo to Polgahawela line has relieved the Trincomalee line of the traffic to Veyangoda, Polgahawela, Kurunegala, and Kegalla, and will enable an office to be opened at Henaratgoda. Other extensions were Wattegama to Madulkele, Vavuniya to Mullaittivu. These were established to extend the benefit of the telegraph to new districts.

The following offices were opened in 1900:—Madulkele, Ramboda, Diyatalawa.

12. 1901 was, like 1898, a year of preparation rather than actual construction, many estimates for lines sanctioned, mostly for the Railway, being prepared and the indents for stores forwarded to the Crown Agents. The only new lines completed during the year were:—

(1) The extension of the Madulkele line on from Wattegama to Kandy, 7½ miles, to take the Wattegama Office off the Trincomalee line and put the Madulkele Office direct on to Kandy, the latter office being in a better position to act as a transit office than Wattegama.

(2) Urugasmanhandiya Boer Camp looped into the Colombo-Galle line, 3½ miles of posts and 7 miles of wire.

(3) The Colombo-Nuwara Eliya direct wire looped into the Kandy Office for testing purposes, 8 miles of wire.

(4) The looping of all passing wires into the Polgahawela and Veyangoda Offices for testing purposes for the localization of faults.

(5) A metallic circuit for the Tyer's tablet apparatus between Maradana and Mount Lavinia, 16 miles of wire. Total 3½ miles of posts and 41 miles of wire.

The following new offices were opened in 1901:—Ragama, Mullaittivu, Vavuniya, Urugasmanhandiya Camp.

The works now in hand or already sanctioned for 1902 and subsequent years are :—

Kandy to Deltota
Kandy to Teldeniya } now completed.
Nuwara Eliya to Pussellawa
Kalutara to Neboda.
Colombo to Avisawella, 2 wires (Railway).
Avisawella to Yatiyantota, 1 wire (Railway).
Colombo to Kankesanturai, 1 wire (Railway).
Nanu-oya to Ragala, 1 wire (Railway).
Colombo to Galle, 1 wire (Railway).
Mount Lavinia to Panadure (Railway).
Colombo to Kelaniya (Railway).

The two latter for Tyer's tablet apparatus.

The following reconstructions will also be taken in hand :—Jaffna to Kankesanturai, shifting Postal wire on to the Railway posts ; Colombo to Avisawella, shifting Postal wire on to the Railway posts.

In addition to these, the present Colombo-Nuwara Eliya and Colombo-Kandy circuits will be converted from simplex to duplex working, and will also be fitted with Wheatstone automatic instruments for dealing with special pressure due to interruptions of the circuits or other causes.

The following offices also are to be opened :—Deltota and Teldeniya (now open), Henaratgoda, Neboda, and thirty-one for the Railway Department.

The fact that on the completion of the Railway from Kurunegala to Anuradhapura a wire should be run from Polgahawela to Anuradhapura along the Railway posts to take the foreign telegrams should not be lost sight of. This wire would reduce the liability of the Madras circuit being interrupted considerably, and the existing wire, which runs *viâ* Kandy and Matale, could then be used for the local traffic ; by the erection of an additional wire from Colombo to Polgahawela, this arrangement would enable Jaffna to be given a line with only one intermediate office on it. At present there are many intermediate offices, and Jaffna telegrams are much delayed in consequence.

A start was made on the erection of the Deltota and Teldeniya lines, but these and the Nuwara Eliya-Pussellawa line, which it was hoped would have been completed before the end of the year, were delayed by the stores not being received until December.

Additional Lines required.

13. The following lines are still required as alternative routes in times of interruption or pressure of work :—

(1) Matara to Rakwana, or Hambantota to Madampe and Ratnapura, or Hambantota to Koslanda as alternative route for Galle and south coast telegrams. The frequent interruption of the lines between Colombo and Galle by falling trees or branches, especially during the south-west monsoon, makes it essential for the efficiency of the system that there should be an alternative route. The suggested Matara-Rakwana line would enable offices to be opened at Akuressa, Morawaka, and Deniyaya, which have, I believe, been asked for several times.

(2) Trincomalee to Batticaloa, extension of present line from Batticaloa to Kalkuda. The importance of this line from an Imperial point of view is great. Trincomalee, the headquarters of the East Indian Squadron, is now connected telegraphically by a single wire running through jungle for a distance of 65 miles, interruptions of which lasting from two to three days are by no means unknown. I have been over most of the country through which this line would run, and so far as I could judge there are no insuperable difficulties, but the country should be surveyed in the wet season before the line is put up. The line would have to be taken for about 16 miles along the Dambulla road, and from there cut across country to Muttur or Kinavetti, in order to avoid the inlets of the sea and exposure to sea breezes as much as possible. I have not seen that section, but am told there would be no special difficulties to be overcome. The cost of maintenance of this line will not be great, as it will for nearly the whole length be well protected from the corrosive effects of the sea breezes. This line, in addition to its value for strategic purposes, would act as an alternative route for either Batticaloa or Trincomalee ordinary messages, should the direct lines to one or other of these offices be interrupted, and would also take the direct traffic between the two offices.

With the exception of these two lines, and that from Kurunegala to Anuradhapura, all the special additional wires for which I asked when I took up duties in 1899 have now been constructed, viz. :—Colombo to Polgahawela, Balangoda to Haldummulla, Anuradhapura to Jaffna. The line from Kurunegala to Anuradhapura should follow in the natural course of events after the completion of the Railway.

Store Godown.

14. The want of a good store godown and pole yard is much felt. At present we have only a small room in the basement of the General Post Office, and the Controller of Government Stores is unable to store more than very small stocks of materials for us, consequently the work of the Department has to be carried on in a hand-to-mouth fashion, and only stores for the immediate known wants can be kept in hand, no allowance being made for emergencies, such as big breakdowns or short lengths of new line urgently required. A large galvanized iron godown with a walled yard and sheds for posts round the sides of the yard might easily, I think, be arranged for in the ground now known as the Beira Stores, and a railway siding could be run in there without difficulty.

Maintenance of Lines.

15. In 1900, owing to the time of the subordinate staff being so fully taken up on new work, the maintenance of the existing lines naturally suffered, and it was found impossible for the annual repairs of some sections to be carried out. This may to some extent account for the increase in the number of interruptions in that year and 1901.

In 1901 all existing lines were gone over by repairing parties under Inspectors or Sub-Inspectors, and the necessary repairs and jungle cutting effected.

The maintenance of the lines will never be really efficient until the maintenance and construction subordinate staffs are kept distinct, and the Island divided up into districts under Assistant or Sub-Inspectors for maintenance purposes. These officers would, I believe, by their thorough knowledge of the actual wants of their sections (obtained by frequent inspections) and by the fact that they would be able to see that the office linemen did their work thoroughly, save the cost of the greater part of their salaries by diminishing the waste in material, and reducing the amount of labour required for repairs.

At present all that can be arranged for is that the lines should be gone over once a year by a working party under an Inspector or Sub-Inspector; this makes it difficult for the latter to judge what posts and wire should or should not be renewed, and they often err on one side or the other, the conditions varying greatly even in localities close together, especially on the coast lines.

During 1901 the line from Valluvettitturai to Kankesanturai, which was originally constructed on palmirah rafters for posts and with thin wire, required reconstruction, as it was tottering, and the work was commenced. The Kankesanturai-Jaffna section, which is in the same condition, will be reconstructed on the new iron posts along the railway this year.

The wooden posts from Peradeniya to Gampola were found to be rotting fast, and the process of replacing them by iron ones was commenced from the Peradeniya end.

Much of the wire up-country, which has been in use for many years, is beginning to show signs of rusting and splitting, and should be carefully watched.

The thick iron wire near Silavaturai on the Puttalam-Mannar line, put up in 1897 only, is beginning to give way from rust, and I am afraid that the northern portion of that line, where it is exposed to sea breezes, will be a constant source of expense. This line has not been inspected by a supervising officer since August, 1898.

The Colombo-Avisawella line, which has been a constant source of trouble, will be shortly transferred to the iron posts to be put up on the Kelani Valley Railway, and the good posts and wire removed and used for the Neboda extension and for repairs above Avisawella. The posts on the section Avisawella to Rakwana are, I believe, in very bad condition, but I have not seen them personally since June, 1897. I hope to be able to arrange shortly to have the line put in thorough repair; this, owing to its now being an alternative route for up-country and east coast messages, is a matter of some urgency.

Repairs to the west coast lines were much delayed owing to there being insufficient stocks of wire available. I strongly advocate the gradual replacing of all iron wire by copper or phosphor bronze on these lines; in the long run it will, in spite of occasional thefts, prove not only cheaper, but less liable to interruption. A special vote for this purpose will be utilized this year for completing the replacement on the Mount Lavinia-Kalutara South section.

The number of posts per mile beyond Kalutara, at present only sixteen, should also be increased as soon as funds are available, in order to reduce the number of interruptions by contacts between the wires.

16. Interruptions by contacts on the lines to Kandy are frequent, and the question as to whether the number of posts per mile on this section should not be increased must be seriously considered before any more additional wires are put up. Part of the section from the General Post Office to Maradana Junction having to be realigned last year, the opportunity was taken to replace the existing iron wire, much of which was rusty, by phosphor bronze wire.

The posts between Pallai and Jaffna on the Anuradhapura-Jaffna line were shifted from the road to the Railway line in preparation for carrying the Railway wire.

Linemen.

17. One of those things that militates against the efficiency of the Telegraph System is the low scale of pay allowed for the linemen. These men, who are supposed to be skilled workmen, draw little or nothing more than the ordinary cooly, their wages varying from Rs. 14 to Rs. 20 per month, the average being about Rs. 16, while a cooly gets 50 cents a day. For this the men have to be out in all weathers, in fact, owing to the lines being more subject to damage in rough than in fine weather, they are more often out in the wet than not, and when attached to working parties on repairs or construction, they constantly have to sleep on the ground under trees in malarial districts; consequently it will readily be understood that it is seldom that any but indifferent workers can be got to take up such appointments, and instead of being able to pick and choose, we have to take the first man that offers, without making too particular inquiry into his antecedents. Nearly all the best men I have are old stagers, taken on at a time when the relative value of a lineman's and a cooly's pay was very different to what it is now.

The Military and Electric Light Companies pay their linemen far higher wages than we do, and in Madras the average pay of a telegraph lineman is Rs. 12, while that of a cooly is Rs. 5 only. Further, no accommodation is provided for the men even at offices where they are permanently stationed; the Public Works Department have "lines" for their coolies all along the roads.

Death of a Lineman by Drowning.

The lineman stationed at Hatton when repairing a break in the wire, where it spans the river near the Norwood Office, was swept off his feet and drowned while trying to cross the river, which was in flood at the time. Though he had given notice to the registrar of his intended marriage, he was not legally married at the time, consequently nothing could be done for his wife and child. It seemed a hard case, and I hoped that arrangements might be made to give the woman a gratuity from the Departmental Benevolent Fund, but I was told that nothing could be done for her.

Interruptions of the Post Office Telegraphs.

18. In the records of interruptions kept during the last two years, all cases of imperfect work that have been reported to, or noticed at, the Head Office have been included, and the return is more complete than former ones, in which only actual interruptions were noted, consequently the increase in number is more apparent than real. But I am afraid that there can be little doubt that there has been some increase. This increase has taken place principally on the lines between Colombo and Polgahawela, Colombo and Panadure, Matale and Dambulla, and Anuradhapura and Trincomalee.

These were to some extent due to the working parties renewing the wires in the neighbourhood of Colombo; there were also several faults caused maliciously in that neighbourhood; it was not discovered who had caused the latter.

The figures for the last seven years are as follows:—

Year.	Number of Interruptions.	Aggregate Duration. Hours.	Average Duration. H. M.	Mileage of Wire.	Average Time of Interruptions per Mile of Wire. H. M.
1895*	226	2,124	9.20	1,344	1. 6
1896	206	2,162	10.30	1,493	1.45
1897	136	1,590	11 34	1,592	1. 0
1898	146	1,747	11.58	1,653	1. 5
1899	218	1,666	7.38	1,683	0.59
1900	321	3,388	10.33	2,071	1.38
1901	510	4,286	8.24	2,091	2. 3

* For ten months only, 1st March to 31st December.

Though the number and duration of the interruptions have increased, the time during which offices have been entirely cut off from telegraphic communication has been much reduced, owing to many of the offices now being connected up by alternative routes, by which telegrams are forwarded when the ordinary wire fails.

The most notable interruption in 1900 occurred at Mirigama on the 19th March at 7.30 A.M., when a slack wire caught on the smoke stack of an engine and about a quarter of a mile of posts and wires were pulled down and broken. The Assistant Superintendent of Telegraphs and a strong party were quickly on the spot and worked day and night to restore communication, but it was not until 12.30 A.M. on the 21st that complete communication on all lines was restored.

Early in 1901 there was another interruption of all the wires at Mirigama, and it was at first feared that it was due to a similar fault, but was found to be due to a tree falling on and breaking the wires only, and was quickly put right.

Thefts of Wire.

19. During the past year there have been several cases of cutting down and stealing the telegraph and telephone wires, but only two convictions were obtained, both in connection with the telephone wires on Galle Face near the old cemetery. In both these cases the sentences given were light. In one case, that of a boy, six cuts were ordered to be given, and in the second six weeks' imprisonment. If the practice—which apart from the question of theft and the loss to the Department, is most objectionable, owing to its being cause of considerable inconvenience and possible loss to the public—is to be put a stop to, severe measures are necessary.

Some time ago the Military authorities obtained a conviction and sentence of six months' hard labour for the theft of some of their telephone wire; and I believe that they had no thefts for a long time afterwards, though they had been frequent before.

I give below a cutting from a recent number of "The Electrical Review," and while I do not recommend such drastic measures as those adopted by the Negus, I should like to see such punishment inflicted as would have a really deterrent effect:—

"*Abyssinian Telegraphs.*"

"The Paris correspondent of 'The Times' quotes 'The Journal de Djibouti' to the effect "that the Negus has given instructions for the rapid completion of the telegraphic and telephone "lines between the Italian Colony of Eritrea and his capital. The telephone is in great demand "between Addis Abeba and Harar. When first put up the wires were frequently cut by mischief "makers, but the Emperor published a proclamation stating that any one who cuts a wire would "have his hand cut off, and that the district where the injury was done would be condemned "to pay a heavy fine."

Office Maintenance.

20. Many of the instruments now in use have seen their best days, and should be gradually replaced by others of newer and better pattern.

I have for some time wished to introduce double current working on our lines, and the instruments are available, but it has been difficult, owing to the short-handed state of the office, to make the necessary changes. I hope, however, to adopt this method for working on the Galle line before the breaking of the south-west monsoon.

The introduction of duplex and Wheatstone working to Kandy and Nuwara Eliya is adverted to elsewhere.

The leading in arrangements at most of the offices are capable of considerable improvements. At present it is often difficult for a postmaster to test his covered wires easily, the result being that the tests are often not made promptly, and interruptions are unnecessarily prolonged.

Speed of Transmission.

21. No record was kept of the delay to telegrams in transmission on any one day as has previously been done, but from observations made while on inspection I think that the speed has increased.

Complaints.

22. No record of these has been kept, but the number passing through my hands seems less than formerly.

Number of Signallers.

23. The number of signallers is insufficient, the hours worked at some of the outstation offices being excessive, and telegrams are often delayed, even in the Colombo Head Office, owing to there being no one to attend to the instruments; also when men are absent owing to ill-health, it is seldom that reliefs can be sent.

TELEPHONE BRANCH.

The general increase in the work of the Department has necessitated some of the duties formerly attended to by the supervising staff being thrown on the hands of the subordinates. This is especially the case with the Telephone Branch, in which the Head Inspector now attends to much work that should properly fall to an Assistant Superintendent. Such an arrangement does not conduce to the efficiency of the system, as it involves much of the Head Inspector's time, which should be spent in supervising the work of his Assistants and attending personally to complaints from subscribers, being occupied in office work.

Metallic Circuits.

24. More delay has been experienced in the reconstruction of the Telephone System on a metallic circuit basis than was expected, the difficulty experienced in finding suitable routes for taking the increased number of wires into the Exchange, situated as it is in a very narrow street in the heart of the Fort, being considerable. Some of the routes originally selected proved from unforeseen causes unsuitable, and the alignments eventually chosen involved in some cases sanction for encroachments or obtaining special poles and fittings. The congested state of the roads, too, has made it impossible to arrange for the proper staying of the light tubular poles selected, and in some places they have been discarded in favour of wooden posts.

There have also been constant interruptions of the work to enable new renters to be connected, and these extensions have in some cases necessitated higher posts than were originally contemplated when the scheme for the reconstruction was drawn up.

The outdoor work, however, is now nearly completed, and I hope to have the metallic circuits in use before the end of the year.

Maintenance.

25. The time of the staff has been so much taken up with the metallic circuit reconstruction that not as much attention has been paid to the maintenance of the existing lines as I should have liked; fortunately the majority of these have been recently reconstructed, and so the maintenance question has not been a very urgent one.

Complaints.

26. The number of complaints received in 1901 was 445, as against 426 in 1900, the increase being due to the very unsettled weather in the early part of the year, during which there are usually comparatively few interruptions. In complaints all notifications of interruptions or bad work, whether due to faults on the line caused by falling branches or by operations of workmen, or to inattention on the part of the operators at the Exchange, or to fuses burnt out by lightning, are included.

Instruments.

27. Constant complaints are made that the instruments supplied to renters are old-fashioned and not up to date, but as a matter of fact the instruments supplied are of the same type and by the same makers as the majority of the instruments supplied by the Telephone Exchanges in England.

The renters, as a rule, ascribe all faults on the circuits to the instruments, though by far the greater proportion are either line faults or are due to lightning, and in most cases are unavoidable. The number of visits paid by the Inspectors is very high, and averages three or four to each instrument every month.

Revenue.

28. The revenue derived from the Telephone Branch—

	Rs. c.
In 1898 was	16,635 82
In 1899 was	16,045 7
In 1900 was	16,387 0
In 1901 was	17,909 94

showing a small increase; the drop in 1899 was due to all the Government telephones, some of which had hitherto been paid for, being given free.

Expenditure.

29. Details of this are shown in the attached accounts :—

Accounts for 1900.

Expenditure on Capital Account.

	Rs. c.	Rs. c.
Expenditure up to 31st December, 1899	84,756 29	
Expenditure on extensions in 1900	1,193 12	
	85,949 41	
Deduct amount already written off for depreciation ...	8,364 20	
		77,585 21
Expenditure on metallic circuit account to 31st December, 1899	41,785 17	
Expenditure on metallic circuit account to 31st December, 1900	15,523 25	
		57,308 42
Total ...		134,893 63

Written off for Depreciation.

	Rs. c.
Written off prior to 1900	8,364 20
Written off in 1900, five per cent. on Rs. 77,585·21	3,879 26
Total ...	12,243 46

Balance Sheet for 1900.

	Rs. c.		Rs. c.
Revenue from subscribers ...	16,387 0	Maintenance of lines and instruments ...	8,129 74
Assumed revenue for telephones used by Government Departments ...	7,975 0	Salaries of staff	5,443 81
		Share of general department expenditure, say	3,000 0
		Five per cent. depreciation on capital expended*	3,879 26
			20,452 81
		Balance	3,909 19
Total ...	24,362 0	Total ...	24,362 0

* In calculating the depreciation the expenditure on metallic circuits is not taken into account, as the wires have not yet been brought into use. The gross profit on the year's working is therefore Rs. 3,909·19, being 5·03 per cent. on the capital expenditure to date, less the expenditure on the metallic circuits, which have not yet come into use, or 2·82 per cent. on the total capital expenditure.

Accounts for 1901.

Expenditure on Capital Account.

	Rs. c.	Rs. c.
Expenditure up to 31st December, 1900	85,949 41

Written off in 1901, five per cent. on Rs. 76,577·73	3,828 88
Total ...	16,072 34

Balance Sheet for 1901.

	Rs. c.		Rs. c.
Revenue from subscribers ...	17,909 94	Maintenance of lines and instruments ...	2,759 42
Assumed revenue for telephones used by Government Departments ...	8,325 0	Salaries of staff	5,791 29
		Share of general department expenditure, say	3,000 0
		Five per cent. depreciation on capital expended*	3,828 88
			15,379 59
		Balance	10,855 35
Total ...	26,234 94	Total ...	26,234 94

* In calculating the depreciation the expenditure on metallic circuits is not taken into account, as the wires have not yet been brought into use. The gross profit on the year's working is therefore Rs. 10,855·35, being 14·17 per cent. on the capital expenditure to date, less the expenditure on the metallic circuits, which have not yet come into use, or 7·73 per cent. on the total capital expenditure.

Profits.

30. The large item for maintenance in 1900 reduced the profit on the year's working, which, after allowing for 5 per cent. depreciation on the capital expenditure to date, was only Rs. 3,902·19, against Rs. 9,080·25 in 1899, being 5·03 per cent. on the capital expended to date less that on the metallic circuits not yet brought into use, and 2·82 per cent. on the total capital expenditure.

In 1901 the financial aspect was a more satisfactory one, the gross profit being Rs. 10,855·35, or 14·17 per cent. on capital in use, and 7·73 per cent. on total capital expended, after allowing the usual 5 per cent. for depreciation.

Charges.

31. The greater part of the expenditure on the metallic circuits having now been incurred, it is possible to gauge the financial stability of the Telephone Branch, and from the 7·73 per cent. profit on the total expenditure it may, I think, be considered satisfactory.

RAILWAY TELEGRAPHS.

32. In my report for the year 1899 I said "The existing telegraph system of the Ceylon Government Railway leaves much to be desired." The same may still be said.

33. *Coast Line.*—Something has been done to relieve the pressure on the Coast line by the installation of Tyer's tablet instruments between Colombo and Wellawatta, and an extension of the system to Panadure and Kelaniya has been sanctioned. The through line from Colombo to Galle has also been sanctioned, and I hope to be able to take its construction in hand shortly, most of the stores required having been delivered.

On the completion of these works the telegraph service for the Coast line should be fairly safe against complete breakdown, but the position of the lines, exposed as they are to the effects of salt breezes and falling cocoanut trees and branches, makes it practically impossible to ever establish a really efficient and reliable service. The Tyer's tablet or some other system of block signalling should be extended throughout the lines.

34. *Main Line.*—Nothing has yet been done to improve the telegraph service on the Main line beyond the sanction of the extension of the Tyer's tablet to Kelaniya; a further extension of block signalling should be sanctioned. With regard to the line above Kandy, I do not think I can do better than repeat what I said in 1899, viz. :—

> Above Kandy there is only a single wire to Bandarawela, 93 miles, touching at twenty-one stations, and divided into three sections. This is obviously insufficient for working the portion of the line on which the majority of goods traffic arrangements have to be made.
>
> The District Superintendent at Nawalapitiya should clearly have through communication with the head offices at Colombo and also with the larger stations higher up. To effect this the Colombo-Kandy direct line should be carried on to Nawalapitiya, and another line run from Nawalapitiya to Nanu-oya touching at Hatton and Talawakele.

35. *Railway Signallers.*—As I said in my last report (1899), the number of railway signallers is insufficient, and they have far too many things to attend to, viz., the telegraph instruments, telephones, and tablet apparatus, sell tickets, &c. The work should be divided up, except at small stations. At present it is impossible for these officers to attend to all their duties efficiently.

36. *Extensions.*—Owing to the new railway lines now in course of construction, the mileage of railway telegraph wire and the number of offices will shortly be nearly doubled, and I consider that it would be absolutely dangerous to attempt to carry on the work without a large increase to my staff. I deal with this matter in greater detail elsewhere in my report.

In connection with these extensions, I recommended the erection of two wires in each case, viz., a through wire touching at all important stations and an omnibus circuit touching at every office, as I thought it would be best to ensure a more efficient service than is provided on the existing lines, but the Railway Department decided that the traffic would not warrant the expense of a second wire, except on the Kelani Valley Railway.

In addition to the posts and wires to be put up along the new railway lines, an extra wire will be run on the existing posts from Colombo to Polgahawela to carry the telegrams between the stations on the Northern Railway and Colombo.

37. *Inspecting Signaller for Railway Telegraph Offices.*—My opinion as to the necessity of this officer is unchanged. All railway telegraph offices should be constantly inspected and the causes of interruptions investigated on the spot and remedied where possible by a competent officer. This I am often unable at present to arrange for.

38. *Interruptions.*—In the record kept this year the interruptions of the railway telephone circuits and the signal indicator wires have been included, as have all cases in which the lines were reported as working imperfectly only, consequently the increase in the number and the duration of the interruptions is more apparent than real.

In a large number of interruptions the cause has not been traced, and many might have been avoided had the strength of my staff enabled me to arrange for more frequent inspections of the lines and offices.

Below will be found in tabular form the record of interruptions of the Railway Telegraph System for the last seven years, previous to which no record appears to have been kept :—

Year.	Total Number of Interruptions.	Aggregate Duration.	Average Duration.	Mileage of Wire.	Average Duration per Mile of Wire.
		Hours.	H. M.		H. M.
1895*	120	819	6·50	349	2· 3
1896	162	1,385	6·30	376	3· 7
1897	132	1,173	8·52	376	3·12
1898	120	1,205	10· 2	376	3· 2
1899	115	805	7· 0	376	2·14
1900	162	1,761	10·52	376	4·41
1901	259	2,498	9·38	400†	6·14

* For ten months only, 1st March to 31st December.

† Approximate only, the actual figures for the inclusion of the telephone and other subsidiary wires not being at hand when the report was written.

Railway Telephones.

39. The present arrangements of the Railway Telephone Service is not satisfactory, and I have recommended that an exchange should be established in the railway yard, to which all the railway offices should be connected. This work if sanctioned will, however, have to await the completion of the metallic circuit work for the Post Office Exchange, as I have at present as much on my hands as I can manage with the staff at my disposal.

Tyer's Tablet Apparatus for Block Working between Colombo and Mount Lavinia.

40. This was not brought into use for the actual working of the trains during the year, but was used as a bell circuit for giving train on line and line clear signals, and for giving the station masters practice in the use of the instruments for block working.

There was much delay in putting the apparatus up, owing, in the first place, to a long correspondence on the suitability of the instruments, and afterwards to the fact that no Inspectors were available for the fixing and maintenance of the system.

Distant Signal Repeaters.

41. These were fitted up at Talawakele station. The pattern adopted by the Railway Department might, I think, be improved on.

Personal.

42. In May, 1900, I was obliged to go home on sick leave, but before I left I was able to see that most of the stores for the extensions sanctioned had been forwarded to their destination and the work put well in hand.

During my absence the works already sanctioned, with the addition of several others, mostly connected with the Boer prisoners' camps, were ably carried out single-handed by the Assistant Superintendent of Telegraphs, who acted for me while I was on leave. I returned at the beginning of February, 1901, and soon afterwards much of our time was taken up by the arrangements to be made in connection with the Royal visit ; as soon as this was over the Assistant Superintendent went to India in connection with electric alarms for the Boer prisoners' camp there, and almost immediately after his return went on leave on account of urgent private affairs and to recruit his health, which had suffered from the strain of the long spell of double work in 1900. He returned in September, and during the interval I was working without an Assistant.

I wish to record my appreciation of the way in which Mr. J. Robertson, the Telegraph Master, Colombo, has seconded my efforts to maintain and improve the efficiency of the Telegraph Department, especially during the period of the Assistant Superintendent's absence on leave, and more particularly during the time I was away attending to the repairs of the cable and inspecting the lines and offices in the north of the Island, when much work usually attended to by myself or the Assistant Superintendent was satisfactorily dealt with by him.

The work of Mr. R. H. Thwaites and Mr. H. C. Assauw, Telegraph and Telephone Inspectors, is deserving of commendation.

Report for 1900.

43. The annual report of the Telegraph Branch for the year 1900 was to have been written by Mr. Macnamara, who had been acting as Superintendent of Telegraphs for the greater part of the year ; owing, however, to the heavy additional work involved by the Royal visit, he was unable to complete it before going home on leave.

D. MONTAGU, A.M.I.C.E.,
Superintendent of Telegraphs and
Electrician in Ceylon.

Colombo, June 10, 1902.

POST AND TELEGRAPH LIBRARY AND RECREATION CLUB REPORT FOR THE YEAR ENDED 31ST DECEMBER, 1901.

YOUR Committee beg to submit their Report for 1901.

Members.—The number of members on 31st December was, Colombo 185 and outstations 147, total 332. This is an increase on the previous year of 41 members.

Committee Meetings.—Eleven Committee Meetings were held, with an average attendance of 8 members.

Subscriptions.—The total amount collected as subscriptions was Rs. 1,695·74, against Rs. 1,527·62 for the previous year.

Government Donation.—The Committee gratefully acknowledge the continuation of the Government grant of Rs. 400.

Papers.—The following papers, magazines, and journals are subscribed for :—

Local : Observer, Times, Independent, Standard, and Catholic Messenger.

Overland : Black and White, Sketch, Illustrated London News, Penny Illustrated Paper, Graphic, Ally Sloper, Scraps, Tit-Bits, Answers, Moonshine, Punch, Overland Mail, Pick-me-up, Pearson's Weekly, Crampton's Magazine, Windsor Magazine, Strand Magazine, Pearson's Magazine, English Illustrated Magazine, Review of Reviews, Woman at Home, Boy's Own Paper, Idler, Leisure Hour, London Reader, Family Herald, London Journal, Myra's Journal, Weldon's Journal, Young Ladies' Journal, and Chambers' Journal.

Our thanks are due to the editors of the Observer, Times, Independent, Standard, Catholic Messenger, Daily News, and Dinakaraprakasa for continuing to supply us with copies of their papers free of charge.

Books.—A sum of Rs. 660·50 was paid during the year on account of new books. This includes a balance of Rs. 160 paid for the Encyclopœdia Britannica, which was purchased in 1900.

Lawn Tennis.—Considerable interest is again being taken in this game. Prizes were during the year offered by Messrs. Macready and Fox.

At Home.—An "At Home" was held on the 28th December, and a Christmas tree was provided for the amusement of the children invited.

Librarian.—The former Librarian having resigned on 31st May, Mr. G. Fernando was appointed in his place from 1st June.

Finances.—A sum of Rs. 100 was, as usual, transferred to the reserve fund. The balance to credit on 31st December was Rs. 393·35.

Receipts and Expenditure.—The Treasurer submits his balance sheet duly audited and also his estimates for the current year.

Resignation.—Your Committee now beg to tender their resignation, and it is for you to elect new office-bearers.

By order of the Committee,

Post and Telegraph Library,
General Post Office, Colombo.

J. ROBERTSON,
Honorary Secretary.

RAILWAYS.

REPORT OF THE GENERAL MANAGER FOR 1901.

I HAVE the honour to submit my report on the working of the Ceylon Government Railways for the year 1901.

As I only arrived in the Island on 4th November to take up my duties as General Manager, I am unable to say much from personal experience with regard to the administration of the Railway during the greater part of the year, and therefore my report is chiefly founded on statistics supplied to me by the Accountant of the Railway.

Mr. W. T. Pearce, the late General Manager, left the Island on 27th May, 1901, and between the date of his departure and my arrival the office of General Manager was temporarily filled by Mr. A. G. Perman, the Traffic Superintendent.

As appendices to this report are the Departmental Reports for the year furnished me by the Engineer of Ways and Works, the Locomotive Engineer, the Traffic Superintendent, and the Accountant.

CAPITAL ACCOUNT.

The original capital cost of open lines is Rs. 53,090,104. The total cost of the Railway, including additions and improvements, up to the 31st December, 1901, has been Rs. 57,970,083, but this does not include the sum of Rs. 2,351,493 spent during the last five years on new works and rolling stock which has been paid out of revenue.

LOAN ACCOUNT.

On the 1st January, 1901, the capital outstanding on loans (sterling debts converted into local currency at the rate of 1s. $4\frac{1}{32}d.$ per rupee) was Rs. 32,229,610, or Rs. 66,150 more than on the 1st January, 1900, due to a slightly lower rate of exchange.

RESULT OF THE YEAR'S WORKING.

	1901. Rs.	1900. Rs.	Increase. 1901. Rs.	Decrease. 1901. Rs.
Gross Receipts ...	7,938,131	8,272,351	—	334,220
Working Expenses ...	4,736,701	4,374,310	362,391	—
Profit ...	3,201,430	3,898,041	—	696,611

I regret to have to report that for the first time since 1883 there is a decrease in the receipts of the Railway, which is fully explained hereafter.

Interest.—The interest paid on loans amounted to Rs. 1,235,178.

Nett Earnings.—After deducting the working expenses and the payment of interest, the nett amount contributed by the Railway to the general revenue of the Colony amounted to Rs. 1,966,252, equivalent to a dividend of 3·39 per cent. on the total capital cost of Rs. 57,970,083.

Percentage of Expenditure to Gross Receipts.

	1901.	1900.	Increase.	Decrease.
Maintenance of Ways and Works. ...	15·7	12·5	3·2	—
Locomotive ...	24·7	21·9	2·8	—
Traffic ...	10·4	9·6	·8	—
General ...	1·8	1·6	·2	—
New Works ...	7·0	7·3	—	·3
Total ...	59·6	52·9	Nett 6·7	—

Maintenance.—During the last two years the outlay on renewal of permanent way has been exceedingly heavy, and may be expected to continue so for another two years. The increase in 1901 over 1900 amounts to Rs. 208,922, chiefly incurred in the renewal of 630 tons of steel rails and over 26,000 sleepers. Fortunately there has been a slight drop in the price of rails, otherwise our expenditure would have been still heavier.

Locomotion.—In the Locomotive Department there has been an increased expenditure of Rs. 153,042, of which Rs. 112,243 was in locomotive power, due partly to an increase of engine and train mileage, but principally to increased cost of fuel and lubrication, and partly to considerably more work having been done in repairing engines during the latter half of the year, after arrival of Mr. H. G. Unsworth, the new Locomotive Engineer.

In carriages and wagons an increase of Rs. 35,948 is due to the standard of efficiency having been revised, and to several alterations to the passenger bogie stock to provide additional second class and improved first class accommodation.

Traffic.—Although the working expenses of this Department show an increase of 8 per cent. of the receipts compared with 1900, it must be remembered that the decrease in the earnings is responsible for nearly half, as it is seldom possible to effect any reduction in the traffic charges when a falling off in the receipts, possibly of a temporary nature, is general throughout the line. On the other hand, additional outlay has been necessary to improve the lighting of the stations on the Sea Coast Line and two or three of the Main Line stations, including Kandy, where the installation of the electric light has added largely to the cost of illumination.

The annual increments to the salaries of the clerical staff and the provision of extra staff at under-manned stations also account for an increase of Rs. 10,222. I anticipate that a further increase in the expenditure of this Department will be necessary very shortly to strengthen the staff, both clerical and uniform, at many of the stations, where the hours of duty have outgrown the capacity of the present staff. At the same time I hope to effect reductions in outlay in other directions, and on the whole the total expenditure will, I trust, not exceed the present cost to any great extent.

General Charges.—The nett increase under this head is Rs. 12,884, of which the Accountant's Branch incurred Rs. 8,016, partly owing to the much-needed appointment of an Assistant Accountant and partly to the usual annual incremental increases of salary.

In the Stores Branch an increased outlay of Rs. 5,297 is to a great extent due to provision being necessary to pay the cost of furniture, stores, &c., which had been taken out of stock to meet the requirements of the management during preceding years without payment.

NEW WORKS.

Under the head of "New Works" expenditure amounting to Rs. 552,305 has been incurred, or Rs. 48,152 less than in the preceding year, the following being the most noteworthy, viz.:—

	Rs.
New bungalows for staff at Bandarawela	11,948
Improvements to Slave Island (estimated total cost Rs. 156,000) ...	17,956
Improved lighting of stations	9,875
Improvements at Gampola station	7,268
Bungalows for staff at Nawalapitiya	29,207
Bungalows for staff at Hatton	15,240
Extension of goods shed at Kurunegala	5,529
Improvements to lavatories at stations	18,838
Repairs to Panadure bridge	15,095
Interlocking points and signals...	17,826
New carriage shop at Colombo (half cost paid out of Railway Extension Funds)	43,280
Provision of a goods shed and increased siding accommodation at Ulapane ...	13,739
Construction (by Postal Department) of a new railway wire from Colombo to Ambalangoda	32,600
Improvements to Moratuwa station	5,577
New machinery	9,584
Additional rolling stock	196,992
Fitting existing stock with vacuum brake	20,060
Tyer's Tablet System	5,600
Improvements to sleeping cars	1,864

MILEAGE.

Length of Line.—No extension has been made during the year, consequently the length of the line remains at 297½ miles.

Traffic Train Mileage.

	1900.	1901.	Increase.	Decrease.
Coast Line ...	469,703 ...	451,353 ...	— ...	18,350
Main Line ...	564,284 ...	558,776 ...	— ...	5,508
Nawalapitiya–Nanuoya Line	166,148 ...	176,937 ...	10,789 ...	—
Nanuoya–Bandarawela Line	58,237 ...	74,865 ...	16,628 ...	—
Matale Line ...	50,594 ...	50,692 ...	98 ...	—
Kurunegala Line ...	19,108 ...	19,486 ...	378 ...	—
Total ...	1,328,074	1,332,109	Nett 4,035	

The decrease on the Coast Line is due to the running of a less number of special goods trains between Colombo and Galle owing to a falling off in the goods traffic. On the Main Line also the decrease in the quantity of goods conveyed necessitated a reduction in the train mileage.

To meet the requirements of the Boer Camp at Diyatalawa, the provision of an extra mixed train each way between Nanu-oya and Bandarawela daily throughout the year (as against only a portion of the preceding year), and the running of extra passenger carriages on the ordinary trains between Nawalapitiya and Bandarawela, made it necessary to work a great many special goods trains to convey the ordinary goods traffic.

Results per Train Mile.

2,022	8,555	6,533	—	Second Class...	9,455	18,667	9,212	—
26,042	24,791	—	1,251	Third Class ...	62,127	60,629	—	1,498
28,603	33,844	Nett 5,241	—		75,951	83,190	Nett 7,239	—

The large increase in the number of second class season ticket-holders is due to the reduction in the rates for ordinary monthly tickets to one-twelfth of the yearly rate from 1st January, 1901. From the same date a specially low rate was granted to Government clerks, and a corresponding reduction in the third class monthly rates was also allowed to Government peons and messengers and children of Government clerks. The decrease in third class tickets is consequent on a large number of season ticket holders, who formerly travelled third class, now travelling second class.

Parcels and other Coaching Traffic.

Private Special Trains	20,878	19,662	—	1,216
	266,960	274,834	Nett 7,874	—

The increase in parcels receipts represents the transport of 20,950 additional parcels, of which 14,000 were despatched from Colombo Terminus alone, the increased despatch from that station being partly due to parcels not now being accepted at Pettah station for transport to Main Line stations. The other principal increases are Maradana Junction 1,338, Fort 1,485, Slave Island 1,605, Moratuwa 2,294, Galle 2,859, and Matara 1,861.

Decreases are shown in the number despatched from Kurunegala, Kandy, Nawalapitiya, and Nanu-oya.

Although the receipts for horses show a decrease of Rs. 1,033, the number conveyed was 63 in excess of previous year, due to a larger number having been transported over shorter distances between up-country stations, probably for Ceylon Mounted Infantry drills, while fewer were carried from Colombo.

Under the head of carriages a decrease has again to be recorded, due doubtless to the more extensive use of bicycles, of which 998 were conveyed in excess of 1900.

Total ...	505,751	4,942,508	520,547	4,731,841	Nett 14,796	—	—	Nett 210,667

On the face of it the above table shows a somewhat extraordinary result, inasmuch as the Railway received Rs. 210,667 less than in 1900. although 14,796 more tons were transported. This result is brought about partly by a large increase in the weight of Railway materials conveyed for open lines, for which no freight is charged, and for extensions for which exceedingly low rates are charged, and partly by a considerably larger quantity of stone having been transported for the Harbour Works over a short distance at an exceedingly low rate. Deducting Railway materials and stone traffic, the nett result shows a decrease in ordinary goods of 13,818 tons and Rs. 218,396.

Tea.—The decrease of 3,879 tons is distributed over nearly the whole of the planting districts, the principal decreases being at Wattegama 569 tons, Kandy and Peradeniya 748 tons, Gampola 470, Nawalapitiya 426, Hatton and Watawala 1,112 tons. Matale shows a decrease of only 76 tons, while Nanu-oya and Bandarawela give increases of 73 and 343 tons respectively.

Rice and Tea Packing.—The decreases under these heads are the natural result of the depression in tea.

Coffee.—Of the decrease of 345 tons, Haputale accounts for 67 tons, Bandarawela 133 tons, and Nanu-oya 85 tons.

Cacao.—The principal increases are Kandy 161 tons, Katugastota, Wattegama, and Matale, 47, 57, and 197 tons, respectively.

Cocoanut Produce.—In copperah there has been an increase of 5,535 tons, while decreases of 50 and 432 tons are shown under cocoanuts and cocoanut oil. In poonac a small increase of 56 tons is recorded.

Fruit, Vegetables, and other 5th Class Goods.—The increase of 1,858 tons under this head may be taken, not only as proof of the more extensive cultivation of native fruits and vegetables, but of greater confidence being placed by villagers and petty traders in the security and expedition of rail transport as a means of conveying their produce to the best markets. The district lying between Alawwa, Kurunegala, and Rambukkana has contributed over 1,200 tons of this additional traffic, while the Kandy-Matale District shows an increase of 331 tons. An increase of 98 tons is also shown at Bandarawela, while small increases are general at roadside stations serving Sinhalese villagers throughout the line.

Plumbago.—The depression in this mining industry, which commenced in 1900, continued throughout last year, the quantity transported by rail in 1901 being nearly 12,000 tons less than in 1899.

Tobacco.—The nett decrease of 126 tons is principally at Colombo (121), while small decreases recorded at Kandy, Watttegama, and Matale are counterbalanced by increases at Galle and Kurunegala.

Timber, including Staves.—The falling off in the timber traffic has been pretty general consequent on the decreases in tea and plumbago. Of the nett decrease of 1,351 tons, more than half was in wrought timber from Colombo. Under the head of unwrought timber, the principal decrease was at Gintota of 358 tons. Small increases are shown at Kurunegala, Rambukkana, and Matale.

Manure.—Of the total quantity of manure carried in 1901, over one-fifth, or 2,782 tons, was conveyed from Colombo Terminus and Wharf to Kelaniya, as compared with 3,116 tons in 1900, so that the actual decrease in the quantity transported to other stations amounts to 2,771 tons. This decrease is notwithstanding a reduction in the rate per ton per mile over the section above Nawalapitiya to the same rate as that charged on the Main Line below Nawalapitiya from 1st January, 1901, and is possibly due to the crusade against the manuring of tea by those who contend that it is one of the causes of over-production and consequent low prices.

General Goods.—The reduction of Rs. 91,919 in the receipts taken in conjunction with a nett decrease in weight of only 293 tons is explained by the fact that the previous year's traffic included all the materials transported from Colombo to Diyatalawa for the construction of the Boer Camp. The decrease in the goods tonnage carried from Colombo and Wharf to Diyatalawa alone amounts to 2,891 tons, and this largely accounts for the reduction of 3,720 tons in other third class traffic and 834 tons in other second class goods. These decreases are, however, nearly counterbalanced by increases in salt 1,121 tons, arrack 346, beer 344, kerosine oil and bulk petroleum 621, and in other sixth class 1,846 tons.

Railway Materials and Stone Traffic.—These two headings account for increases of 14,187 and 14,428 tons respectively, but as already mentioned above they are not profitable freight, the nett increase in receipts contributed by this large increase in tonnage being only Rs. 7,729.

Live Stock.—An increase of Rs. 16,840 is chiefly due to the transport of imported cattle from Colombo to Diyatalawa for the supply of meat to the Boer Camp.

Sectional Results.—The following table gives the results of the working of the several sections of the Railway in 1901 compared with 1900:—

	1900. Rs.	1901. Rs.	Increase. Rs.	Decrease. Rs.
Main Line: Colombo, Kandy, and Nawalapitiya (including Wharf and Mahara Quarry):				
Receipts	4,940,854	4,723,984	—	216,870

Profit	22,584	33,717	11,133	—
Total all lines:				
Receipts	8,272,351	7,938,131	—	334,220
Expenditure	4,374,310	4,736,701	362,391	—
Profit	3,898,041	3,201,430	—	696,611

NOTES ON SECTIONAL RESULTS.

Main Line: Colombo to Kandy and Nawalapitiya.

Receipts.—Passengers show a decrease of Rs. 89,906 and goods Rs. 152,243, while the principal increases are in parcels Rs. 4,263, stone for Harbour Works Rs. 8,963, live stock Rs. 8,895, and miscellaneous Rs. 4,601.

Expenditure.—Under the head of Maintenance, an increase of Rs. 124,465 is chiefly due to extensive relaying of rails and sleepers. In locomotive power also there has been a large increase in expenditure, partly owing to higher cost of fuel and oil and partly to more extensive repairs to engines. The outlay on upkeep of carriages and wagons has also been heavier by Rs. 19,432, and in traffic expenses an increase of about Rs. 15,000 is shown, the causes of which have already been stated in my remarks on the general expenditure. The only decrease is in new works by Rs. 66,968.

Nawalapitiya-Nanuoya Line.

Receipts.—The result of last year's working is a great contrast to the large all round increases reported in 1900. In passengers and goods traffic decreases of Rs. 16,426 and Rs. 33,826 have to be recorded, against which increases to the total of about Rs. 13,000 are shown in parcels, live stock, and miscellaneous.

Expenditure.—Fortunately, however, the working expenses have been considerably reduced, the decrease in maintenance alone being about Rs. 90,000 owing to less relaying having been done last year, and a reduction of Rs. 28,763 is also shown under new works. Small increases have been incurred in running charges in both locomotive and traffic owing to the working of 10,789 additional train miles.

Nanuoya-Bandarawela Section.

Receipts.—The reduction in the receipts for the transport of ordinary traffic, which has been general throughout the Railway System, has been compensated for on this section by the continuance of the Boer Camp at Diyatalawa during the whole of last year. Passenger earnings show an increase Rs. 2,905, parcels Rs. 600, live stock Rs. 3,051, and miscellaneous Rs. 3,959; the only decrease being Rs. 9,731 in goods, due to the large quantity of material conveyed in the preceding year for the construction of the Camp.

Expenditure.—Of the increase of Rs. 29,213, maintenance of permanent way absorbed Rs. 15,605, traffic working about Rs. 4,000, and repairs to carriages and wagons Rs. 2,345. The expenditure under the head of New Works was also heavier by Rs. 7,699, owing to the provision of additional houses for the staff at Diyatalawa and Bandarawela and to the construction of a triangle for the turning of engines at Pattipola.

Matale Line.

Receipts.—Of the decrease of Rs. 3,584, Rs. 2,715 is due to falling off in passengers and Rs. 1,433 to decreases in goods. There were small increases in parcels, horses, carriages, and dogs, live stock, and miscellaneous traffic.

Expenditure.—There was an increase of Rs. 13,253 in maintenance of permanent way and Rs. 14,326 in locomotive power. There was a decrease of Rs. 8,185 in new works.

The train service on this branch is a more liberal one than the earnings warrant, especially on Sundays. Steps are being taken to reduce the number of Sunday trains, and unless the traffic receipts show a marked improvement, I fear there will be no alternative but to curtail the week day service also.

Kurunegala Line.

Receipts.—The traffic returns on this short branch show a better result than on any other section of the line. In passengers there has been an increase of Rs. 4,612, while the falling off in ordinary goods traffic has been considerably less in proportion than on any other parts of the Railway, the decrease in receipts being only Rs. 390, despite a decrease of 5,240 tons in the quantity of Railway material received last year for the Northern Extension. The principal increases were in copperah 3,080 tons and in fruit and vegetables 400 tons, while the largest decreases were 600 tons in plumbago and 356 tons in cocoanuts and cocoanut oil.

Expenditure.—There were decreases of Rs. 8,696 in maintenance of ways and works, Rs. 2,675 in locomotive power, and increases of about Rs. 700 in traffic expenses, Rs. 329 in repairs to carriages and wagons, Rs. 401 in general charges, and Rs. 3,155 in new works on account of extension of the goods shed at Kurunegala.

Coast Line.

Receipts.—A decrease of Rs. 70,877 in ordinary passenger receipts is partly due to trade depression and partly to a large increase in the issue of cheap second class monthly season tickets, although the actual increase in season ticket receipts is only Rs. 6,958. The principal decreases in the number of ordinary passengers in the season ticket zone are Pettah 23,927, Fort 9,553, Lunawa and Moratuwa 7,023, Panadure 4,864, Kalutara North and South 12,901. From other causes (chiefly slackness in the plumbago trade) stations between Kalutara and Galle show a decrease of 86,933 passengers, and on the Matara Branch 25,102 passengers.

From goods traffic the receipts have been lower by Rs. 22,881 than in 1900, the most noteworthy decreases in tonnage being at Kalutara 506, Alutgama 371 tons, Hikkaduwa 506, Dodanduwa 476, Gintota 633, and Galle 2,062. Of these decreases, about 2,500 tons were in plumbago and 1,557 tons in rice from Galle. There was also a large falling off in timber from Gintota. At Moratuwa an increase of 310 tons is probably due to the provision of a goods shed and other facilities for dealing with goods traffic. There has also been an increase in goods forwarded from stations on the Matara Line, to which Matara alone contributed 1,242 tons.

Expenditure.—Extensive renewals of rails and sleepers have necessitated an increased expenditure of Rs. 154,294 in maintenance, and the outlay under the head of New Works and additional rolling stock has also been abnormally heavy (Rs. 44,910 in excess of previous year), due to the provision of additional passenger carriages to relieve the overcrowding of suburban trains, an extra telegraph line to facilitate the working of the traffic, interlocking of points and signals to secure greater safety in working, and additional and improved lavatory accommodation at the principal stations, &c. Rs. 15,000 had also to be spent in repairs to Panadure bridge.

May 21, 1902.

G. P. GREENE,
General Manager.

CASUALTIES.

Loss of life or serious injury resulted to the following natives when trespassing on the Railway line in defiance of the special notices exhibited and in spite of the efforts of the patrols and others of the Railway Staff to prevent trespassing and to prosecute trespassers :—

January 14.—A boy between Maradana and Pettah.
January 18.—A woman near Henaratgoda.
January 29.—A man between Ragama and Henaratgoda.
February 5.—A boy between Ambalangoda and Hikkaduwa.
February 19.—A man between Maradana Junction and Kelaniya.
February 27.—A man near Ragama.
March 11.—A boy between Nawalapitiya and Galboda.
April 12.—A third class passenger between Kotagala and Talawakele.
April 16.—A man near Kelaniya bridge.
April 30.—A man in Rambukkana yard.
May 7.—A man between Rambukkana and Polgahawela
May 25.—A man between Maggona and Beruwala.
June 21.—A man near Dehiwala.
July 5.—A man near Maradana Junction.
August 10.—A man near Pettah.
August 12.—A man near Henaratgoda.
August 21.—A man near Maradana Junction.
September 2.—A boy between Mirigama and Ambepussa.
October 30.—A man between Kandy and Peradeniya New.
November 9.—A boy between Hikkaduwa and Ambalangoda.
November 16.—A man near Rambukkana.

Accidents to Members of the Railway Staff:

March 5.—Goods shed cooly at Wharf burnt by the bursting of a drum of sulphuric acid.
March 8.—Gateman of Nanu-oya road gate, near Peradeniya Junction, run over and killed.
June 28.—A fireman injured in Galle yard by coming in contact with a carriage.
August 30.—Fireman Thornton fell off his engine near Kelaniya and was killed.
November 28.—Patrol Linna run over and killed between Peradeniya Junction and Gampola.
December 1.—A platelaying cooly run over and killed between Talawakele and Watagoda.

In each of the above cases no responsibility rests with the Railway Department.

Calendar of Events.

January 1.—Freight on manure above Nawalapitiya reduced to Main Line rates.
January 1.—Issue of cheap season tickets to Government clerks and peons.
January 19.—Collision between Down Mail and a train of empty coaches near Maradana Junction bridge.
January 25.—Arrival of Mr. E. H. Wade, Assistant Traffic Superintendent, from leave of absence.
February 2.—Serious collision between a return empty special and 5.35 P.M. Up train at Slave Island.
February 14.—Mr. A. Paton Gray, District Engineer, promoted to Assistant Engineer of Ways and Works.
April 12.—Their Royal Highnesses the Duke and Duchess of Cornwall and York and suite travelled to Kandy by special train.
April 15.—Return of Their Royal Highnesses the Duke and Duchess of Cornwall and York from Kandy by special train.
May 17.—Arrival and assumption of duties of Mr. H. G. Unsworth, the new Locomotive Engineer.
May 27.—Departure of Mr. W. T. Pearce, General Manager, to England on three months' leave prior to retirement.

Mr. A. G. Perman assumed duties as Acting General Manager.
Mr. T. A. Wylie assumed duties as Acting Traffic Superintendent.
Mr. E. H. Wade assumed duties as Acting Accountant.
Mr. W. L. Byrde assumed duties as Acting Assistant Traffic Superintendent.

May 28.—Collision between 6.40 A.M. Down train and a train of empty coaches in Colombo yard.
June 7.—Earthslip near Talawakele, Up Mail delayed two hours.
June 14.—Rockslip between Ballany and Kadugannawa, Down Mail delayed nearly one hour.
June 15.—Derailment of tender of engine of 4.30 P.M. Down train from Nanu-oya between Kotagala and Talawakele.
August 3.—Rockslip between Alagalla and Kadugannawa, Down Mail delayed over two hours.
November 1.—Departure to England on leave of absence of Mr. J. Howison, District Superintendent, Nawalapitiya.
November 4.—Arrival and assumption of duties of Mr. G. P. Greene as General Manager.

Mr. A. G. Perman resumed duties as Traffic Superintendent.
Mr. T. A. Wylie resumed duties as Accountant.
Mr. E. H. Wade resumed duties as Assistant Traffic Superintendent.
Mr. W. L. Byrde resumed duties as District Superintendent.

December 1.—Tyer's Electric Train Tablet System brought into use between Maradana and Wellawatta.
December 17.—Arrival of Mr. W. R. F. Lukis, Assistant Locomotive Engineer, from leave of absence.

REPORT OF THE RAILWAY ACCOUNTANT FOR 1901.

I HAVE the honour to submit herewith Tables Nos. 1 to 44 in which full particulars are given of the receipts, expenditure, and work done by the Railway (including capital outlay on extensions under construction) during the year ending 31st December, 1901.

Valedictory.—By the retirement on pension, of Mr. W. T. Pearce from the position of General Manager on the 27th May after twenty years' service, the Railway staff as a whole and the staff of the Accountant's Department in particular lost a good friend and a considerate chief, who always took a keen interest both in the work and amusements of his subordinates, and did all in his power to promote their welfare.

Personal.—Mr. E. H. Wade, the Assistant Traffic Superintendent, again acted as Accountant from 27th May to 4th November, 1901, while I had charge of the Traffic Department during the time the Traffic Superintendent held the appointment of Acting General Manager.

Establishment.—Although the appointment of an Assistant Accountant was sanctioned in the latter part of 1900, the office was not filled until 28th August, 1901, when Mr. W. C. Davey arrived from England, where he was previously in the service of the Great Western Railway.

The Season Ticket Branch was strengthened in January by the appointment of an additional junior clerk at Rs. 360 per annum; but in consequence of a reduction in the second class season ticket rates from the 1st January, 1901, the business of this branch was still further increased, and notwithstanding this addition to the staff, it has not been possible to keep pace with the work, the returns being greatly in arrear at the end of the year.

Accommodation.—The need of additional office room has become a matter of urgency. It is with the greatest difficulty that the work of the Department is being carried on in the limited space now available, and valuable time is frequently lost owing to records not being easily accessible. Many of the clerks have barely elbow room, while myself and my Assistant are cooped up in a small room 21 ft. by 11 ft., half of which is taken up by furniture.

The scheme for a new central station includes spacious accommodation for the Head Office staff; but as this cannot be carried out for some time, the enlargement of the present building or the provision of supplementary office accommodation close by seems unavoidable, and will I trust be taken in hand before the opening of the Railway Extensions now under construction, as it is almost a matter of impossibility to make room for any additional staff in the existing offices.

Expenditure.—The total expenditure of my Department amounted to Rs. 79,998, an increase over 1900 of Rs. 8,015, of which more than half was under the head of Salaries, due to the ordinary annual increments and to the above-mentioned additions to the establishment. The remainder of the increase was principally on account of tickets and stores supplied to stations, which on other railways form part of the expenditure of the Traffic Department.

Financial Transactions.—The total receipts and payments dealt with during the year amounted to Rs. 12,977,489, or Rs. 22,129 in excess of 1900.

Railway Stores and Materials.—The freight charges (calculated at Engineer's rate) written off on coal, permanent way material, and other stores conveyed for the Locomotive and Maintenance Departments amount to Rs. 159,078, as compared with Rs. 94,460 in the previous year. This free transport of Engineer's stores and materials in traffic wagons represents a loss in the goods vehicle earnings in 1901 of Rs. 175 per truck, over and above the free use which the Locomotive Department have of upwards of 125 wagons every Sunday for the transport of firewood, and which puts a large proportion of these trucks out of traffic from Friday to Monday of each week, thereby frequently causing delay to ordinary goods traffic.

Check Office.—The staff of this branch is sufficient only to examine the monthly revenue accounts of stations and to get through the work of checking all passenger tickets, parcels way-bills, goods consignment notes, and invoices, when every man is on duty full time. Consequently, when the office is closed on the occasion of Government holidays, and men are absent on sick or privilege leave, or engaged in the preparation of special statistical returns, the ordinary work falls into arrears, and cannot be brought up without extra assistance. For this reason it was again necessary to employ four temporary clerks for a period of four months last year. The desirability of strengthening the permanent staff of this branch is thus clearly demonstrated, and I have had no alternative but to ask for the appointment of two additional junior clerks.

Ticket Irregularities.—I am glad to be able to report a diminution in the number of cases detected by the Travelling Ticket Inspector and his staff of persons travelling on the railway without proper tickets, the total being 1,504, or 104 less than in 1900; while the number of prosecutions was only 24, compared with 52 in the preceding year. Convictions were obtained in 19 cases, and in another the person was found to be insane, and was committed to the Lunatic Asylum.

The total amount of the excess fares collected at all stations was Rs. 17,960·16, of which 10 per cent. was recovered at Kelaniya, the examining station for Down Main Line trains running into Colombo, and Rs. 720·66 was the result of detections made by the Travelling Ticket Inspector and his two assistants.

The large increase in the issue of cheap monthly season tickets between Colombo and suburban stations has been accompanied by a considerable increase in irregularities in the use of these periodical tickets, and it has consequently been found necessary to strictly enforce the forfeiture of the deposit on all tickets not surrendered within three days of the date of their expiration.

I am convinced that the present staff of travelling examiners is insufficient to efficiently patrol the whole line, as their absence from the Coast Line for a few days for the purpose of examining trains on the Main and Branch Lines undoubtedly results in an increase in the number of persons overriding and travelling in a higher class than that for which they hold tickets. I am therefore asking for provision to be made in the Estimates for 1903 for the appointment of additional examining staff.

Coaching Vehicle Mileage.—Seeing that the receipts from coaching traffic show a decrease of Rs. 157,293 compared with the previous year, an increase of 24,005 coaching vehicle miles seems at first sight to call for some explanation. A careful scrutiny of the sectional mileage figures compared with the sectional earnings shows, however, that the Traffic Department has kept a close watch upon the working of the passenger traffic. The principal decreases in the passenger earnings have been on the Main Line below Nawalapitiya and on the Coast Line; and while an increase in the number of suburban season ticket-holders to the extent of 262,050 passenger journeys has prevented any reduction in the vehicle mileage of local trains, a decrease of 75,765 vehicle miles has been effected on other parts of the Seaside Line and 23,362 on the Main Line.

It is on the up-country sections of the line, where bogie passenger vehicles only can be worked, that difficulty is experienced in dealing with fluctuations of traffic. On the section between Nawalapitiya and Nanu-oya a decrease of Rs. 16,426 in the passenger receipts could not be compensated for by a reduction in the number of passenger carriages, in fact the vehicle mileage had to be increased to the extent of 41,567 miles to provide through carriages for the Bandarawela Line; while on the latter section an additional train daily each way to serve the requirements of the Boer Camp resulted in an increase of 105,145 coaching vehicle miles, against an increase of only Rs. 3,845 in the receipts.

Goods Vehicle Mileage.—The falling off in the ordinary goods traffic to the extent of 13,818 in tonnage and Rs. 218,396 in receipts would in ordinary course have resulted in a much larger decrease than 160,657 in the goods vehicle mileage, but unfortunately a very much larger quantity of Railway material had to be transported than in the preceding year, bringing about a nett increase in goods tonnage (excluding stone conveyed in Harbour Works trucks) of 368 tons. The principal decreases in the goods vehicle mileage were on the Coast Line 139,181 miles and on the Main Line 80,278 miles.

Average Load of Goods Vehicles.—A slight decrease of three tons is shown in the total tonnage carried per goods vehicle, the load moved in 1901 being 481 tons. The average load conveyed per goods truck per mile shows a slight increase, the weight carried being 3·520 tons compared with 3·476 tons in 1900. This result, taken in conjunction with a small decrease in the proportion of dead weight hauled to paying load, is most satisfactory, seeing that the Traffic Department is still unprovided with the means of keeping a proper check upon the movements of its rolling stock.

Average Load of Passenger Carriages.—The result of the large increase in the passenger vehicle mileage worked over the Nawalapitiya-Bandarawela section as shown above is a decrease in the average number of passengers conveyed per vehicle of ·95, the average in 1901 being only 11·37 passengers compared with 12·32 in 1900.

Goods Unit Earnings.—A decrease in the average receipts per ton of goods per mile from cents 13·95 in 1900 to cents 13·60 in 1901 is the result of the transport of a larger quantity of Railway material as mentioned above. Deducting all free goods, the receipts per ton per mile of ordinary goods averaged cents 14·56.

Passenger Unit Earnings.—The average receipts per mile per ordinary passenger shew a slight improvement, viz., cents 2·54 in 1901, or ·07 more than in 1900. This is due to increases of 10,800 and 11,583 respectively in the number of first and second class passengers conveyed, while in third class there have been decreases of 157,967 ordinary passengers and 147,586 coolies.

Gross Ton Mile Results.—Many causes have contributed to the nett decrease of Rs. 2·06 in the profit per 1,000 gross ton miles, viz., from Rs. 11·81 in 1900 to Rs. 9·75 in 1901. The drop in the receipts from Rs. 25·05 to Rs. 24·16 accounts for cents 89, while the increased expenditure, principally due to heavy repairs and renewals of permanent way and to enhanced cost of locomotive power (full explanation of which will be found in the General Manager's report), is responsible for an increase in the cost of working of Re. 1·17. The large increase in the quantity of Railway material and the unprofitable increase in the coaching vehicle mileage on the upper section of the line are two of the chief contributory causes, and these have already been explained.

May 19, 1902.

T. A. WYLIE,
Accountant.

330,272,713	... 6.—Gross Ton Miles ...	328,551,173

Additional Special Expenditure.

The above table does not include special expenditure on account improvements to Colombo Station and Station Master's house, Colombo, shown below, as the charge was met from the 3 per cent. Sterling Loan (Ordinance No. 17 of 1893), and it has therefore been added to the Capital Account :—

* The second line for 1897 has been worked on traffic train mileage only to compare with 1896.

† The second line for 1899 shows the locomotive expenditure under new heads of classification.

§ Includes loss on exchange of Rs. 161,151.

‡ Exclusive of New Works and Rolling Stock.

‡ The second line for 1899 shows traffic and running charges separately to compare with 1898.

Table 24.—Earnings and Working Expenses of the Bolton Line from 1885 to 1907 (includes Earnings and Expenses of the Manchester and Wigan Line from 1884 and of Farnworth Line from 1887).

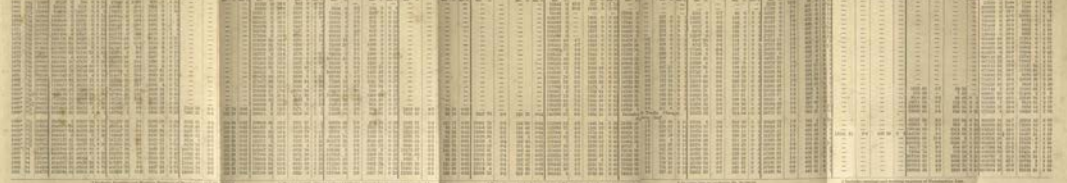

Table 25.—Earnings and Working Expenses of the Farnworth Line from 1872 to 1906 (included with the Bolton Line 1907).

Table 26.—Earnings and Working Expenses of the Brackenhurst Line from 1874 to 1907 (called Holden Quarry Branch from 1901—included with the Bolton Line 1904—not worked separately in 1907).

Table IV.—Earnings and Working Expenses of the Scotch Line from 1857 to 1901.

Table V.—Earnings and Working Expenses of the Irish Line from 1859 to 1901.

* The second line for 1887 has been worked on traffic train mileage only, to compare with 1888.

REPORT OF THE ENGINEER OF WAYS AND WORKS DEPARTMENT FOR 1901.

THE gross amount of working expenses of this Department (which includes maintenance of the permanent way, bridges and culverts, stations, goods sheds, and all other Railway buildings) was for this year Rs. 1,246,850·91, as compared with Rs. 1,037,929·34 in the previous year, showing an increase of Rs. 208,921·57. This increase is owing chiefly to heavy renewals of permanent way (rails, fastenings, and sleepers) and repairs to bridges and culverts during the year.

The expenditure on the Sea Coast Line, the Main Line, Bandarawela Line, and Matale Line shows an increase of Rs. 154,293·44, Rs. 124,465·12, Rs. 15,604·83, and Rs. 13,253·20, respectively, as against that in the previous year.

The expenditure on the Nanu-oya Line and Kurunegala Line shows a decrease of Rs. 89,998·71 and Rs. 8,696·31, respectively, as compared with that of the previous year.

The permanent way and works were maintained in efficient order during the year.

The renewals of steel rails and sleepers were :—

		1901.	1900.
Steel rails ...	Tons	2,623	1,993
Sleepers ...	No.	71,598	45,407

I annex lists of the obstructions which have taken place, rails broken, and new works carried out during the year

April 19, 1902.

W. CANTRELL,
Engineer of Ways and Works.

	Total ...	306,705 77

Table 13.—Estimated Works executed during 1901, provided for under "Loan Account."

Estimate No.	Particulars.	Expenditure in 1901. Rs. c.
872 ...	Station Master's house, Colombo ...	9,629 45

REPORT OF THE LOCOMOTIVE ENGINEER FOR 1901.

I HAVE the honour to report that the whole of the locomotives and rolling stock, plant, and machinery were kept in efficient working order during the year.

It will be necessary to provide some increased accommodation in the shops in Colombo with a view to standardizing the rolling stock, and also to enable me to adopt a proper system in the workshops to facilitate a necessary increased production of output with economy.

Five new engines for the Kelani Valley Railway were received and erected in Colombo workshops. Eight engines for the Northern Railway Extension were also received and erected, four at Jaffna and four in Colombo.

The engine mileage worked, including service, wayside and yard shunting, was 1,833,693 miles 40 chains, showing an increase of 20,751 miles 20 chains.

The train mileage, including service mileage, shows an increase of 9,266 miles 20 chains compared with 1900, the total being 1,356,021 miles 20 chains.

The vehicle mileage is decreased by 76,416 miles 58 chains compared with 1900, the total being 23,293,071 miles 69 chains.

The fuel consumption shows an increase of ·82 lb. per engine mile and an increase of 1·43 lb. per train mile.

The working expenditure for the year 1901 was Re. 1·056 per engine mile, showing an increase of Re. 0·070 as compared with the previous year :—

	Rs. c.	Rs. c.
Total expenditure	—	2,032,777 6
Less work done for other Departments	72,496 53	
Less deferred payment on account stores and materials drawn in 1900 and brought to debit in Locomotive Accounts for that year, but not paid until 1901 ...	22,508 78	
		95,005 31
Total Working Expenses ...		1,937,771 75*

The following were added to stock in 1901 :—

Royal saloon	1
Bogie thirds	4
Bogie tri-composities	1
Bogie brake thirds	1
High-sided wagons	15
Petroleum oil tank wagon erected on arrival from England	1

Four bogie thirds, 2 bogie brake thirds, and 2 tri-composities were built, but had to wait for under-frames ; 5 cattle wagons were built, but had to wait for buffer rods. Five engines for the Kelani Valley Railway were erected, and also the following stock :—

20 covered goods wagons	1 gunpowder van
8 bogie low-sided wagons	1 oil tank wagon
5 high-sided wagons	10 under-frames and bogies

Eight engines were received and erected for the Northern Railway, and the following stock was built :—

48 ballast wagons	2 heavy goods brakes

Repairs of Engines.

1900.	Work done.	1901.
10 ...	Thorough repairs	18
7 ...	Light repairs	10
9 ...	Erected	13
12 ...	Painted	16

During the year the following stock was fitted with vacuum brakes :—

Engines and tenders	5
Bogie carriages	9
Four-wheel carriages	5

Through pipes were fitted on five engines and 36 four-wheel vehicles.

The following vehicles were rebuilt :—

1 four-wheeled carriage	(third class passenger stock)
3 covered wagons	(goods stock)
2 high-sided wagons	(do.)
4 low-sided wagons	(do.)
2 iron high-sided wagons	(do.)

Repairs to Carriages and Wagons.

	1900.	1901
Carriages :—		
Four-wheel	99	104
Bogies	138	121
	237	225
Wagons	288	386
Bogie wagons	24	10

Twenty-six covered wagons had wheel bases shortened and 2 bogies had new steel under-frames.

The number of bogie carriages repaired appears low, but this was owing to the conversion of 4 bogie third class carriages to seconds, 2 bogie first class to drawing-room carriages, and 2 bogie tri-composites to second class.

* Excluding new works.

The following painting and varnishing was done :—

1900.		1901.
12	Engines painted	16
118	Carriages painted	159
245	Wagons painted	138
300	Roofs painted of all classes	271

Locomotive Engineer's Office,
Colombo, April 25, 1902.

H. G. UNSWORTH,
Locomotive Engineer.

Annexures.

No. 1.—List of Machinery in Workshops.

No. of Machine.	Description of Machine.	Condition.
	Machinery in Machine Shop.	
—	One double-cylindered horizontal steam engine, cylinder 12 in. diameter and 18 in. stroke, for driving machine shop	Good
—	Two old locomotive boilers for supplying steam to above	do.
1	Wheel lathe, chucks 5 ft. 6 in. diameter	do.
2	Do. 4 ft. 6 in. diameter ...	do.
3	Screw-cutting gap lathe, 11 in. centre, 16 ft. bed ...	do.
4	Screw-cutting lathe, 10 in. centre, 18 ft. bed ...	do.
5	Do. 7 in. centre, 12 ft. bed ...	do.
6	Hand lathe (sent to Kandy)	—
7	Planing machine to take 16 ft. by 4 ft. by 3 ft. ...	Fair order; but no use for heavy work
8	Planing machine to take 8 ft. by 3 ft. by 3 ft. ...	
9	Drilling machine	Good
10	Do.	do.
11	Shaping machine, 17 in. stroke, 7 ft. bed ...	do.
12	Given to Technical College	—
13	Screwing and tapping machine	Fair order for very light work
14	Slotting machine, 18 in. stroke	Old type
15	Shears and punching machine	Good
16	Screw-cutting lathe, 24 in. centre, 23 ft. bed ...	do.
17	Screw-cutting lathe, 6 in. centre, 8 ft. 9 in. bed ...	do.
18	Shaping machine, 14 in. stroke, 5 ft. 6. in. bed ...	do.
19	Screw-cutting lathe, 9 in. centre, 16 ft. 6 in. bed ...	do.
20	Wheel lathe, chucks 6 ft. 6 in. diameter ...	do.
21	Given to Technical College	—
22	Small bench drilling machine	Under repairs
23	Screw-cutting lathe, 6 in. centre, 9 ft. 6 in. bed ...	Good
24	Screw-cutting gap lathe, 11½ in. centre, 15 ft. bed ...	do.
25	Hand lathe, 6 in. centre, 5 ft. 6 in. bed ...	Fair
26	Do. 6 in. centre, 5 ft. 6 in. bed ...	do.
27	Lapping lathe, 6 in. centre, 5 ft. 6 in. bed ...	Good
28	Facing and boring lathe, chucks 3 ft. 6 in. diameter ...	do.
29	Drilling machine	do.
30	Wheel lathe, chucks 4 ft. 6 in. diameter ...	do.
31	Facing and boring lathe, chucks 3 ft. 4 in. diameter ...	do.
32	Shaping machine, 18 in. stroke, 8 ft. bed ...	do.
33	Radial arm drilling machine	do.
34	Shaping machine, 18 in. stroke, 8 ft. bed ...	do.
35	Screw-cutting lathe, 6½ in. centres, 9 ft. 9 in. bed ...	do.
36	Tyre drilling machine for wheels	do.
37	Wheel lathe, chucks 4 ft. 6 in.	do.
38	Screwing machine, ¼ in. to 2 in. diameter ...	do.
39	Thorne's portable drill	do.
40	Screw-cutting gap lathe, 18 in. centre, 12 ft. bed ...	do.
41	Do. do. ...	do.
42	Double ended bolt lathe, 6 in. centre	do.
43	Do. do.	do.
44	Emery grinder for twist drills	do.
45	Facing and boring lathe, chuck 3 ft. 4 in. ...	do.
46	Drilling machine	do.
47	Do.	do.
48	Keyway and slot drilling machine	do.
49	Piston rod grinder	do.
50	Brass finisher's lathe, 8½ in. centre, 5 ft. 6 in. bed ...	do.
51	Do. do. ...	do.
52	Sensitive drilling machine	do.
53	Slotting machine, 12 in. stroke	do.
54	Slide bar grinder	Fair
55	Wheel lathe, chucks 6 ft.	Good
56	Do. 4 ft.	do.
57	Do. 4 ft.	do.
58	Screwing machine, ¼ in. to 2 in. diameter ...	Fair
59	Side planing machine, 40 in. stroke	Good
60	Tyre drilling machine for wheels	do.
61	Lathe (non screw-cutting), 15 in. centre, 20 ft. bed ...	do.
62	Shaping machine, 10 in. stroke, 4 ft. bed ...	do.
63	Do. do.	do.
64	Hollow mandrel lathe, 9 in. centre, 10 ft. bed ...	do.
65	Do. capstan lathe, 6 in. centre, 6 ft. bed ...	do.
66	Do. do. ...	do.
67	Sensitive drilling machine	do.
68	Do.	do.
69	Screw-cutting gap lathe, 12 in. centre, 12 ft. bed ...	do.
70	Do. do. ...	do.
71	Do. do. ...	do.
72	Do. do. ...	do.
73	Do. do. ...	do.
74	Universal lapping and grinding machine ...	do.
75	Drilling machine	do.
76	Do.	do.
77	Double ended bolt lathe, 7½ in. centre	do.
78	Do. do.	do.
79	Drilling machine	do.

No. of Machine.	Description of Machine.	Condition.
80	Wheel lathe, chuck 4 ft. 6 in.	Good
81	Lathe for weigh-bar shafts	do.
82	Do.	do.
83	Wheel lathe, chuck 4 ft. 6 in.	do.
84	Do. do.	do.
85	Tyre boring lathe, chuck 6 ft.	do.
86	Tyre boring lathe, chuck 3 ft. 10 in.	do.
—	One double cylinder, horizontal, cylinder 10 in. by 18 in.	do.
—	One set plate rollers	do.
—	One hydraulic wheel press	do.
—	Three wooden troughs for grindstones	do.
	Machinery in Blacksmiths' Shop.	
—	Portable engine for driving circular saw, cylinder 7½ in. by 12 in.	Fair
—	Tangye's horizontal single cylinder engine, cylinder 12 in. by 18 in., for driving fan	Good
—	Two 10-cwt. steam hammers	do.
—	Two 5-cwt. steam hammers	do.
—	One old locomotive boiler, for supplying steam to above	do.
—	Circular saw, 2 ft. 8 in. largest diameter of saw	do.
—	Tangye's patent noiseless fan	do.
	Machinery in Colombo Running Shed.	
—	Sheer legs	Good
—	Coal crane	do.
	Machinery in Kadugannawa Running Shed.	
—	Screw-cutting lathe	Fair
—	Hand drilling machine	do.
—	Travelling crane and wagon	do.
—	Coal crane	Bad; should be renewed
	Machinery in Nawalapitiya Running Shed.	
—	Hand drilling machine	Good
—	Coal crane	do.
—	Hand lathe	Fair
—	Sheer legs	Good
	Machinery in Kandy Running Shed.	
—	Hand lathe	Good
—	Hand drilling machine	do.
—	Travelling crane and wagon	do.
—	Coal crane	do.
	Machinery in Carriage and Wagon Shop.	
3	Circular saw benches	Good
1	Long frame saw	do.
1	Boring machine	do.
1	Hand morticing machine	do.
1	Sewing machine	do.
1	Hand screwing machine	do.
1	Saw sharpening machine	do.
1	Drilling machine	do.
1	Double cylinder horizontal engine, 12 in. cylinder, 18 in. stroke	do.
1	Sixteen horse-power compound semi-portable engine	do.
1	Old Locomotive boiler for log frame saw	do.

Prison vans	1
Total	953
Bogie Goods Stock.	
Covered goods wagons	21
Low-sided ,,	4
Do. ,, iron	12
Goods and brake van composites (including breakdown van)	7
Total	44
Service Stock.	
Travelling cranes	5
Ballast wagons (including with low-sides)	—
Crane wagons	3
Bogie brake down vans (including with low-sides)	—
Total	8

Table 6.—Average Weight of Rolling Stock, &c., on December 31, 1901.

Particulars of Stock.	No. of each Class.	Average Weight. Tons cwt. qr.	Number fitted with Vacuum Brake.
Carriage Stock.			
State carriage, eight-wheeled bogie	1	20 10 0	1
Saloon carriages (including inspection car), eight-wheeled bogie	4	19 9 0	4
Second classes, eight-wheeled bogie	9	20 0 0	9
Refreshment cars, eight-wheeled bogie	4	21 12 0	3
First and second class composites, eight-wheeled bogie	19	20 9 0	19
Tri-composites (sleeping cars), eight-wheeled bogie	7	22 2 2	7
First, second, third, and brake, eight-wheeled bogie	3	19 15 0	—
First, second, and brake composites	1	—	1
Third class and brake composites, eight-wheeled bogie	36	17 16 0	34
Third class, including cooly carriages, eight-wheeled bogie	62	18 3 2	54
First, second, and third class tri-composites, eight-wheeled bogie	3	20 1 0	3
Royal saloon	1	15 10 0	1
Saloon carriages, four-wheeled	5	8 10 0	4
First class, four-wheeled	11	7 16 0	7
First and second class composite, four-wheeled	9	7 10 0	2
Second class, four-wheeled	16	7 14 0	11
Third class, four-wheeled	93	7 4 0	57
Passenger brake van, four-wheeled	23	7 10 0	20
Post Office vans, four-wheeled	2	7 10 0	—
Horse-boxes, four-wheeled	22	7 10 0	17
Carriage trucks, four-wheeled	17	5 16 0	10
Fish trucks, four-wheeled	12	5 10 0	7
Prison vans	1	6 4 0	—
Wagon Stock.			
Covered goods, eight-wheeled	21	12 18 0	—
Covered goods and vans, eight-wheeled	7	14 2 0	—
Low-sided, eight-wheeled	4	12 1 0	—
Low-sided bogie, iron, eight-wheeled	12	12 3 0	2
Covered goods, four-wheeled { to carry 12 tons, 274 / to carry 6¾ tons, 285 }	559	{ 6 11 0 / 5 17 0 }	162
Covered goods, iron, four-wheeled	20	7 2 0	—
Goods brake van, four-wheeled	32	11 10 0	—
High-sided, four-wheeled { to carry 12 tons, 54 / to carry 6 tons 16 cwt., 108 }	177	{ 6 0 0 / 5 4 0 }	30
High-sided, iron, four-wheeled	20	6 9 0	—
Ballast wagons, four-wheeled	83	{ 4 15 0 / 4 11 0 }	—
Low-sided trucks, four-wheeled	9	6 13 0	1
Gunpowder vans, four-wheeled	13	5 15 0	1
Cattle trucks, four-wheeled	8	4 13 0	—
Timber trucks, four-wheeled	26	5 8 0	1
Lime and oil wagons, four-wheeled	1	5 13 0	—
Tea leaf trucks, four-wheeled	4	9 6 2	1
Petroleum oil tank wagons

REPORT OF THE TRAFFIC SUPERINTENDENT FOR 1901.

1 HAVE the honour to submit for your information my Administration Report for 1901.

2. During the year the traffic was worked without accident to life or limb as far as passengers are concerned, though I regret to say that Under Guard Cramer lost his life by coming in contact with a bridge while his train was running between Henaratgoda and Ragama.

3. A collision of a serious nature took place at Slave Island on 2nd February, caused by the driver of a non-stopping train disregarding the signals and running into the rear of a local train that was being shunted at the station. Fortunately no lives were lost nor was any person injured, but the damage to rolling stock was very great, the engine of the colliding train being partially wrecked and three wagons completely smashed.

4. No slips or washaways of importance occurred, and no prolonged interruption to traffic took place.

5. The most notable incident of the year was the visit of Their Royal Highnesses the Duke and Duchess of York, which took place in April. Their Royal Highnesses arrived on the 12th and travelled up to Kandy the same day, returning on the 15th. The Railway arrangements worked perfectly, and His Royal Highness the Duke personally expressed his appreciation of the Railway service both to Mr. Pearce, the late General Manager, and myself.

6. The Royal visit attracted large numbers of travellers to the mountain capital, and it is estimated that the Railway conveyed more passengers to Kandy on 11th April (the day preceding the Royal visit there) than it has ever done before in one day.

7. Under such auspicious circumstances it was reasonable to expect a record year as regards the number of passengers carried, but I regret to have to announce a diminution to the extent of nearly 133,000 ordinary passengers.

8. This diminution was due to the cause that prejudicially affected the Railway in all its Departments, viz., the dulness of trade in two of the most important industries of the Colony, tea and plumbago. When the goods traffic is restricted, the passenger traffic suffers sympathetically, and it is a consistent fact that a good year for goods is also a good year for passengers. The cause is obvious: most of the inhabitants of this Colony are traders, or live by trading, and must travel to do their business, so that when the staple products suffer, the minor trader suffers too. When tea is not flourishing, estates reduce hands, reduction of estate labour means a corresponding reduction in rice, and less rice means less general goods to the dealer in general commodities, and consequently less passenger travelling; the same with plumbago, the pits are closed, the workers return to the towns, the boutiques in the vicinity of the pits are shut, no road transport is required, and consequently there are no longer cattle sheds and refreshment houses on the roadsides, all of which affect the Railway.

It naturally follows upon these remarks that the traffic in estate coolies also seriously fell off, so that we find so great a decrease as 147,600 for the year, or 400 per diem. It should be remembered here, however, that 1900 was an abnormally heavy year for coolies, the number who travelled being 300 per cent. over 1899. The figures for the past few years are interesting:—

1894	...	63,300	1898	...	169,200
1895	...	124,100	1899	...	64,700
1896	...	151,600	1900	...	274,100
1897	...	213,900	1901	...	126,500

With all this unfortunate falling off of passengers, there was necessarily a diminution of cash receipts, which amounted to Rs. 172,407, or a loss of 61 cents per passenger on those who did not travel.

9. As a slight set-off against the large reduction in single journey passengers, there might be mentioned an increase of 5,241 season ticket holders. It is probable a season ticket holder travels twice a day on all business days, or 25 days per month; if so, the number of single journeys represented by 5,241 monthly season ticket holders is 262,050, which would nearly outweigh the combined loss of ordinary and estate passengers, viz., 132,800 + 147,600, total 280,400.

10. The real facts are doubtless that, while the long distance passenger has considerably diminished, the short distance cheap season ticket holder has very largely increased; so that while we have carried even more passengers than we did last year, the revenue therefrom has not benefited.

11. *Goods.*—My remarks on the passenger traffic must make it obvious that a loss has taken place in the goods receipts, and I regret to have to admit to nearly Rs. 200,000. The actual figures are 193,828, viz., Rs. 210,667 in merchandise qualified by an *increase* of Rs. 16,839 in live stock.

When the whole year's work comes to be analyzed, it will probably be found that we have carried the traffic shorter distances, and that the lower grades have preponderated. Wherever the reason for the loss of revenue is found to lie, the Traffic Department has had as much work to do for the diminished return as it would have had had the receipts been as favourable as they were last year, for, as I have shown, it has actually dealt with a larger tonnage, although the Government has received less for it.

12. *Parcels.*—This is the only branch of the traffic service that shows an increased income; I am pleased to be able to record Rs. 10,000 advance on its account.

13. *Expenditure.*—So far from following the revenue in its downward course, the traffic expenditure has kept in line with the *work* the Traffic Department has had to do, and for the increased passengers conveyed and the somewhat increased tonnage handled there is an increased expenditure of Rs. 36,000.

I have looked very carefully into the reason for this, and I find the principal item is Rs. 13,000 on account of increments to the salaries of the management and of the clerical staff, in the proportion of Rs. 2,600 to the former and Rs. 10,400 to the latter, with which are included the Guards. I believe it was well known and quite anticipated that at first the Clerical Scheme would cause an increase in the expenses, and that it was realized that it would rectify itself in the course of a year or two, so I think the amount may be fairly eliminated from the increased *working expenses*, as it would have been exactly the same if the revenue had given us a large increase instead of a decrease. The *actual* increase in working expenses is really only Rs. 23,000, and of this the major part has been spent on improvements for the public convenience, *e.g.*, Rs. 5,000 has gone for the provision of a number of latrine coolies, and the employment of more porters and policemen to attend to the wants of passengers and keep the stations clean and wholesome; Rs. 7,000 has been absorbed in improved lighting of stations and carriages and in the supply of disinfectants and sanitary appliances; Rs. 3,000 in triplicate labels for passengers' luggage, which has been such a safeguard against loss; and in printing, advertising, and stationery. The remainder is made up of many items, such as waterproof clothing (which is issued biennially), Guards' watches, tarpaulins, claims, maintaining the tablet instruments, &c.

14. *Claims.*—Although the claims for compensation include several heavy items, the total Rs. 3,400 is only ·004 of the receipts, or 4½ cents for each Rs. 1,000 received for transport, or, say, three farthings per seventy-five pounds. I emphasize this fact because I think it reflects creditably on the large staff that comprises the Traffic Department. The principal items of the Rs. 3,400 are Rs. 1,700 for arrack destroyed when some trucks were derailed at Kadugannawa; Rs. 222 for some sugar spoiled by contamination with a disinfectant; Rs. 183 for silks, &c., stolen in transit; Rs. 228 for loss of passengers' luggage during the Royal visit (Rs. 150 in one case and Rs. 78 in another); Rs. 107 for damage to goods in a shunting accident at Maradana Junction; Rs. 134 for tea damaged by rain in transit. The remainder is made up of many small items.

15. *Tyer's Tablet System.*—This system of working trains in supersession of the train staff and ticket system, mentioned in my last report, was brought into operation between Maradana Junction and Wellawatta on 1st December, 1901, and although we have had considerable trouble in the initiation of an entirely new system, the difficulties are now mainly got over, and we expect to work without a hitch in future.

16. *Mr. Pearce's Retirement.*—On 27th May, Mr. Pearce, the late General Manager, went on leave prior to retirement, and I became Acting General Manager, which post I held until the arrival of Mr. Greene, the present General Manager, on 4th November.

17. During the year under review 1,936 special trains have been run; 1,433 articles were found in trains, and in many cases restored to their owners; and 700 prosecutions for cattle and personal trespass undertaken.

A. G. PERMAN,
Traffic Superintendent.

April 29, 1902.

PUBLIC INSTRUCTION.

REPORT OF THE DIRECTOR OF PUBLIC INSTRUCTION FOR 1901.

I HAVE the honour to submit my report for 1901, which is arranged under the following heads:—

I.—Administration.
II.—Higher Education.
III.—Technical College.
IV.—A Ceylon University.
V.—New Site, Royal College.
VI.—Block Grant System.
VII.—Text Book Committee.
VIII.—Conference of Inspectors.
IX.—Board of Education.
X.—Vidyodaya College.
XI.—Educational Progress.
XII.—Ways and Means.
XIII.—Educational Lectures.
XIV.—Inspecting Staff.
XV.—A Plethora of Examinations.
XVI.—English Teachers' Certificate Examinations.
XVII.—Training of Teachers.
XVIII.—School Gardens.
XIX.—School Treats and Prizes.
XX.—Visits to Museum.
XXI.—Drawing.
XXII.—Industrial Schools.
XXIII.—Drill and Physical Exercises.
XXIV.—Educational Library.
XXV.—Government Dairy.
XXVI.—Death of Her Majesty the Queen.
XXVII.—Gansabhawa Schools.
XXVIII.—Infant Teaching.
XXIX.—Mr. Van Cuylenburg's Report on India, &c.
XXX.—The new system of inspection as applied to Vernacular Government Schools.
XXXI.—Report of Inspector of Schools, Southern Province.
XXXII.—Report of Superintendent of School Gardens.
XXXIII.—Financial Summary.

I.—ADMINISTRATION.

(1) STAFF.

The Department was administered by myself up to November 23, when I went on short leave to England. Mr. Harward then assumed duties as Acting Director, Mr. Hartley taking his place as Principal, Royal College.

Mr. Ashley Walker, the Senior Inspector of Schools, went on leave in July, 1901, and is not likely to return to Service. He has served the Colony, in the Royal College and as Inspector of Schools, for twenty-six years, and has twice acted as Director for a short period. His knowledge of the Island, his fairness, and his interest in games and athletics will be greatly missed.

The distribution of the Inspecting Staff, after the departure of Mr. Walker, was as follows:—

Western Province, Mr. A. van Cuylenburg,
Central Province, Mr. E. A. Senaviratna (acting).
Northern Province, Mr. R. H. Leembruggen.
Southern Province, Mr. Henry Fernando (acting).

(2) TRAVELLING.

I managed to visit all the Provinces, adding Batticaloa, Vavuniya, and Mannar to the list of principal stations inspected. My annual visit to Jaffna had unfortunately to be postponed. I am but too well aware that I have not done a fourth part of what is required to be done in the matter of travelling, and I believe it would be to the interests of both Government and of managers that I should do a great deal more. I would here quote the following from the report of 1880 of Mr. (now Sir) Charles Bruce, Director of Public Instruction, on the subject:—

"The continually increasing work of the Department falls heavily on the Director, and threatens to tie him too much to his office. When the Director moves about, making *in situ* inquiries and coming into contact with district officers, Missionaries, and native officials, he can learn rapidly and with certainty a great deal that cannot be gathered

from official reports. In questions relating to grant-in-aid schools especially personal intercourse is sometimes able to smooth away difficulties which official correspondence seems only to swell. I hope therefore that I shall not again be so completely fettered by office work as I was last year."

A return in the Appendix shows the travelling done by the Inspectors and their Assistants.*

II.—HIGHER EDUCATION.

(1) THE ROYAL COLLEGE.

By Mr. J. Harward, Principal.

No change has taken place on the permanent staff. Mr. Lewis Walker, M.A., returned from furlough at the end of July, and Mr. C. H. Kriekenbeek reverted to his own post, relieving Mr. Henry Fernando, B.A., who has been appointed to act as Inspector of the Southern Province. The arrangements for work in the lower part of the school, which had existed during Mr. Walker's absence, continued without change, Mr. F. van Cuylenburg acting as Assistant Master in the Second Class, and remaining in charge of the First Form. On November 21 I was transferred to act as Director, and Mr. C. Hartley, M.A., was appointed to act as Principal, in addition to his own duties as Lecturer on English and Modern Languages.

The following table shows the condition of the school for the last two years as regards numbers, attendance, and school fees :—

	1901.	1900.
Average number on register	313	319
Average attendance	283	291
Percentage of attendance	90	90
Candidates examined for admission	132	132
Number admitted	70	80
Number left	78	70
School fees	Rs. 19,775	Rs. 20,515

The numbers may be regarded as stationary; it would be easy to increase them to a much higher point. But the limits of the staff and accommodation render it desirable to fix them at a point a little above 300. The uncertainty as to the period when the older boys will leave renders it difficult to regulate the number with exact precision.

The special prizes for the year were awarded as follows :—

Turnour Prize	V. M. Fernando.
Director's Prize for Classics	O. L. de Kretser.
Shakespeare Prize	E. G. Mack.
De Soyza Science Prize	E. H. Beling.
Rajapakse Prize	C. I. de Silva.
Hewawitarana Prize	O. L. de Kretser.

In the examination for the University Scholarship, awarded on an examination in Classics and English, the two Royal College candidates, V. M. Fernando and O. L. de Kretser, took the first and second places respectively, their marks being 863 and 851 out of a maximum of 1,250. The Examiners' report on their work will be found elsewhere. It is worth noting that this is the second year in succession in which the first two places in this examination have been taken by candidates from the Royal College. V. M. Fernando has proceeded to Merton College, Oxford.

The following table shows the results gained by the Royal College in the Cambridge Examinations in 1899 and 1900 :—

Seniors.	1900.	1899.
Number of candidates	23	14
Number of certificates obtained	14	7
Number in Honour's Division	4	1
Juniors.		
Number of candidates	53	43
Number of certificates obtained	32	32
Number in Honour's Division	7	9

In the Junior Examination the first few places in the Ceylon list were taken by Royal College boys. The number of failures in the Junior Examination is an unsatisfactory feature in these results.

One form in the Upper School (Form V. B) and the four highest forms in the Lower School were examined by the Cambridge Syndicate. Their report, which is printed in full in the Appendix,† is on the whole very satisfactory. The weakest point seems to be the Arithmetic of the three highest forms in the Lower School. I am inclined to think that not enough time has been given to this subject.

The health and conduct of the school throughout the year have been satisfactory.

J. HARWARD.

---

* See Appendix No. 1. † See Appendix No. 1A.

(2) THE UNIVERSITY SCHOLARSHIP.

The examination for this Scholarship was held, as in previous years, by the Oxford and Cambridge Schools' Examination Board. This year the prize was awarded for proficiency in Classics, and was won by V. M. Fernando, a pupil of the Royal College. The Scholarship has now been raised to £200 a year, together with passage to and from England, and an outfit allowance of £50. It is therefore a valuable prize. The examination is ably and admirably conducted, and no doubt the best scholar of the year is selected so far as examinations are a competent test. It is, in my opinion, a good thing that our best boy of the year should be sent to an English University. There are of course disadvantages, but, I think, the advantages on the whole easily outweigh them. There is, however, a tendency to suppose that every "scholar" must needs try for the Civil Service and be disappointed if he fails. This is a pity. The competition for the Civil Service is more severe each year. Our "scholars" start with many drawbacks compared with candidates educated in England. They should look upon their chances in the Civil Service Examination as so problematical as to be barely worth considering, and select some other calling as the more probable aim of their ambition. One of our recent scholars, for instance, has wisely selected Engineering. Every effort is now made to keep in constant touch with the "scholars" in England, to encourage them in their work, and let their tutors know that interest is taken in them. The faults of the system are (1) that there is only one scholarship. It was thought better, after some discussion, to give this for Classics and Mathematics alternately; but obviously a boy may be a very good second in the Classical year, but be unable to go in again the following year because the scholarship is Mathematical, and be over age the third year. (2) Only one boy wins the prize, and the other competitors, however well they do, have nothing to show for it. This diminishes the number of competitors, and thus the best teaching powers of the large schools are devoted to one or two boys. It was not easy to see a way out of this while the "University" question was in the chaotic state it has been in for some years past. But before very long now it ought to be possible to find a sensible solution.

The results of the examinations for 1900 and 1901, together with the reports of the Examiners, are given in the Appendix.* Those of 1900 were inadvertently omitted from my report for that year.

(3) CAMBRIDGE LOCAL EXAMINATION, 1901.

The number of candidates in 1901 was 508; in 1900, 429; in 1899, 386. Of the number for 1901 (508), 31 withdrew from the examination owing to illness and other causes. The increase in number is largely due to the admission of Junior candidates over sixteen years of age without any further restriction. In previous years Junior candidates between sixteen and eighteen were only admitted to the examination for the purpose of qualifying themselves for exemption from the preliminary examination of some professional examination. The restriction has now been withdrawn, and Juniors over sixteen can enter freely for the examination, but are given pass certificates only. The number of Junior boys who entered this year was 268, as compared to 210 in 1900; and the girls 86, as compared to 72 in 1900. Twenty-six Senior girls entered in 1901 and 15 in 1900. There has been no material change in the number of Senior boys, 126 having entered in 1901 to 127 in 1900. The tables in the Appendix† will give all further particulars.

(4) LONDON MATRICULATION EXAMINATION.

Eleven candidates entered for the examination in January and two passed. For the June examination three candidates entered and one passed:—

January, 1901.

First Division.

D. B. Dabrera	...	St. Joseph's College

Second Division.

T. C. de S. Jayasinha ...	...	Private Study

June, 1901.

First Division.

Miss M. C. B. Smith ...	...	Queen's College, Colombo

(5) DIAMOND JUBILEE PRIZE EXAMINATION.

Three candidates entered for the examination. The prize was won by A. A. Fernando of St. Sebastian Boys' High School, Moratuwa.

(6) KING'S SCHOLARSHIP FOR GIRLS.

An important alteration has been made as regards this Scholarship (which is conferred in terms of clause 95 of the Code). Hitherto it has been tenable only in Ceylon, the successful candidates usually electing to attend one of the better known high schools here and take up special subjects. Now it has been decided, in the case of Miss M. C. B. Smith, that the Scholarship is tenable in England under certain conditions, and Miss Smith has the honour of being the first Ceylon trained King's scholar to so hold it, for she illustriously satisfied the new conditions by matriculating at Girton. The value of the Scholarship pecuniarily is at present exceedingly small; we may hope that the change of conditions is but the prelude to a more bountiful provision for our ablest girls.

---

* See Appendix Nos. 2 and 3. † See Appendix No. 4.

III.—CEYLON TECHNICAL COLLEGE.

By Mr. E. Human, Superintendent.

I have the honour to report that the number of students on the roll of the College in all the Departments during the year 1901 was 223. The greatest number working at the College at one time was 193. The number was divided as follows :—

(1) Department of Civil Engineering ..	33 ...	Two batches in October, first- and second-year students.
(2) Department of Surveying and Levelling...	17 ...	—
(3) Department of Telegraphy and Electrical Engineering ...	121 ...	First- and second-year students, and new admissions in October.
(4) Department of Mechanical Engineering	5 ...	—
(5) Department of Drawing and Art ...	47 ...	—

The only change in the staff was the appointment of Mr. V. A. Loos as Clerk and Storekeeper in place of Mr. Hoole appointed Secretary of the District Court, Batticaloa. I offer the following remarks on each Department :—

Department of Civil Engineering.—A new batch of students numbering sixteen was admitted in October, 1901. These students entered on a three-year course, instead of the two-year course of previous years. The change was made at the instance of the Secretary of State, who desired that the training should be in accordance with the requirements of the Examination Board of the Institution of Civil Engineers. The Institution of Civil Engineers is not an Examining Board for this College nor for any other. But it holds professional examinations for admission to the Institution, and its syllabus has been taken as a model to be followed for the course of training in this College. At the time that the new batch of students was admitted, there was still in training the previous batch who had not completed their training, and both batches were dealt with for the remainder of the year. The previous batch completed towards the end of the year their final examination in surveying and levelling conducted by two officers of the Surveyor-General's Department (Messrs. Ingles and Dawson). The examination lasted several weeks; and this necessary interval in their training, together with the rather longer time given to their training in those special subjects, caused their course in the College to be extended in point of time beyond the normal two years. Twelve out of sixteen of those candidates passed that examination.

The occasion of that examination in surveying and levelling for the Civil Engineering course was used also for submitting the majority of Civil Engineer students of the 1898-99 course, who failed in 1899, for re-examination in those subjects. By the courtesy of the Surveyor-General nine of those students were re-examined, and all of them passed.

Of passed students of this Department, it should be recorded that Messrs. Jonklaas and Nathanielsz were promoted from Head Overseers to Inspectors in the Public Works Department, Ceylon. Mr. Nathanielsz obtained leave to proceed to England for further study and practice in Engineering, and obtained a free passage home as a useful hand in the engine-room of the steamer. Mr. G. B. Honter was appointed a Head Overseer under the Government of the Straits Settlements. Mr. A. P. Brohier, who gained the certificate of this College for the 1894-95 course and proceeded to England for apprenticeship, was appointed District Engineer of the Public Works Department. Messrs. Stork, Van Twest, Senaviratna, and Walbeoff, who passed in the 1896-97 course, were appointed Head Overseers.

Department of Surveying and Levelling.—The students of the previous course (1900) were examined during February, March, and April by an officer of the Surveyor-General's Department (Mr. Ingles). Out of twelve students submitted eight passed. A new batch of students, numbering seventeen, was admitted in February, 1901, and their training proceeded for the rest of the year. Of passed students of this Department, Mr. A. Poulier gained an appointment as Overseer in the Department of Public Works under the Government of the Straits Settlements, Mr. Thornhill gained an appointment in the Surveyor-General's Department, Mr. Vandersmagt gained an appointment in the Irrigation Department and was subsequently transferred to the Colombo Municipality, Mr. Reimers gained an appointment as Assessment Surveyor at the Colombo Municipality.

Department of Telegraphy and Electrical Engineering.—Thirty students of the 1898-1900 course were examined towards the end of the year, eleven were passed for appointment on the Railway, nine were sent to the Railway for probationary trial, five were passed for appointments to the Telegraph Department of the Post Office, and one was sent for probationary trial to the same Department.

Entrance examinations for admission of a new batch of students were held in Colombo and Jaffna in August, 1901. Upwards of 107 applications were made, and 99 were examined. Out of these, 64 were nominated, and 59 joined the College in October, 1901. Another entrance examination was held in December in Colombo. 149 applied, and 140 were examined. As a result, 38 of these were recommended for nomination.

The increased number of admissions to this Department of the College was due to the requirements of the Railway Department for a larger number of recruits for the extensions of the Railway System. It was arranged that a modified training to last one year should be arranged so as to turn out by the desired time the extra numbers required during the next two years.

Department of Mechanical Engineering.—The students of this Department were examined for their final examination in August, 1901. Only five were submitted, and all of them were recommended for a pass.

Department of Drawing and Art.—This Department was opened early in the year, and by the end of the year the numbers on the roll in the various classes were as follows :—

Class for training teachers, including Normal School Pupils	28
Painting class for ladies	2
Classes for apprentices and others	7
Classes for boys and girls	10

Steps were taken at the end of the year for securing the service of a matron to attend all classes when young women and girls are present.

In regard to the general affairs of the College, there is one notable thing to record, viz., that orders were issued by Government at the end of the year for the new buildings for the College to be started and pushed on as fast as possible. In other matters it may be recorded that the students of the Civil Engineering Department and of the Surveying and Levelling Department went into camp for a fortnight for field work in September. A party of students of the Telegraph Department of the College erected a temporary telegraph line from Kosgoda to the Volunteer Camp at Urugasmanhandiya as in previous years, but the Postmaster-General took it over on the order of Government, and he became responsible for it just as first connection was completed, and before defects were remedied or adjustments could be made by us, and before it was open for traffic. "B" Company of the Ceylon Light Infantry Volunteers, formed principally of the College students, attended the annual encampment. The Company won the Commandant's prize for the neatest and cleanest hut.

The College shows increased activity with every year, and it is certain that better efficiency in all departments accompanies the march of time. The College is entering on its ninth year of existence, and it has grown from fifty students in one department to—at the date of writing—223 students in five departments, as enumerated at the beginning of this report.

E. HUMAN.

IV.—A CEYLON UNIVERSITY.

There are good grounds for thinking that this important question will be settled in what seems to us the most satisfactory way possible, viz., by the continuance of the London University Examinations. It will be remembered that in 1898 that University warned us that its colonial examinations would only be kept on for two years more, a decision which caused us to fall into the various dilemmas detailed at some length in the last two annual reports. But it is more than probable that the newly constituted Senate will reconsider this decision and continue the examinations; and we can ask for nothing better for our Ceylon youths, who can thus obtain a degree really worth having, instead of the various unsatisfactory alternatives that stared us in the face. The question may therefore be looked upon as closed. It is interesting to notice that Burma has had to face a similar problem to our own. It has hitherto been affiliated to Calcutta, but a very able paper by the President of the Educational Syndicate, Rangoon, lays before Government the reasons why a severance of the connection is absolutely necessary, and what the leading defects are in the Calcutta examinations. The paper is too long to quote *in extenso*, but copies of it can be borrowed from my office. I will quote only one sentence:—"It is a matter of common knowledge among all engaged in educational work in this Province that the papers set at the Calcutta examinations lend themselves to that most pernicious of all systems of instruction, if we may degrade the term, namely, *cram*."

Burma is of course a large enough place to contemplate a University of its own, and the paper referred to strongly recommends that solution of the problem.

V.—NEW SITE FOR THE ROYAL COLLEGE.

A scheme for the removal of the Royal College from its present to a more suitable site was laid before Government, and is promised consideration. The idea has very properly met with much criticism from several of the "old boys," who are bound by ties of association and sentiment to the present locality, and one would deeply lament the non-existence of such feelings in the case of so notable and successful a school. They were manifested with equal force in the case of the great London schools, the removal of which to more suitable sites has nevertheless been attended with undoubted success. When the College was placed where it now is, it served admirably a population which, then, was mainly resident round about it, and it was free from those serious drawbacks of noise, dust, and disturbance which the railways, tramways, and carriage traffic of a rapidly increasing population brought with them. A census of the boys taken during the present year showed that already the majority of them live in the neighbourhood of the proposed new site, while of those who live near the present College many are boarded there simply because the College is where it is. It would be as impossible to assert that the present buildings and playground are worthy of a great school as to deny that the din of growing traffic, the filth of an Eastern crowded thoroughfare, and the plague of lake flies are very disturbing to academic calm and concentrated study. The proposed site is a 10-acre block of Crown land near the racecourse in the angle formed by the Serpentine and Thurston roads. It appears admirably adapted to the purpose in view, with plenty of room for worthy buildings and every form of playground, while to apply the argument of inaccessibility to perhaps the most fashionable neighbourhood of Colombo is of course an argument of despair. The cost of removal will no doubt be considerable, but so is the value of the present site for commercial (if no longer for scholastic) purposes, and one may fairly be set against the other.

VI.—THE "BLOCK GRANT" SYSTEM.

It is well known that in England a revolution has been effected during the last two or three years in methods of inspection and examination. "Payment by results" and "individual yearly examinations" have been utterly condemned; a block grant is now paid to each school for general efficiency; fixed annual examinations are held no more; the teacher is given very wide latitude as to framing his time table, arranging his classes, making promotions, &c.; and the Inspector in most cases merely listens to the work going on, or holds a brief sample examination of a class taken at random. Whether the change has not been a little too rapid and complete even in England remains to be seen. It is obviously the opinion of many authorities that, but for the political influence which the teachers acquired through their organizations, a less sweeping change would have been tried, enabling Inspectors to insist on a doubtful school being thoroughly and individually examined without inflicting a very serious stigma on that school as is the case at present. Anyhow, it is clear that in Ceylon, while applauding the underlying principle, we are very far from being ready for so drastic an alteration. We must have many more trained and competent teachers and an increased inspecting staff before we can attempt it as a whole. Two slight, but very important, experiments have, however, been tried this year in that direction:—

(1) The Board of Education appointed a committee to consider in what way our principal grant-in-aid English schools could wholly or partially be freed from the admitted drawbacks of the

present system. They took up three schools, and prepared a careful scheme for the payment of these schools, so far as all but their elementary standards are concerned, on their average attendance, and their general efficiency as tested by incidental examinations only. This was accepted by Government on condition that no extra cost was incurred, a proviso which, though not unaccustomed, is not easy of fulfilment in the case of a new scheme where some elasticity is desirable.

The main point of the scheme is to free the whole of the school above Standard IV. from individual examination by the Department, and for "payment by results" is substituted payment for each unit of average attendance, certain conditions being fulfilled. Of these, the most important are preparation for, and reasonable success in, certain named examinations; a satisfactory syllabus of instruction; a sufficient staff (the proportion of scholars to teachers being laid down); an approved time table; and inspection and report by a Government Inspector. The grant may be on the higher or the lower scale, depending on the report. In fact the lines of the English Code have been followed as closely as possible. We have every reason to hope that the experiment will be a success, and to try and make it so, in order that it may be gradually extended to our more important boys' and girls' schools throughout the Island.

(2) Further, in order to arrive at some conclusion as regards vernacular schools, the Inspectors of the Western and Southern Provinces at my request each selected those six of their (Government) schools which seemed to them best adapted for the experiment. Nine of these schools we have exempted from the usual complete examination for at least two years. We have invited the head teachers to use a free hand as regards promotion and as regards improvements in the time table and curriculum. Both the Inspectors have taken great interest in the trial, and Mr. Van Cuylenburg in particular has brought to it those new ideas which he owes to his extensive educational reading and his recent visit to India. Visits without notice and sample examinations will of course be held from time to time, and at the end of the prescribed period the usual complete examination will be held. Little by little our list of vernacular schools deserving of this exceptional treatment will, it is hoped, be added to.

VII.—THE TEXT BOOK COMMITTEE.

Two useful jobs have been done during the year by this committee. A complete list of all the books in the Educational Library has been made out and sent to all managers. Any of these books can be borrowed from the Library for a fortnight. It is hoped that in this way a desire for some of the newer "readers" will be created, for at present far too little use is made of the splendid variety of cheap school literature which is being poured forth in England, and both teachers and pupils suffer from a constant repetition of the same antiquated manuals. The committee also met on the subject of supplying two crying wants, a special Geography manual and a special History manual for Ceylon. It was decided to deal with the former first, and Government consented to offer a bonus of Rs. 500 to the compiler of the best work. A prospectus was therefore issued and specimen chapters called for.

Several works in Sinhalese and Tamil have been referred to the Sinhalese and Tamil sub-committees, and have been or are being reported on by them with a view to their being recommended to our schools.

A much-felt want is about to be supplied in the shape of a short History of England in Sinhalese. The work of compiling it from the best modern handbooks has been entrusted to Simon de Silva, Mudaliyar of this Office (the author of a well known History of Ceylon in Sinhalese, of which three editions have been called for). The work will be ready by July, 1902; it will consist of about 130 pages, and cost 50 cents. After approval by the Text Book Committee it will be ready for issue. It is principally meant for Anglo-Vernacular Girls' Boarding Schools, which, under the amendments for 1902, can take it up as an alternative to Arithmetic in Standards VII. and VIII.; but I hope it will also be of use as an alternative book in Schedule B, Standard VI., and Schedule D, Standard VII. or VIII.

Mr. Van Cuylenburg (Inspector of Schools, Western Province) has nearly completed the preparation (with the aid of his assistants) of a volume of "Notes of Lessons" in Sinhalese. The book is a translation from some half dozen of the best modern authors on Class Teaching and School Management, and will, it is hoped, be of real use to vernacular teachers throughout the Island, who are unable to make use of English manuals. This will also be laid before the Text Book Committee and issued early next year.

The translation into Sinhalese of some of Mrs. Brander's excellent books on object lessons is also in hand.

VIII.—CONFERENCE OF INSPECTORS.

This (the second of its kind) was held on April 16 and 17 in Colombo, and all the Inspectors attended. It has now become an annual fixture, and is, I believe, of real benefit to all of us. Each Inspector is asked to bring forward (with notice beforehand) any suggestions he has to make as to changes in the Code or in administration, and the Director also prepares a list; and any changes affecting aided schools which are passed by the conference are shortly afterwards laid before the Board of Education. In this way no changes are introduced which have not been laid before two very different but equally competent bodies of critics. It is also of the greatest value to the Director to meet all the Inspectors collectively once a year in an informal way and discuss many points of importance to the efficient working of the Department.

IX.—THE BOARD OF EDUCATION.

No change took place during the year in the constitution of the Board, except that the Very Rev. Father Lytton temporarily took the place of the Very Rev. Father Collin while the latter was absent on leave.

The Board met on March 16, March 28, and May 12 to deal with the very important question of the new drawing schedule, which was finally got into shape and passed on the latter date. It met on the same dates for general business and to discuss proposed amendments to the Code for 1903. It met on June 8, July 13, September 2, September 28, and November 2 to arrange for and scrutinize

the papers set for the English Teachers' Certificate Examination, and on July 13, September 2, and November 2 to adjudge the results. This is one of its most important functions, and is, in my opinion, excellently carried out. One could wish that the results of the examination were in proportion to the trouble bestowed on the arrangements for it.

I must once more be allowed to express my sincere gratitude for the invaluable co-operation of the members of the Board.

X.—VIDYODAYA COLLEGE.

The want of an institution for the encouragement of Oriental literature had long been recognized, and the establishment in 1870 of the Vidyodaya College in Colombo was designed to supply this want. Since its inception the Vidyodaya College has been under the able management of High Priest H. Sumangala, an admittedly competent scholar. The primary object of the institution was the education of monks in the sacred books relating to Buddhism, but a course of instruction was also made available in Sanskrit and the higher branches of Sinhalese classics, thereby attracting a large number of priests and lay students. The number of students at the institution continued to increase, and the payment of a special annual grant of Rs. 600 towards the maintenance of the College was sanctioned in 1873 during the *régime* of Governor Sir William Gregory. In 1880 the grant was increased to Rs. 1,000 per annum in view of the progress of the institution.

At present certain conditions are attached to this grant. A yearly examination is held by examiners appointed by the Director of Public Instruction, with the approval of the Principal. The result of the examination is reported to Government, and the grant then paid to a trustee authorized to receive it.

It may be mentioned here that the success of this institution has aroused competition, and similar institutions have sprung up in other places and are doing good work, though they do not at present receive grants.

The examination of the College for 1901 was conducted under the supervision of the Department. The examiners were High Priest Subhuti in Pali, Dhammananda Thero of Ratmalana in Sanskrit, Mudaliyár Simon de Silva in Classical Sinhalese, and Mr. R. de Silva, Sub-Inspector of Schools, in Arithmetic. The number of students has increased, and the results of the examination on the whole appeared to be satisfactory. Eighty-eight students presented themselves in Pali, 80 in Sanskrit, and 26 in Arithmetic.

The Director personally visits the institution once in six months.

XI.—EDUCATIONAL PROGRESS.

This makes a very attractive heading for a paragraph, but is beyond doubt the most difficult subject of all to deal with. Considering the variety of views that are held on the question of education, and the very conflicting statements that are to be met with in speeches, articles, and books on the subject, he is a wise man who admits that he is certain of very little, and who is inclined to ask of Progress the same question that jesting Pilate asked of Truth. So perhaps it would be as well to note down briefly here only what appears to be progress to the Director, not confidently stating that it is so, or denying the possibility of its appearing distinctly retrogressive to other more competent authorities. It may be dealt with as (1) numerical, (2) material, (3) theoretical progress.

(1) Our numerical progress is fairly well shown in the general tables of this report. In deciding whether this is or is not a creditable result, it must be remembered that the circumstances of our attendance system are peculiar. In the towns we have no attendance obligation whatever, and the collective population of our towns is 353,137. In the country we have no compulsory attendance in the European sense. Where there is a Gansabhawa (Village Council), it may or may not make a by-law as to school attendance; but this only affects a small part of the population, for Village Committees do not exist universally even in Sinhalese parts, and not at all in Tamil parts, thus excluding perhaps about $\frac{1}{8}$ of the population. And where such a by-law exists, the due working of it depends entirely on co-operation between the Revenue Officer and the Education Department; in fact, upon personal influence. It will thus be seen that our system is very largely a voluntary one, and to compare Ceylon with any part of Europe where a compulsory system is in force would be very unfair. I am by no means clear that a compulsory system on European lines would be advantageous for Ceylon, but I should certainly like to see the principle of Gansabhawa by-laws introduced much more universally in country, and especially in Tamil parts; while as to towns, I cannot help regretting the absolute lack of interest in education shown by Municipalities and Local Boards, nor can we look for much improvement in town attendance until this is changed. It is at least satisfactory to note that the attendance at Government schools has largely increased since the introduction of the new rules referred to on page 5 of last year's report, and the best thanks of the Department are due to the Revenue Officers for their invaluable help in the matter.

(2) As to material progress, there is not much to record. The question of buildings—such a crying one in England—is with us comparatively unimportant. Nor are we troubled much with ventilation, hat pegs, drainage, and other sanitary matters which rack the soul—and the purse—of the English manager. But in the matter of maps, globes, pictures, and books we are, on the whole, some way behind the times. It will be seen later on (p. 13) that we have not money enough even to give ordinary furniture to our Government schools: it is obvious, therefore, that we have nothing for those "extras" which form so striking and attractive a part of education elsewhere. Things are no better in the large majority of our Aided Schools, though I must thankfully acknowledge many attempts on the part of managers to meet suggestions on my part. It is of course not want of will, but want of money that interferes. Probably competition affords our best hope of improvement.

(3) As to theoretical progress, we stand on much less certain ground. The Amended Code for Aided Schools came into operation on January 1 of this year, and on pages 8 and 9 of the Administration Report for 1900 will be found a *resumé* of the principal changes involved. As the person responsible for most of these changes is myself, it will not be surprising to learn that I think most of them have worked, and are working, beneficially; while at the same time I have done, and wish to do, my best to court the fullest criticism of weak points, I would admit at once that the putting a stop to the crimping of pupils has proved a more difficult task than I expected, nor am I entirely sure that Departmental interference is not liable to do more harm than good. On the other hand, I think

I trace good results from the reduction of the English reading standard, the introduction of object lessons, the abolition of licenses, the restricting of specific subjects, the encouragement of drill and physical exercises, and the encouragement of English literature.

Two important additions to the Code have been sanctioned by the Governor in Council during the year. A temporary drawing school has been erected and classes started under the superintendence of Mr. Bartlam, the recently-appointed Drawing Master of the Technical College. It was therefore necessary to introduce a drawing schedule at once. The object kept in view has been to leave as much latitude to the teacher as possible, and to make the stages of drawing quite independent of the standards. For many a boy has a turn for drawing who is a dunce at arithmetic or reading, and it is absurd that he should not be allowed to expand in the way Nature intended.

A change has also been made as regards arithmetic, for which I am mainly responsible. My own feeling is that the worst feature of our Codes is that they are too inelastic. They lay down a hard and fast standard in a lordly sort of way, as though ideas and requirements which apply to a flourishing school in Colombo were equally applicable to an isolated little school in the interior of Uva. We shall only have a good Code when we have a sufficient choice of schedules to suit all needs. Meanwhile a first step in this direction has been taken in the matter of arithmetic. A revised schedule was drawn up and inserted in the Code for 1901, by no means too difficult for town schools, but in my opinion not to be expected of backward and outlying schools. A much easier schedule has now been supplied for such schools, which ensures a knowledge of elementary arithmetic, but leaves out or postpones to a later stage the more difficult parts; while at the same time schools which take up the more advanced schedule are rewarded by a higher grant. It is hoped that this will be a real relief to managers, who have hitherto complained, and, I think, with justice, that our ambitious requirements in arithmetic created a disheartening dilemma.

It may be dangerous, but it is perhaps a duty, to lay down in a few lines some sort of a theory for the future. On such a theory there must necessarily be wide differences of opinion, but some such attempt is surely better than merely mechanical existence from hand to mouth. The points which I venture to think we ought to keep steadily in view are the encouragement of better modes of teaching, greater latitude in our curricula and school arrangements, the improvement of the status and pay of teachers, and an increasingly sympathetic relationship between the Department and managers and teachers. To deal with them very briefly. For the better modes of teaching I look to our new Training College, to model lessons from our Inspectors, and to the co-operation of managers and of our best teachers. We have first to realize how much there is to be done; how terribly backward we are in our methods of dealing with such subjects as History and Geography for instance; how much too ambitious many of our best schools are as to the number of subjects they aspire to teach; how much easier and therefore more common it is to encourage mechanical memorising instead of cultivating observation, intelligence, inquiry; how useless lessons are unless the teacher prepares them beforehand. As we improve in these points, it will be more and more possible to relax our too strict regulations, to let teachers have more voice in the arrangement of their time tables, to trust less and less to annual examinations, to foster education in the true sense, with a view to the requirements of localities and the best interests of the children. As to the status of teachers, Government has made a beginning, so far as its teachers are concerned, by raising slightly the pay of the worst paid, but there is still a great deal more to be done if we are to attract the men we want, as I have urged in a special report; while as to Aided Schools, I see no hope of improvement until salaries are raised and a pension scheme started. To effect these two purposes I should like to see fees resolutely increased and the opening of new schools postponed. The mere teaching of so many thousand children is of small importance compared to the question of *how* they are taught; and, therefore, I have not for the moment given a place in my theory for the future to a large numerical increase in schools, because I do not think this should be aimed at or desired until we have gone a good deal further in ensuring efficiency in those we possess.

XII.—WAYS AND MEANS.

It is very difficult to find satisfactory answers to such questions as—Does the Colony spend as much upon education as it ought to? By what considerations ought that expenditure to be regulated, and what ought to be the ratio of increase? Does it spend as much as other countries similarly situated? Does it get a good return for such money as it spends? If the sum allowed is insufficient, how should the balance necessary be raised? They are questions that are receiving very earnest consideration at the hands of Government. In his speech at the opening of Council this year His Excellency the Governor remarked that "The unfortunate prevalence amongst the Sinhalese people of serious personal assaults remains the great problem of Criminal Administration. Rigorous prosecution and severity of punishment may bring about a temporary diminution, but there can be no radical improvement until under the ameliorating influence of education and discipline a new generation arises in which the savage instincts of revenge and retaliation have not the complete mastery of reason and humanity."

If education is really doing this for the country, then surely there can be no doubt that the country is getting a good return for such money as it spends. But when we ask whether it should spend more, and whether it spends as much as other countries, we must further inquire, what is a proper expenditure on education, and are there any other countries whose circumstances are so similar to our own as to form a trustworthy analogy?* We do not even know what is the annual total spent upon education in Ceylon. In India this can be ascertained fairly well because the Indian Government demands details from the various Missionary and private bodies engaged in education, which we have never asked for; therefore, though we know what Government spends, we do not know what additional sum is spent by the various Missionary bodies. The present financial facts may be put briefly as follows:—Out of a population of 3,565,954, we may say that about 856,310 are of school-going age.† Of these, 218,479 go to school. Government directly pays for 503 schools, which contain 53,834 scholars. It gives a grant of Rs. 461,206·32, which enables Missionary and other bodies to keep going 1,407 schools, with 129,427 scholars. (As to the cost of the 2,062 private schools, with their 35,218 scholars, we have no knowledge.)

---

* See Appendix 14, page 42.

† In the present Census, from which these figures are taken, "school-going age" means 5 to 15.

The expenditure on these lines has about doubled itself in fifteen years; but this does not prove quite so much as it seems to, for a glance at the table given on page 45 will show that from 1876 to 1886 the expenditure increased very slightly. The failure of coffee and the economies that had to be practised then of course account for this; but it may fairly be questioned whether in our prosperous years the increase had been as generous as the economy was rigorous in time of distress. The total nett expenditure on education during the current year represents about 3·33 per cent. of the total revenue of the Colony. The average cost of each child directly educated by Government is Rs. 5·46 per annum, while Government pays Rs. 3·48 per annum towards the average cost of each child in Aided Schools. Whether this present rate of expenditure is sufficient must, of course be a matter for Government to decide. It would seem that we are face to face with a choice between two policies, either expansion with a considerably increased expenditure, or numerical contraction to ensure efficiency; for I am afraid there can be no doubt that a very considerable number of our existing schools are at the present moment inefficient. Still less doubt is there that there is a very large room for expansion.* The position of affairs in Colombo was alluded to in the last report (see page D 6 in Administration Report for 1900 and Appendix No. 6); and in country parts, though some districts are reasonably well supplied with schools, others certainly are not. Chilaw, for instance, is crying out for more. Mannar, which I visited for the first time this year, is very badly off. Uva is perhaps the worst of all. Supposing it be decided that a policy of expansion is alone worthy of a progressive and prosperous Colony, it lies beyond my province to suggest how the additional funds are to be raised. But there is the more need for the question to be raised, because we shall have before long to consider the question of substituting Government schools for schools run by private associations or individuals, which have had a fair chance, but have not succeeded.

To conclude, then, the watchword of our educational policy should, in my opinion, be *expansion with efficiency*. Elementary rural education should be the chief concern of Government, higher urban and English education of private and Municipal enterprise. It may be early yet for compulsory education, but the chance of elementary education should be placed within the reach of every one. It is the present policy of Government to retire invariably before private effort, but I gave reasons in my report last year (p. 4) why the mere existence of an aided school without a conscience clause by no means necessarily places education within reach of all the neighbourhood. During the last ten years we have only been able to open new schools at the rate of five a year.

XII. A.—SCHOOLS FOR BOER PRISONERS OF WAR.

Under orders from Government I went to the Diyatalawa Camp of Prisoners of War in April to see what aid could be given to the Boer Prisoners of War with regard to a school which they had already started, in quarters assigned by the Commandant, with the aid of funds sent out by a Netherlands Committee. I saw General Roux and the principal manager of the school, found that a supply of reading books, maps, and the ordinary school plant (chalk, blackboard, &c.) would be acceptable, and took steps to have them sent up as soon as possible. As it further appeared that a magic lantern lecture would be acceptable, I again went to the Camp at the end of May and delivered one in the recreation hall, which was densely packed, and I have cause to be grateful for the way in which the lecture was received. I proposed to have it interpreted as I went along, but was assured by General Roux and the school managers that quite sufficient English was understood to make interpretation unnecessary. At the end of the lecture, however, General Roux was good enough to interpret what I had to say about each lantern slide.

When the Urugasmanhandiya Camp was started, a school was established there also at the cost of the Imperial Government, the teaching being in English.

Both these schools were visited by Mr. Harward when he was acting for me at the end of the year, and his reports upon them, which I annex, will be read with interest:—

I.—*Diyataḷawa.*

The school, which is said to number about 400, is held in two long buildings, one of which is fully walled, and the other half walled with open sides. The second of these, in which the lower classes are held, is the best suited for the purpose. The other is very hot, and has not sufficient ventilation.

On the morning of my visit about 300 were present. I was told that the attendance was low that morning, because new hats and other articles were being issued. The classes, in most cases, contained from 30 to 40 men. I was told that in one there were more than 70 when all were present. This is too many. Every class but one had a blackboard; these were being constantly used by the teachers. Written work was being done on slates. The supply of books seemed rather inadequate. Discipline was very good. I saw every indication that work was being carried on with commendable energy, and that those who were present were really anxious to learn. The subjects which I saw being taught were Arithmetic, Reading, Grammar, and Dictation, the last three all in Dutch. The lowest classes were doing simple addition of the most elementary kind; the highest were just going to begin stocks. I set to the highest class a problem, which, though easy, would have produced failures in a class that had not been taught to think. It was done correctly by all but one, and in most cases very rapidly. I asked them whether they would prefer to have the question in English or Dutch. They all said English, and wrote it down correctly from dictation in English.

The work is carried on according to a time table, which is drawn up in a mathematical way and kept in the Commandant's Office. The subjects of instruction are Arithmetic, Reading, Dictation, Grammar, History, and Geography (all these subjects being taught in Dutch), and English. Only two hours in each week are devoted to English. No real progress can be made in this subject unless much more time is devoted to it. About seven hours in the week should be given to it. All the teachers appeared to me to be quite qualified to give instruction in English, and there is no subject which is likely to be of such practical advantage to those attending the school.

It would be useful to the highest classes if their time table were made to include a little drawing and elementary geometry or mensuration.

It was suggested to me in the Camp that the offer of a few prizes would be a help to the work of the school. On this point the opinion of the head master might be consulted. The work certainly deserves encouragement. I would suggest that the following be offered, viz.:—

(1) Senior Arithmetic Prize: open to the first class and other competitors recommended by the head master.
(2) Senior English Prize: open to the first class and other competitors recommended by the head master.
(3) Junior Arithmetic Prize: open to those who had received no education before coming to the Camp.
(4) Junior English Prize: open to those who had learnt no English before coming to the Camp.

The prizes might be awarded on an examination held about the middle or end of February. The head master will probably be willing to undertake a portion of the examining work; I can make provision for the remainder. The Commandant will be the best judge what form the prizes should take. It has been suggested to me that small money prizes of about Rs. 5 each are likely to be most suitable.

II.—*Urugasmanhandiya.*

The school here numbers about 150, and is held in three half walled sheds, which are well adapted for the purpose. It is divided into four classes. The work at present consists entirely of English, Arithmetic, and Geography. There is no time table. I have shown the head master how to draw one up, and I will send at once a Departmental Attendance Register. There is one blackboard, which has only just been received after some weeks' delay on the part of the contractor employed by the Government Stores.

The subjects taught are Arithmetic, Reading, Writing, Dictation, and Grammar (all in English), and Elementary Geography. The last class is learning English from a Vth Reader, and has finished the compound rules in Arithmetic. The reader is too hard for several of the class, but as they are adults, this does not matter very much. At present they have to learn the meaning by translation into Dutch. I heard them all read, and also set them two easy problems in Arithmetic. These were not done very successfully. Both in attainment and in intelligence they are much below the highest class at Diyatalawa. In the other classes the work consists of the same subjects, but is of a more elementary kind. In the lowest class there are several who had received no previous instruction. The discipline was good, and I was much struck with the real desire to learn shown throughout the school.

The following articles are wanted, if the work is to be carried on in an efficient manner:—

3 Blackboards.	200 Copy books.
1 Box of crayons.	100 Exercise books.
Wall Maps of Africa, Europe, and England.	50 Drawing pencils (HB).
50 Elementary Readers.	30 Drawing books.
50 Elementary English Grammars.	30 Pieces of indiarubber.
50 Slates.	

I shall write officially and request Government to authorize the Treasurer to make me a sufficient advance to provide for the purchase of these. The blackboards and maps can be returned to this Department and utilized for Government Schools.

I should recommend that four prizes should be offered, one for each of the four classes, on an examination in the following subjects:—

Arithmetic, Reading, Dictation, Composition } in English.

The Assistant Commandant thinks that each prize might consist of Rs. 5. The examination should be fixed for about the middle of February.

XIII.—EDUCATIONAL LECTURES.

A series of educational lectures was started in February with a double object in view: to bring together managers and teachers of different denominations and officers of the Department on common ground, and to place modern methods and ideas within reach of all who are engaged in education. For it is proposed to publish the lectures, when the course is complete, as a cheap handbook for teachers, special attention having been directed by each lecturer to the local difficulties that have to be grappled with. The lectures were well attended, and often led to interesting discussions. Their object will have been fully obtained, if they succeed in improving some at least of the antiquated methods and ideas of which the children of Ceylon are at present the uncomplaining victims. A syllabus of the lectures is given in the Appendix.*

* See Appendix No. 5.

XIV.—INSPECTING STAFF.

The work of the Educational Department must necessarily increase as the population increases and sometimes at a still faster rate when various circumstances combine to accelerate the progress. Unfortunately the Inspecting Staff, on which the whole success of the machinery depends, is not proportionately increased. I have been allowed during the year to permanently add one to the staff of Sub-Inspectors; but the difference is really slight as it has been necessary for some time past to employ an extra man as a temporary arrangement. The work to be done by the Inspecting Staff has increased in two ways: the number of scholars attending our schools has doubled itself in fifteen years (every scholar, under our old-fashioned system, meaning an increase of work to the Inspector), and the number of examinations and of the candidates attending them has increased enormously. For, as we unfortunately have no Board of Examiners here as in most other places, all the examinations conducted by the Department have to be held by Inspectors and Sub-Inspectors, including the setting of papers, the presiding at the examinations, and the looking over of papers. This is not their proper work at all, and in fact takes them away from it for weeks at a time. I pointed out in my report for last year that it was impossible for our present staff to visit all our schools even twice in the year, whereas the very large majority require more than that, especially now that we are trying to introduce newer methods and more practical ideas; for who can disseminate and foster these, but the Inspecting Staff?

We also want an Inspectress, and I cannot do better than repeat the paragraph on this subject from last year's report, for I adhere to every word of it:—

The Appointment of an Inspectress.

"The returns at the end of this report show how rapidly female education has increased, and what an important subject it is to the community. It naturally involves certain subjects, such as needlework in all female schools and examinations, and in Industrial Schools lace-making, embroidery, dress-making, and cookery, of which the male Inspector (or Director) has very little, or no competent, knowledge. A considerable sum is spent yearly upon passes in these subjects (*e.g.*, dress-making, Rs. 1,460; lace-making, Rs. 6,410; embroidery, Rs. 3,460; and cookery, Rs. 170), and it appeared to me that, apart from other considerations, it would be a good investment if some lady were appointed to the Inspecting Staff competent to pronounce whether the work is being done on right lines, on a level with standards in other countries, and in a right and sensible way. Moreover, among our very best schools must be counted our Vernacular and Anglo-Vernacular Boarding Schools. Government spends more on these than on any other class of schools (*e.g.*, while the average cost to Government per child in all Aided Schools is Rs. 3·48, the average cost per girl in these particular schools is Rs. 18·46), and it is obvious that for many reasons the visit of an Inspectress to these schools would do more good and open up much wider sympathies and confidences than that of an Inspector. Again, there are many subjects which have been rapidly developed elsewhere, but in this country we have not begun to think of, such as kindergarten, physical exercises for girls, music, &c., which certainly cannot be dealt with by our present staff, and can hardly be adequately dealt with without female help. I still venture to hope that such an appointment is only postponed."

We also want a specially trained Inspector of industrial work. We are now spending Rs. 17,260 per annum on grants to Industrial Schools. The trades taught in them are not subjected to any qualified inspection whatever, and we can give no proper answer to the question, Is the public money so devoted being properly spent or wasted? As we now have a capital Technical School with a well-qualified Principal, it seems to me a pity not to hand this important branch of education over to him. It would be possible to get, for the small sum of Rs. 1,000 a year, a qualified person to inspect the Industrial Schools, and thus we could put the whole work on a sensible and reliable basis. At present it is very largely a farce.

The following note is by Mr. Harward (who was acting for me at the end of the year):—

"I feel bound to add that the work of the Department is heavier than it was, and is likely to become heavier still. The present arrangements for the examinations conducted by the Department are not satisfactory, there is not sufficient supervision either of the papers set or of the entering of marks and process of getting out the results of the examination, there is no possibility of scrutinizing the examiners' methods of dealing with papers. It is quite impossible for the Director to do this work, except in the most perfunctory manner."

XV.—A PLETHORA OF EXAMINATIONS.

We suffer, in my opinion, from too many examinations. They are but an inadequate test at the best of times; and their inadequacy, which is now beginning to be recognized in England, is still more patent here, for the retentive memory and adaptability of the Oriental lend themselves easily to cramming up text books. To multiply examinations is to increase the evil, and I would gladly see several of our existing ones abolished and a common test substituted. A proposal was made by me this year to take a first step in this direction by abolishing the greater part of the present Clerical Examination and accepting as candidates for a small special examination only those who had passed the Cambridge Junior in four sections (one English), or the Eighth Standard in a registered English school in four subjects, or the Calcutta or Madras Matriculation Examination.

I hoped that this would lead to similar steps in the case of many other local examinations, but the scheme did not meet with the approval of Government.

XVI.—ENGLISH TEACHERS' CERTIFICATE EXAMINATION.

This important examination was held, as usual, under the superintendence of the Board of Education. A representative and competent body of examiners was appointed, and the papers set were carefully scrutinized by the Collective Board before issue. The results were rather worse than

ever. The reasons are obvious: (1) The want of a Training College; (2) owing to poor pay and no pension or security of tenure the right class of person is not attracted into the profession. As a sample of the results I take the following sentences from the examiners' reports:—

1. *School Management.*—"The papers were very disappointing. Very few of the candidates seem to have had the most rudimentary teaching in the principles of education beyond learning Fitch's book by heart."

2. *English Texts.*—"The chief defects are faulty English and mistakes in spelling. Not a single candidate was able to send up a successful paraphrase."

3. *Grammar.*—"None of the candidates showed sufficient knowledge of English idiom to justify their being placed in charge of an English High School..... The knowledge of English idiom is the weakest point; 27 out of 67 have failed entirely in this respect. It is no exaggeration to say that these candidates know no English at all."

4. *Geography.*—"I certainly expected the spelling, the punctuation, the English, and handwriting to be better than they were.....; they appear to me depressing, when it is remembered that these candidates have probably gone through a complete course of local schooling, and are asking to be considered permanently qualified to teach English. A more telling argument in favour of training colleges than this section of the examination affords I can hardly imagine."

5. *History.*—"Only two of the candidates for second class certificates sent in really good papers..... The language of the answers was in many cases extremely ungrammatical..... The papers of the candidates for third class certificates were much poorer, and their English was as bad as it could be."

6. *Arithmetic, Second Class.*—"Seven papers were examined. Only two were done fairly. The rest are failures..... The chief impression left is that even where there is accuracy of solution there is lack of ability to express argument and explain methods."

Third Class.—"The work is most disappointing..... The candidates seem to be satisfied if they can only figure their way through to the result. It does not seem to dawn upon them that they are writing for another to follow their thought. It is lamentable to find such utter disregard of method."

What, then, is being done to improve this very discouraging state of things? Most important of all, a Training College has been sanctioned, and if justification were required for the expenditure involved, surely these examination results would supply it. Secondly, each examiner was asked to send in a report. These reports, together with the papers set, were printed and sent round to all managers. Thirdly, the oral examination in reading, school management, and class teaching was presided over by the Right Rev. the Bishop of Colombo, the Senior Inspector of Schools, and myself. As this is perhaps the most important part of the whole examination, and has hitherto had very insufficient attention paid to it, I took copious notes, and embodied them in a long memorandum giving reasons for the various failures and hints for the future, which was printed and widely distributed to managers and teachers.

But the question of raising the pay and pension prospects (and thereby the status and quality) of the teacher still remains, and is a very difficult one. The solution is, as I have said before, to be found in (1) the steady raising of fees; (2) reduction in the number of schools in order to secure extra funds for increased pay and pension.

XVII.—THE TRAINING OF TEACHERS.

Last year I brought out as clearly as I could the urgency of our needs in this direction, and I rejoice to say that a start has at last been made, and that Government decided at the end of this year to start a Training College for English teachers under a principal to be imported from England. It is to be a day Training College, and its *locale* will be the Agricultural School, where the small Government Vernacular Training College is already situated. I do not hesitate to predict that this will become an institution of considerable size and utility. The English Department will of course be entirely for grant-in-aid teachers, as Government has no English schools; but I very much hope that the Vernacular Department, which is at present confined to Government teachers, will be largely availed of by grant-in-aid teachers as well. I am not on the whole impressed with what I have seen of Grant-in-Aid Vernacular Training Schools. Their shortcomings are chiefly due to want of funds and consequent want of a duly trained and adequate staff, and many managers will agree with me in lamenting that it is so. At the Government Vernacular Training School we have a well-paid staff, an excellent building and appliances, and facilities for constant supervision. We would charge no fees for tuition. A good practising school is attached, where drill can be thoroughly learnt, there is a small gymnasium and cricket ground, and all the pupils attend the drawing school twice a week. The place only wants utilizing, and by co-operation we can do a great deal more than by isolated efforts. Between the English and the Vernacular Training Colleges I hope to establish as soon as possible an Anglo-Vernacular Training College. It is difficult to exaggerate the importance of our Anglo-Vernacular Schools, and I trust they will increase rather than diminish in number, for in my opinion it is *through the vernacular* that English can be best taught. Yet at present we have no training school of any kind, Government or Grant-in-Aid, which devotes its attention to training teachers for this important and difficult work. But with an experienced principal at the head of the whole institution it will not be difficult to dovetail in an Anglo-Vernacular class, to which both Government and grant-in-aid teachers can seek admission.

I am glad to say that Government has allowed me to practically double the number of students at one of the two Government Vernacular Training Colleges from January 1, 1902. Up to the present we have had only five students in each college going through a two-year course. In future we shall have five additional students at the Colombo college going through a one-year course every other year, which course brings with it certain privileges, though less complete of course than those attaching to pupils who go through the whole (two-year) course. This, I think, is a step in the right direction, for we shall make no real progress in any direction until we largely increase our number of trained teachers.

XVIII.—SCHOOL GARDENS.

The School of Agriculture was closed in March. It is unnecessary to dwell on the causes which led to its want of success, but that such meritorious failures have not been unknown elsewhere will be apparent from the Appendix.* In its place there has been started a scheme for the development of School Gardens, which may do very useful work if time and encouragement are given to it. Mr. Drieberg, hitherto Superintendent, Agricultural School, was placed in charge as Superintendent, School Gardens, and the scheme is that he should inspect personally all schools which are reported by the Inspectors to have sufficient or obtainable land around them for the purpose, and keep a full record of their possibilities, selecting some six of the most favourably circumstanced in each Province to turn into model gardens of the first order. Many other schools with less land or worse soil will be placed in the second order; and no school with any possibilities, however small, will be neglected altogether. Each model garden is to become a centre for new ideas, new methods, new products; each teacher is to keep a careful record and register and cash book. Mr. Drieberg has also started a large stock garden in Colombo for the supply of the various school gardens and for the instruction of outlying teachers, who have begun to come to it freely. However serious the difficulties of teaching agriculture have proved to be, vegetable-growing is on a different footing. It is a matter on which natives are quite prepared to be instructed, and it is a matter of primary importance to the native dietary. The schoolmaster, who is to be the prime mover in the matter, is usually a respected resident in the village. The school boys are encouraged to do all the necessary work in the gardens, they are to be given a share in any profits there may be, and are very ready to take new vegetable products home with them to their gardens and chenas. Our school education will thus acquire a thoroughly practical side, and will not consist merely of book-learning. But after such a long period of neglect, immediate results must not be looked for. It must take at least three years to place the scheme on a really sound and comprehensive footing. For a more detailed report on the scheme see page 22.

I am very glad to be able to add that our small attempt has already had its effect, for the energetic Principal of St. Benedict's College, Colombo (with 708 boys on its list), has recently started a system of school gardening there, which I inspected with great interest, and hope is the forerunner of many similar attempts among Aided Schools.

XIX.—SCHOOL TREATS AND PRIZES.

The excellent plan of collecting all the Government school children of a district once a year for a school feast, which was started by Mr. Wace many years ago in Kegalla, has at last borne fruit. It has hitherto been confined to the Ratnapura and Kegalla Districts, where Mr. Wace's successors, aided by the Ratemahatmayas, have given a great deal of time and trouble towards the success of the annual event. This year for the first time a similar effort was made at Matara, owing to the energy of Mr. Hill, Assistant Government Agent, and was a brilliant success. 590 children were present, and their unlimited enjoyment of the many prizes and attractions prepared for them must surely have been some reward to those on whom the trouble of preparation fell. I dwell on the fact because it is generally too apparent how very little trouble we take to attract or reward the children who attend our 500 Government Schools. We punish the children if they are naughty, we punish the parents who do not send them, and are then content to think that we have done enough to encourage education. After all there are other incentives besides the rod and the fine, as the Missionary knows well enough, for there is probably not an Aided School in the Island which has not its yearly treat and its rewards for good conduct, good attendance, good learning. It seems to me a very serious blot on our system that we do absolutely nothing in our 500 schools, among our 53,834 children, to encourage by rewards such qualities as these, so important to them now, so much more important to them as results later on, and therefore to the community of which they will then be members. A few instances of individual effort on the part of schoolmasters are given in the Appendix,† but these are very rare; everything in official Ceylon waits for the Government initiative. It would take but a small sum to procure a simple prize or two for each school, the presentation of which (being Government prizes) would form a nucleus for a small annual function, and an incentive to parents and local philanthropists to add similar signs of encouragement.

XX.—VISITS TO MUSEUM.

An effort has been made to vary the dull monotony of school curricula by allowing visits to the Museum to count as school time under the conditions shown in the Appendix.‡ It is hoped that teachers will gradually come to take advantage of this, and will so be led to encourage their pupils to form school museums of their own. A promising start in this latter direction has been made at Kingswood, Kandy; at the Uva Collegiate School, Badulla; and by the teacher of the Government School at Weuda.§ There is no reason why almost every school in Ceylon should not have its collection of interesting objects; a little encouragement from Inspectors and managers would very soon bring out the latent instinct to observe and to collect.

XXI.—DRAWING.

The scheme for the introduction of drawing into our schools was finally approved of by Government in July, and this year the drawing school was started under the superintendence of Mr. Bartlam in a temporary building at the Technical College. The details of the scheme have been fully published, and appear as an Appendix to the Code for 1901; it will be sufficient to say here that the main object is to induce as many schools as possible to take up this important subject by offering

---

* See Appendix No. 6.
† See Appendix Nos. 7 and 8.
‡ See Appendix No. 9.
§ See Appendix No. 10.

a respectable grant for results, and by leaving the subject optional, but manageable, *i.e.*, the teacher is left to use his own discretion as to what stage each pupil shall be presented in, irrespective of standards. Considering the newness of the subject it is satisfactory to find that the numbers attending the various classes were as follows :—

Class A	...	...	32	Class D	...	...	8
Class B	...	...	15	Class E (boys)	...	...	5
Class C	...	...	4	Class E (girls)	...	...	2

It is of course hoped that Mr. Bartlam will before long be able to hold classes in Kandy and Galle and to train a certain number of teachers sufficiently to enable them to hold classes for other teachers in their various centres. For it is difficult to over-estimate the importance of the subject. Apart from the claims of the art itself, successful object lesson teaching depends almost entirely on the power of illustrating freely on the blackboard, and it is to object lessons that we look for a complete change in our antiquated methods of dealing with the primary and middle standards.

Mr. Bartlam thinks well of the aptitude of his pupils and of the progress they have made up to the end of the current year, and finds useful characteristics in their power of imitation and lightness of touch. It is earnestly to be hoped that as many teachers as possible will be sent by managers to be trained now that the class hours have been adjusted so as to cause as little inconvenience as possible. The pupils from the Government Training School have attended regularly, and two out of the five showed special aptitude. This school is to have ten students next year instead of five ; and these will be the first Government teachers to go through a full two-year course in drawing. This constitutes a further step in freeing our system from the charge of fostering mere book-learning.

XXII.—INDUSTRIAL SCHOOLS.

There are at present thirty-five Industrial Schools scattered over the country, of which twelve are boys' schools, eighteen girls' schools, and five mixed. They earn a grant of Rs. 17,260 per annum, and deal with some 1,855 children. The grant consists of a payment of Rs. 10 on behalf of each child who passes an examination in terms of our schedule for Industrial Schools. The object in view is to teach poor children a trade whereby they can earn a livelihood when they leave school. The trades taught are (for girls) dress-making, cookery, lace-making, and embroidery ; (for boys) tailoring, shoemaking, carpentry, printing, bookbinding, blacksmith's work. Of these, lace-making for girls and carpentry for boys are far the most popular, absorbing between them about 1,000 children out of the 1,855, while embroidery and bookbinding take about 500 more, thus leaving very few indeed for the other trades.

The idea sounds excellent, unfortunately its realization leaves much to be desired. In the first place, it was introduced red hot from England, at a time when it was thought that every successful effort in England was necessarily applicable to an Eastern country—a fallacy which a rather painful and costly experience has enabled us to detect. This accounts for the fact that cookery and dress-making are put down very early in the list of subjects, and no doubt they seemed most civilized and advanced when the scheme was first mooted ; but it does not require much knowledge of the East to perceive that two more ridiculous "trades" could hardly have been selected for girls. Women cooks are practically unknown and impossible, every woman and girl is an excellent cook up to her means and for her requirements, and has nothing to learn at school on that subject ; while, when the dress of Eastern women is considered, it is obvious that "dress-making" must either be largely a farce or a deliberate attempt to introduce Western garments to Eastern bodies—a lamentable crusade indeed ! I have dwelt a little upon this point because it is an excellent example of the class of effort that does, on the whole, more harm than good. It is thus obvious that the girls are thrown mostly upon lace-making and embroidery, of which only the first can in any sense be called a trade. There is something to be said for it. It is a long-established industry, the girls take to it readily, the grant is easily earned (I do not think I have met with a failure in two years), the lace made commands a ready sale, the plant required is inexpensive. But there are some serious objections. I doubt whether much good is done by teaching it in school. Those girls who wish to take to it afterwards as a trade can and do learn all there is to learn from their mothers, sisters, or neighbours at home. Those who do not wish to take to it as a trade gain nothing whatever. For there is no real teaching involved in it, no progressive ideas, no originality ; simply a mechanical use of pins and prepared patterns. These patterns are often of a very inferior type. The cotton used is not always above reproach ; the prices which most of the work commands are, as a rule, starvation prices.

Embroidery may be dismissed in far fewer words. It does not even lead to a "trade," for not even the most obliging of markets would absorb the gaudy horrors that are often turned out under its name ; it is practically useless for the purposes of native dress, and has little that is artistic or educational to recommend it. We insist on two trades being taken up in a girls' industrial school, and this is the only second trade available in most cases. It is thus evident that the present state of girls' industrial schools leaves much to be desired, but I see no prospect of really useful reforms until the help of qualified ladies can be obtained to advise and supervise. Our primary want in fact is an Inspectress.*

In Industrial Schools for boys there is certainly more variety, as there are no less than six "trades" they can choose from. But unfortunately caste notions step in and nullify the success of this tempting ideal. In consequence shoemaking and ironwork attract only 46 boys out of 524, tailoring only 88. Nearly half the boys take up carpentry, this being a fairly cheap industry for managers to install ; but I am afraid that if a strict inquiry were made as to the number of boys who have taken up carpentry for a livelihood in after life, the number would be infinitesimal. In the case of a large school where I instituted such an inquiry I could not satisfy myself that there were more than two or three. The better-born boys look upon it as degrading, those who are destined to take to it as a hereditary livelihood learn a great deal more at home than at school. As usual, it is an English idea misapplied (and, indeed, abandoned in England some time ago in favour of hand and eye

* See page 11.

training, which is a very different thing). Moreover, our present system is hopelessly faulty in two particulars; we do not stipulate for any qualifications on the part of the instructors (an almost incredible fact), and we provide no skilled inspection whatever. Consequently the present waste of money and effort need hardly be enlarged upon further, and must exist until a skilled Inspector is provided.

Printing and bookbinding are the two most promising trades, subject to the objections just quoted, for there are no social reasons against them, and they present an increasing chance of employment. Unfortunately printing machines are expensive and managers are poor, and as the Government grant is a hard and fast one of Rs. 10 per head whatever the trade (obviously a great mistake), there is but little temptation to undergo the cost.

Reorganization therefore is urgently wanted in Industrial Schools, but unfortunately reorganization costs money, which, I am told, Government does not at present see its way to provide. It might take one of two forms. The cheaper plan would be to continue on our present lines so far as the work done by the boys is concerned, insisting at the same time on properly qualified teachers and providing skilled inspection, placing the whole organization under the Superintendent of the Technical College, and so making these Industrial Schools to some extent a training ground for that College, and greatly increasing the value and interest of their work. I proposed a scheme of this kind, which would only have cost an extra expenditure of Rs. 1,000 (£70) per annum, but it was not accepted, and matters remain as they are. This, as I say, is the cheapest remedy, but it may be asserted with confidence that an expert from Europe would pronounce our present lines to be altogether wrong and antiquated, given up long ago in Europe and replaced by the various methods of hand-and-eye training. To presume that Europe is right in this matter rather than ourselves is not perhaps a very violent supposition; but we have nobody in the Island competent to introduce the newer methods, we should have to import an expert, anyhow for a time, and it may be feared that the question of funds would ensure a prompt negative for such a suggestion.

XXIII.—DRILL AND PHYSICAL EXERCISES.

The progress made throughout the year has been decidedly satisfactory so far as our Government schools are concerned, considering the difficulties of the position. For it is a simple thing to introduce drill into a school in England or the continent, where soldiers and sailors are about and well known tunes are to hand; it is a very different thing in isolated Eastern villages, where the whole idea is alien, and the teacher has never even seen good drill himself We have gone on the lines that physical exercises are more important than mere drill; that both should be as much diversified and made as interesting as possible, so that they may give pleasure to the children instead of boring them; and that the time so spent forms a very important, and not a merely subsidiary, part of the curriculum. The book used is a translation of "Chesterton." All words of command in vernacular schools are now given in the vernacular (for there was a strong tendency towards English words of command, often properly understood neither by teacher nor by pupils). Boys are arranged according to size, not standards, and into two, three, or four main divisions. If a teacher shows himself particularly backward in his drill, either he or one of his staff is sent to the nearest school where drill is satisfactory for such period as may be necessary. I invariably inspect the drill myself, and it forms an important part of the Inspector's yearly examination.

In Government Girls' Schools very little is done, nor am I inclined to press for more. These schools are all in the country, the idea is entirely novel to the girls and their parents, and it would be a great mistake to force it unduly.

In Aided Schools decided progress is being made, especially in the towns and large villages. In several of these schools the drill is quite above the average, and in many of the large girls' schools excellent work is shown both to me on my visits and at the yearly prize giving. We offered last year a small bonus to the teachers of all Aided Vernacular Boys' Schools who presented an adequate display of drill and physical exercises. This has had its effect, and I hope the bonus will shortly be extended to all Aided Schools.

The Royal College and four of our most important Aided Schools have Volunteer Corps of varying size, which have been kept up, in spite of many difficulties and discouragements; by the various principals, because they saw the extreme importance of this side of school life. I have this year laid a scheme before Government for combining these various and independent corps into one Cadet Corps, asking Government to supply arms and uniform. The boys will be allowed to shoot at the range when of a certain age and standard, and will have a place at all general parades. It is hoped that this will have a double effect: it will encourage boys to join the Cadet Corps, whereas at present there is but little enthusiasm about the school corps; and this corps will form a useful training ground for the adult Volunteer Corps.

I make no apology for dwelling at some length on this subject. It seems to me difficult to overrate its importance. If education is to do its whole task, it must surely care for the body as well as the mind, and teach discipline and duty as well as Latin and Greek. For its work is concerned not only with the school boys of the present, but with the citizens of the future.

XXIV.—EDUCATIONAL LIBRARY.

The existence of our library is beginning to be felt and appreciated, and it is fairly well made use of by the managers, principals, and masters of schools and colleges. It was started in the year 1900 with a view to placing at the disposal of those engaged in the work of teaching, free of any charge, a variety of such recent publications as have an educational bearing and interest. Though there is still accommodation for more books, the library has at present quite a considerable number of volumes representing most branches of education.

The schoolmasters are also allowed the privilege of removing books and keeping them for a fortnight. The library is open to readers daily from 10 A.M. to 4 P.M. and on Saturdays till 2 P.M. This is so far the only library of its kind in Ceylon, and its usefulness to schoolmasters and others generally interested in education will, it is hoped, gradually increase.

XXV.—THE GOVERNMENT DAIRY.

In June the connection between my Department and the Government Dairy was finally closed. The connection was always a trifle artificial, the argument apparently being that because the Director of Public Instruction has to do with schools, therefore he should supervise a School of Agriculture, to which shall be attached a Government Dairy, because there is nothing else to attach it to. But it does not follow that a Director of Public Instruction has much precious knowledge to give to the purchase of cows or the analysis of milk. The Dairy, which has been a remarkable success, and has helped to introduce into the Island an excellent and valuable breed of cows, has been handed over to the Government Veterinary Surgeon, into whose Department it more naturally falls.

XXVI.—THE DEATH OF HER MAJESTY QUEEN VICTORIA.

The Circular which was issued to all Government Schools on the occasion of Her Majesty's death is given in the Appendix.* It was of course sent only to Government Schools, but I should convey a very wrong impression if I left it to be supposed that mourning was confined only to those schools. My impression is, from what I heard and saw, that there was hardly a school in the Island which did not give very touching proofs of sympathy with the rest of the Empire in the common sorrow.

XXVII.—GANSABHAWA SCHOOLS.

There are twenty of these schools in the Tamankaduwa District of the North-Central Province with an average annual attendance of 54 children in each school. The number of teachers employed in these schools is at present twenty. The education imparted is in the vernacular, and is of a purely elementary character. The present mode of paying the salaries of these teachers is quite of a novel kind, and will no doubt stimulate them to further exertion in persuading and encouraging the parents of children scattered in this remote part of the Island, who have not yet fully begun to appreciate the value of education, to regularly send their children to school. A teacher is paid at the rate of 25 cents per mensem for each child attending school. The salaries will therefore increase proportionately with the increase in the number of pupils. It is impossible to expect to find qualified teachers who are willing to accept appointments in such remote and often unhealthy parts of the Island unless some such encouragement is afforded them. The expense of maintaining these schools is met both from Gansabhawa funds and the Government donation of Rs. 1,000 per annum.

In reference to paragraph 8 (page D 6) of my last year's report I now print the following letter, so as to make the very instructive story of educational development in Tamankaduwa continuous:—

The GOVERNMENT AGENT, North-Central Province, to the DIRECTOR OF PUBLIC INSTRUCTION.

SIR,—I HAVE the honour to annex a statement (A) showing how the Government grant of Rs. 1,000 has been spent this year on account of the above schools, and to request the favour of a renewal of the grant for next year.

2. I may point out that owing to the necessity for providing furniture, stationery, books, &c., for the schools during the first year of the grant, the Gansabhawa funds have had to bear almost the whole cost of the salaries of the teachers, and will by the end of the year have spent some Rs. 1,700 on the schools, as is shown by the annexed Statement B.

3. The Village Tribunal funds cannot stand this strain every year, and I hope next year to devote the greater part of the grant towards paying the teachers.

I am, &c.,
L. W. BOOTH,
Government Agent.

Statement A.

Government Grant.

XXVIII.—INFANT TEACHING.

Perhaps the most serious blot upon our present system is that we have done nothing so far to develop infant teaching. The fact would hardly be credible to any one coming from Europe, where such great and increasing importance is attached to it. India, too, is waking up to her backwardness in this direction, and a very interesting scheme of reform has been drawn up by the Government of Bengal, which is not only an effort towards adopting European kindergarten ideas to Oriental requirements, but also changes very largely the stereotyped curricula in all the standards. In theory the scheme sounds excellent: the difficulty of course must be to instruct existing teachers in the new methods. It is hoped that this will be effected in India by a series of manuals now in course of preparation, and by forming classes at various centres where existing teachers within reach can get a certain amount of training from experts, and on their return to their schools be competent to give instruction to others further away. Even so there will be many difficulties in the way of rapid progress, and much conservative clinging to antiquated methods; but India has the great advantage of possessing already a certain number of trained teachers in kindergarten, while we have none. The manuals to be published in India will no doubt be of use to us, but very little can really be done until we import at least one expert who can start classes in Colombo, from which trained pupils can be sent to other districts. This of course means a small extra expenditure, and no funds are available, so that for the present we must be content to lament the fact that infant teaching has not yet commenced in Ceylon, although its importance is being increasingly recognized in most other countries.

XXIX.—MR. VAN CUYLENBURG'S REPORT ON EDUCATION IN THE MADRAS PRESIDENCY.

Mr. A. van Cuylenburg, the Senior Inspector of Schools, was sent by Government to the Madras Presidency at the end of 1900 to report on the educational system in vogue there and returned in January. His report has since been published as a Sessional Paper, and raises the following questions, of the first importance to us locally:—(1) Is it not high time that our Municipalities and Local Boards undertook a duty (that of contributing considerably towards education) which is thrown upon them throughout India? (2) To what extent should examination by results be abolished? (3) Are we not culpably neglecting infant teaching, whether by kindergarten or other methods, and thereby falling terribly behind other nations? (4) Is the pressing need for a training school for English teachers sufficiently recognized? (5) Is sufficient attention paid to drill and physical exercises? (6) Are our Industrial Schools worth the money spent on them unless qualified inspection is provided? (7) Should not our Inspectors be set free to "inspect" instead of having to give up a large proportion of their time to general examinations?

My own answers to these very important questions have been laid fully before Government. I would only say here that in my humble opinion the experience Mr. Van Cuylenburg has gained and the instructive report he has provided us with are a good and adequate return for the cost of the trip (Rs. 300), and I sincerely hope that this idea will be repeated, for each of our Inspectors would benefit of necessity by such possibilities of comparison and instruction, and we should gladly welcome and profit by similar reports on other parts of India, on Burma, and on the Straits Settlements. This is surely the best way of counteracting merely parochial views of education.

XXX.—THE NEW SYSTEM OF INSPECTION AS APPLIED TO VERNACULAR GOVERNMENT SCHOOLS.

(1) *By Mr. A. van Cuylenburg, Inspector of Schools, Western Province.*

As a first step in the introduction into our schools of the new system of inspection instead of examination, six of the largest and best taught vernacular schools in my district have been exempted from the annual examination. The change was so sudden, and involved such a complete departure from time-honoured methods, that it was some time before the teachers were able to realize the new responsibility thrust upon them. Accustomed by long years of dependence simply to the carrying out of methods of work devised for them by those in authority over them, the helplessness with which the new position was for some time faced was inevitable. Such advice and assistance as I was able to give soon helped them, however, to overcome this feeling, and every teacher is now keen in his appreciation of the freedom secured for him under the new system, and is doing his best to adapt himself to the new conditions, especially by the abandonment of the mechanical methods of teaching that had hitherto held him in such thrall.

My efforts, too, in their behalf have been directed almost exclusively to impressing the conviction upon them that, in teaching, results are now considered of less importance than methods; and with this object in view I have, in conference with them, drawn out for their guidance syllabuses for the several subjects of instruction less burdened with details than before, but affording more scope for intelligent teaching than was the case hitherto.

In the classification of scholars, the unwieldy division into eight standards has given way to four or five forms, convenient for management as necessitated by the size and advanced condition of each school; and the long-neglected "Alphabet Class" has been organized practically into an

infant department, worked on the new syllabus for the instruction of that class issued by the Department.

In the upper forms the Sinhalese classics have taken the place of the Departmental Seventh and Eighth Standard Readers, the Primary Readers being used in the forms below. Recitation is taught throughout the school. Practical composition, commencing with the construction of sentences, finds a place in the new syllabus at a much earlier stage than before, and grammar is taught along with it only so far as it can be made ancillary to that subject. The teaching of arithmetic makes some approach to the new syllabus for English schools adopted by our Board of Education, with the important difference that in these schools vulgar fractions come immediately after the simple rules. In higher arithmetic, elementary mensuration takes the place of discount, compound interest, and such rules as are practically of no use to the village lad. The teaching of geography has been thoroughly re-cast, and makes as near an approach as our circumstances will permit to the intelligent and educative methods of teaching that subject now in force in all civilized countries.

Object lessons have for the present been restricted to the infant department, and will be carried on, in continuation of the instruction already given, with the promotion of these "infants" into the standards. The restriction of these lessons for the present to the class where the foundation has to be laid has occurred both to the teachers concerned and to myself as perhaps, for us, the best method of making a new departure. Lessons on form and colour are also given in this department, and the drawing of simple leaves from the object itself and from memory has formed the nearest elementary introduction to the training of the hand and the eye that we have till now been able to provide. It has not been found possible to press into our scheme just now any occupations for these infants. All concerned are new to their work, and it has therefore been thought wise to hasten slowly. A commencement is, however, to be made with modelling, plaiting, building with bricks, &c., when a year's experience has brought with it the courage and the confidence necessary for undertaking the more ambitious aspects of the new scheme of instruction.

A corresponding advance in method characterizes the teaching of arithmetic to the infant department in these six schools. The old arbitrary system of teaching counting and numbers by rote has given way altogether to illustration by concrete objects. In teaching a number, the children are made, with the aid of concrete objects, to see its various combinations, that is, to find out in how many ways it is made up, and to apply to it the four simple arithmetical processes which can be dealt with through it. No number is accepted as thoroughly understood by the child until he can deal with it in this way, and also is able by the use of concrete objects to show how his results are obtained. Within the last three months Blackie's "Vivid Arithmetic Sheets for Number laying" have been used with much effect in these schools, and so far as my own knowledge of the work done goes the children were able some months back to deal in this way with numbers up to 10, answering orally questions involving the application of all the four rules to them. This is an advance in the teaching of arithmetic truly phenomenal in this country. Finger-counting has, under this system, completely disappeared. The alphabet class will not study higher numbers than 20 under this system, the higher numbers being reserved for study in the standards. In counting, the children are at present taken as far as 100.

It is now well nigh a year since these six schools have been exempted from the annual examination, and the progress made during this time, especially in the direction of intelligent and methodical teaching, is very encouraging. A much broader view of their work now characterizes the teaching of these men, and every effort is being made in their methods of work to train the children to think for themselves, that is, to use their own brains more than they did before in the acquisition of knowledge, rather than passively to depend upon their teachers for everything they require to know. This has been markedly noticeable in the object lesson teaching given to the infant department, and in the explanation of problems in arithmetic to the older scholars. Where in the former case, before the great aim of the new system was fully realized, the children were made the mere passive recipients of all the information possible on the object under examination, they are now on the contrary, with better and more enlarged views of our new intention, encouraged by skilful questioning, the use of illustrations, &c., to make their own efforts at arriving at their results. Although still far short of excellence, the methods adopted are infinitely more stimulative of thought than ever they were in the earlier days, and give me much ground for the hope that the new departure is a wise one. And it is no small gain to have succeeded in making the teachers feel that it is now left to them to do their work without stress, and that they can dispense with the pressure formerly noticeable during the last few months of the year in view of the examination results and their concomitants, and spread their work out more evenly over the twelve months. Besides, the opportunities for the skilled advice they often feel they need occur to them more frequently now than before, and I have been myself enabled by suggestions and actual teaching to open up to them new views and methods of instruction, which would perhaps never have fallen in their way otherwise. Indeed, the avidity with which my visits were looked forward to for the consideration of points on which my guidance was felt useful gave abundant proof of the birth of a healthier point of view of their position and responsibility as teachers of youth. And this is not a small thing to be grateful for. The system, again, is still in its tentative stage, and much has yet to be done before it can be said to be introduced in all its fulness. For instance, we have not yet introduced any method of examination to test our work. I have, practically, been engaged in teaching, and the teachers in learning from me, the new methods we are desirous of seeing introduced. These methods we may now assume as being fully understood, and we hope next to turn to the consideration of the best tests. Whether those tests should take the form of monthly or terminal examinations by the teachers themselves with the results noted for my inspection, will be decided after conference with the respective teachers; what will remain for me, then, will be the final report on the general efficiency of each school at the end of the school year. As these schools were all exempted from examination in May of last year, that month may be taken for the future as closing their school year, and as the month on which my report is due.

And it must not be omitted to be mentioned that in schools so poorly staffed as ours the burden of all the higher and more responsible work falls upon the principal teacher. Indeed, the new method of teaching the infant departments in these schools had to be worked by the principal teachers chiefly, the assistant teachers being in the majority of cases not sufficiently qualified to be entrusted with work utterly new to them in its objects and methods. It is therefore with no little pleasure that I

bear testimony to the readiness, zeal, and intelligence with which this part of the work was undertaken and performed by the principal teachers of these schools, regardless of the demand made on their time and their strength. The extension of the school day to seven hours in their case was of daily occurrence, the two extra hours being given to the highest forms, whose work was subordinated to that of the infants in the eagerness of these men to work out the new scheme of infant instruction. Indeed, the loyalty with which they co-operated in the introduction of a perfectly revolutionary system is beyond all praise. The working out of this scheme throws all the responsibility on the principal teacher. He has now to be his own examiner, and it is his fingers that have to pick out the weak points in his work. This new responsibility has been fully realized and accepted with a degree of satisfaction, which, I must frankly admit, was unexpected. On the whole, then, I feel that a wise step in advance has been taken, and that the men and the schools selected will justify their choice.

A. VAN CUYLENBURG.

(2) *By Mr. Henry Fernando, Acting Inspector of Schools, Southern Province.*

There are three schools of this category in the Southern Province:—

(1) Bentota Boys' Vernacular.
(2) Bentota Girls' Vernacular.
(3) Talpawila Boys' Vernacular.

The first and the second were, as usual, examined last year by a Sub-Inspector and duly reported upon. The Talpawila school was not so examined; it was frequently visited during the course of the year, and every endeavour made to improve the standard of teaching and raise the tone of the school generally. The teacher is a capable man, and one to whom a school of this class might be safely entrusted. He holds an examination at the end of each term for the purpose of promotions and of testing as much the progress made by each student as the work of his colleagues.

HENRY FERNANDO.

XXXI.—REPORT OF MR. HENRY FERNANDO, ACTING INSPECTOR OF SCHOOLS, SOUTHERN PROVINCE.

I have the honour to submit my report for 1901 on the Government and Grant-in-Aid Schools in the Southern Province.

Personal.

Mr. A. L. Samarawickrema was in charge of the Province till February, when he was relieved by Mr. E. A. Seneviratna. I succeeded Mr. Seneviratna on the 1st August.

My connection with the district has been so short, and the opportunities I have had of gaining a personal knowledge of the schools and teachers so few, that I scarcely feel qualified to express any decided opinion on the different aspects of educational work that have come under my observation. This report will therefore be a mere record of my first impressions.

Assistants.

During the year there were two Sub-Inspectors under me, Mr. Weeresinha and Mr. Blok. The latter was only partially attached to the Southern Province, and the former has been away on sick leave since the end of November. I may be permitted to so far anticipate the reports for 1902 as to allude to the re-distribution, made on my recommendation, of the work of my Assistants. Each officer is henceforth to be stationed in the centre of his district. Mr. Blok for the Galle District in Galle, and Mr. Weeresinha in Matara for the rest of the Province. This arrangement should conduce to the more effective supervision and the more economical examination of vernacular schools.

School Bungalows and Accommodation.

A marked contrast is noticeable between the school bungalows of some districts and those of others, between the flimsy and unsightly structures, for instance, of the Magam pattuwa and Morawak korale and the substantial and well designed buildings in the Weligam korale and Wellaboda pattuwa. The unsatisfactory condition of the former is attributed not to the apathy or neglect of the responsible authorities, but to want of funds at their disposal. Whether the school bungalow is an index to the state of the exchequer of the Village Council I am unable to say, but I understand that a substantial well-built Gansabhawa by the side of a rickety shed doing duty for a school is by no means an uncommon sight. However this may be, some means should speedily be devised of improving the present state of affairs. As it is the teacher has often to carry on his work under most depressing circumstances, and cannot reasonably be expected to devote his undivided attention to school matters. Every school bungalow should, in my opinion, be tiled and paved, if not cemented, and should be whitewashed twice a year. It should be conspicuously the brightest and tidiest building in the village, serving as a model of neatness to the villagers. Placed as he now often is, a child cannot have any respect for cleanliness, and untidy school surroundings are calculated to engender habits which in after years it may be hard to eradicate.

Of late years we have been confronted with another difficulty, that of obtaining the landowners' consent to the enlargement of the existing school-houses where necessary. Such permission has actually been withheld in the case of two of the largest and most efficient schools in the Province, and their progress has consequently been greatly impeded. This should be a warning to Gansabhawas against building on private grounds, and steps should be taken, as early as practicable, to obviate this difficulty by acquiring all such lands by purchase or otherwise. The rule that every school bungalow should be on a plan approved by the Department ought to be strictly enforced, and care taken that in all such plans provision is invariably made for teachers' quarters as well as for school gardens.

School Furniture, &c.

I should wish to see schools provided with benches and desks of smaller size to suit the children of the lowest classes, who have now to put themselves into most uncomfortable postures when writing.

In Government schools the blackboard was generally well kept. Excellent specimens, too, were sometimes found, but these, I am afraid, were kept on exhibition for the benefit of the Inspector. The blackboards in many of the Grant-in-Aid Schools were rather of inferior make and appeared to be neglected. From all that I have observed I have reason to suspect that in most of our vernacular schools, both Government and Grant-in-Aid, this most useful article of school furniture is not utilized as it ought to be, and the idea seems to prevail that it is only helpful where a sum in arithmetic has to be explained to a class.

Maps.

This is an article that ought to serve both for ornament and use, but really serves neither purpose in the great majority of vernacular schools. In some cases the maps are stowed away in a corner of a room covered with the dust of weeks. They are never used except at a geography lesson, and even for that purpose seldom. A teacher might often be seen rushing through the geography lesson with his back to the map, ignoring its existence, but more often he saves it this indignity by leaving it undisturbed in the map box. While it is true that the moist climate of some parts of the Southern Province renders the preservation of maps in good condition difficult, and that the Sinhalese maps, owing to some defect in their get-up, appear to decay far too rapidly, still I am inclined to believe that they often become unserviceable by reason of the teacher's negligence. I would suggest that teachers be required to state in every requisition for a new map the date on which a map of the same kind was last supplied.

School Registers.

As a rule, the Attendance Register appeared to be much better kept than the Admission Register. The prevailing faults in the former were the omission to fill in the summary at the end of the book immediately after the expiration of each month, and in not a few cases the employment of wrong methods in rectifying daily presence or absence marks. In the keeping of the Admission Register great carelessness was noticed in Government as well as in Grant-in-Aid Schools. The progress columns were found in an incomplete state, and very frequently the number of children on the two registers did not tally, due to the practice, evidently very common, of spasmodically bringing the Admission Register up to date. I have warned the teachers against these and other irregularities, but until they are made penal I fear the present laxity will continue.

Time Table.

The time table does not play that part in the organization of our schools and the education of the children which might rightly be expected of it. This is due to the inadequacy of the teaching staff, and where the staff is fairly sufficient, to the want of methodical habits on the part of the teachers. The average teacher begins work, not at the appointed time, but when he thinks that all children likely to attend on that day have made their appearance; and the duration of each lesson often depends, even in schools where there is a timepiece, rather on the interest felt on the subject by the teacher than on the time assigned to it in the time table. When the Inspector is present a teacher is observed to repeatedly consult his watch and time table alternately, plainly indicating thereby his lack of acquaintance with the latter. Its great educative value is completely lost sight of in most vernacular and in perhaps some English schools, attributable either to the teacher's ignorance or his indifferent appreciation of the extent to which it might be applied in inculcating habits of promptitude and regularity in a boy.

A small hand bell should be of great service, especially in large schools, in maintaining discipline, and I should also wish to see some of the schools, at least those in the outlying districts, provided with timepieces.

Attendance.

Even in countries far more advanced than Ceylon is, irregular attendance of children at school is a great obstacle to the progress of education. What has to be contended against is not the absence of hearty co-operation or even the passive indifference, but the active opposition of parents, often coupled with the apathy of minor headmen, who are charged with the duties of attendance officers. The headman as an attendance officer has proved a failure, and until we have officers of our own, paid by and amenable to the Department, it is useless to hope for much improvement in this direction. If, as I have suggested elsewhere, it could be arranged to have a certain portion of the Gansabhawa funds paid in annually to the Education Department for the upkeep and erection of Government School bungalows, these stipendiary attendance officers might also be entrusted with their oversight. The sooner the present dual control and divided responsibility is put an end to, the better for all concerned.

The teachers themselves should endeavour to make school life as attractive as possible to children. The curriculum of school studies, of course, affords in itself little or no attraction to the average boy, but to an intelligent teacher would occur several ways of making the five hours spent in school agreeable to the pupil. It also seems to me that by holding at convenient centres magic lantern exhibitions, and by such other expedients as are had recourse to in other countries for the benefit of boys whose attendance has been regular, the attendance at schools might be appreciably improved.

In this connection I would also venture to point out that if the object of the Gansabhawa rule regarding compulsory attendance at school of all children up to their thirteenth year is the abolition of ignorance, it does not accomplish its purpose. The villager not seldom succeeds in defeating it and at the same time escaping punishment by sending his child to school for a couple of months each year, little caring what progress he makes. A boy now leaves from the Second or Third Standard, having scarcely mastered the mechanical acquirements of the three R's and with a stock of learning of the least possible service to him. With a view to prevent such an evasion of the law, I would submit the expediency of amending the Ordinance so as to make it compulsory for a child to attend school until he has passed the Fourth Standard.

Teachers.

The Government teachers in the Southern Province have not, I think, been distributed to the best advantage. We have not, for instance, acted conformably to the rules that have been laid down for the observance of grant-in-aid school managers on the subject. I do not, however, advocate the discontinuance of uncertificated Government teachers who have been in service for some time, and who are giving satisfaction, but we might be more consistent in the employment of those that are certificated, and avoid the anomaly of having second class and even third class men in charge of large middle schools; while first class certificated teachers, with comparatively high pay, greater experience, and superior attainments, are relegated to insignificant village schools with a paltry attendance.

Then, there is the question of adequately officering the large English and vernacular schools established a couple of years ago. They are still in their infancy, and if they are to have a fair trial, they should be provided with a staff of competent teachers. The head teacher of a school of this class is, as a rule, a man of experience and ability, and I would suggest that he be allowed two assistants holding second class certificates (one of them being, if possible, a trained teacher), and that his third assistant, where he has one, should be a passed monitor, who, after serving an apprenticeship of one year there, could with advantage be placed in independent charge of a school. These schools will then serve a double purpose quite apart from their own intrinsic usefulness, they will serve as models to the other schools and also annually turn out a man well qualified for a head teachership. But the difficulty is to attract and retain good men; for, according to Departmental rules, assistant teachers, however efficient, are not entitled to increase of pay or result payments. Unless we are prepared to hold out some inducement to the assistants of these schools by way of personal allowances to be attached to them while so employed, it will not be easy to obtain the services of good men.

Teaching.

That the methods of teaching adopted are generally primitive and almost universally defective must be obvious even to a casual observer. A child is treated as the passive recipient of information, right direction is not given to his intelligence, and his faculty of independent observation never trained. If the ways of the vernacular teacher of to-day are antiquated, and if he moves in the same groove as his own master did a generation ago, it is not altogether his fault. In Sinhalese there is no literature on the subject of teaching, there are no periodicals as in English from which the most improved methods of teaching might be learnt, and the visits of the Inspector, whose first duty it is to see that his teachers understand and duly perform their work, are few and far between. The teacher is thus left to his own resources, and little wonder that the instruction imparted is of the most mechanical kind. I propose to issue from time to time, to the teachers of my district, leaflets dealing with subjects of interest to them, such as (*a*) Duties of Teachers; (*b*) What is Discipline, and how to maintain it; (*c*) How each Subject of School Study should be taught, &c. A school magazine properly conducted should prove a powerful standard in raising the standard of teaching in our schools, and would, I doubt not, be found useful to the teachers in many other ways. At the suggestion of Mr. Blok meetings of teachers have been organized, having for their object the improvement of the teaching in vernacular schools. The Inspector presides at these meetings and points out to the teachers the deficiencies disclosed by the last preceding examination, and explains by model lessons and otherwise how they should be best corrected. It is my intention when these meetings have passed their experimental stage, and the teachers are seen to take a lively interest therein, to invite them to read and discuss papers on educational topics. This will be the means, I trust, of creating in them an intelligent interest in their work and a spirit of healthy rivalry. The next step should be to encourage teachers to hold meetings of advanced and old pupils on their own initiative occasionally, so that education might not absolutely cease for those who have left school, and the impressions received in school might not be soon obliterated. I venture to think that these meetings have before them a future of usefulness.

Here I ought to record the indebtedness of the Department and teachers of English schools in Galle to the Rev. M. J. Burrows and the Rev. J. H. Darrell for the course of model lessons they have provided. The Rev. Mr. Darrell himself gave a most admirable lesson in Arithmetic—How to teach Fractions. This was followed by a lecture on Reading by the Director of Public Instruction, and a model lesson in Reading by the Acting Inspector of Schools.

Discipline.

To the average teacher this means little. By discipline he understands nothing more than "Orderliness," and its object, in his view, is to enable him to carry on his work without disturbance. This, though unquestionably one of its important aspects, is not all. Besides, even this orderliness would seem to be often secured by methods open to serious objection. There is inherent in the Ceylon village lad, as in most Eastern countries, a great regard, amounting to veneration, for the office of teacher, which, in the hands of a man of fair intelligence, ought to be an effective instrument in moulding the character of his pupils. But some teachers, I have observed with regret, take advantage of this trait in the character of his boys to establish a species of military terrorism in school; the teacher, no doubt, secures complete silence, but this silence is forced and unnatural, and injurious to the healthy development of a child's character. I have urged upon teachers the desirability of maintaining discipline by appealing to the honourable instincts of a child and of instilling into his mind the idea that duty should be for duty's sake. They do not realize that discipline could thus be attained, or that there could be anything like honourable instinct in a village child. I have found it almost impossible to make our teachers understand that this physical discipline is less important than, and indeed should lead up to, "mental and moral discipline." Whilst recognizing the importance of the development of the mind and of morals, they fail to see what connection school discipline has with mental and moral development. Nor do they appreciate the great responsibility resting on them, and that the years spent in school regulate the habits of a lifetime. They have to be taught that all this and more belongs to the province of school discipline, and that their aim should be to cultivate in their pupils habits the possession of which will be of more value to them in after life than mere book-learning.

Result Payments.

The present system of payment to teachers on mere results of examination, I submit, exerts a pernicious influence on the teachers and the taught, and has the effect of encouraging cramming. What a teacher not unfrequently does is to rest on his oars until he is within a few months of the annual examination, and then to devote his energies to the coaching of his pupils to answer questions of the type usually set at examinations.

Unfortunately the vernacular examination questions are generally so little varied, and the same questions are sometimes so frequently set, that it is possible for a teacher of experience to succeed with but little exertion in obtaining the required percentage of passes, and this entitles him to result payments, although drill and discipline may be indifferent, and school gardens, &c., unsatisfactory; while a most conscientious teacher, who pays equal attention to every branch of school study and discipline, but earns only, say, 78 per cent. of passes, fails to get his bonus. The case of the teachers of the smaller schools, who have often to work under great disadvantages in the shape of tottering school bungalows and *laissez faire* headmen, is still harder. With his handful of children he takes as much trouble as the teacher of the larger school, if not more, and presents an excellent school, but the bonus is denied to him because the number of children offered for examination is below the minimum prescribed. I beg to be allowed to suggest that the result payments to a teacher should depend not on the mere tabulated results of the annual examination of his school, but on all inspection reports—annual and incidental—made on his school during the year, and should be conditioned upon proficiency in every detail of school work.

I would require teachers to keep a monthly record of work done by them and to submit it to the Inspector at his incidental visit. He will then be in a position to judge whether sufficient progress has been made since his last visit.

Conclusion.

I here bring to a close my observations on the educational work of the Southern Province, and it now only remains for me to express my thanks to the school managers and to those of the Pattu or Korale Mudaliyars with whom my duties have so far brought me into contact for the uniform courtesy I have experienced at their hands.

XXXII.—REPORT OF Mr. C. DRIEBERG, SUPERINTENDENT, SCHOOL GARDENS.

With the closing of the School of Agriculture at the end of March, 1901, the recommendation of the Director of Public Instruction that school gardens should, where practicable, be established in connection with Government village schools received the sanction of His Excellency the Governor. Such a measure was calculated, as the Director of Public Instruction well put it, to give village education that practical touch which it is so roundly accused of lacking.

The idea of carrying on Nature-teaching through the agency of school gardens has come to be generally recognized as an important agent in directing the minds of village children to the study of their natural surroundings, and inducing them to observe and take an intelligent interest in what most intimately concerns them as a rural population.

The objects of the new scheme may be enumerated as follows:—(1) to make the surroundings of school children pleasant and attractive to them; (2) to teach them careful, systematic, and up-to-date methods of cultivation; (3) to use the gardens as an object lesson and acquaint them with the elementary facts of Science concerning the plant and soil; and (4) to introduce through the school and scholars, and after practical tests in the school gardens, new and better varieties of plants and trees for cultivation in the villages.

One of the admitted advantages of working among village children is that we approach them under the most favourable conditions, amid their natural surroundings, and while their minds are yet open and inquisitive to know all about natural objects.

The staff for working the scheme, as at present constituted, consists of myself as Superintendent of School Gardens, Mr. Alexander Perera, my Assistant and Manager of the stock garden, and three garden coolies for the upkeep of the stock garden. A part of each month is spent by me in Colombo over office and garden work, and the rest in travelling in the villages, in inspecting and regulating the work in such of the school gardens as have been started, and in endeavouring to extend the practical application of the scheme.

Mr. Perera, who came to me from the Royal Botanic Gardens, assumed duties here on October 10, since when I have been free to carry on my inspection work with the assurance that I am leaving behind in charge of the stock garden a reliable person to attend to personal inquiries during my absence, to meet the teachers who call for plants and seeds and give them any information they desire to have, and to attend to the vernacular correspondence, which is daily increasing.

At present there is only one stock garden, that on the grounds of the late School of Agriculture, Colombo. Here nurseries of fruit trees and other permanent economic products are maintained, and a large variety of vegetables and ornamental garden plants are grown for seed, with the object of having a ready supply of both plants and seeds for distribution to school gardens. The chief original source of supply has been the Botanic Gardens, the Director of which has given his hearty support to the working of the new scheme.

Indian and English varieties of vegetables have also been introduced, and the best kinds of plantains from Queensland, Fiji, and Java, and of yams from the West Indies and Java have been indented for. The soil in the stock garden is of a very poor description, but it has been considerably improved by the process of mixing, and is fast acquiring the character of a garden loam.

An improved water supply has lately been provided, and the employment of temporary extra labour to get over the preliminary work necessary for the laying out of a further area has also been allowed. These welcome concessions have enabled me to make satisfactory progress with the development of the stock garden during the past few months.

The work in the school gardens is carried on solely by the teachers, their assistants, the monitors, and school children. Where necessary financial aid is provided to meet initial expenditure in clearing land, cutting and levelling, and well sinking, fencing, &c. A set of garden tools suitable to requirements is furnished to each school.

The children work morning and evening in the garden, which is divided up into plots, and each given in charge of one or more children. The teachers are required to furnish (1) a monthly return of attendance at garden work, and remarks as to the state of the weather; (2) a monthly statement of accounts showing receipts from, and expenditure on, garden; (3) a quarterly crop return in which the following information has to be entered: (*a*) Names of plants and seeds, (*b*) when received, (*c*) when planted, (*d*) date of first flowering, (*e*) quantity of produce secured, and (*f*) sale price of same. The object of calling for these returns is to ensure regularity in carrying out the details of work in the garden, to enforce methodical work, to induce observation and the recording of results for future reference. Through the quarterly return it is expected that a body of useful information will ultimately be available regarding the growth of particular crops under particular conditions in different localities.

One of the chief difficulties to be contended with in connection with the working of the school gardens is the lack of training on the part of the teachers for the technical work they are required to undertake, but this difficulty is to a great measure being met by personal instruction on the spot given in the course of inspections, and by the issue of circulars containing instructions in the vernacular. Exceptional cases, however, occur where the teachers from having as students come under the influence of the late School of Agriculture, or from actual experience, possess a very fair knowledge of horticulture. In such cases it is found that some progress has already been made in gardening by the teacher gratifying his own taste in the matter. As cases in point, I might mention Kiriwattuduwa, Narandeniya, and Talpawila.

The first publication, issued as a circular to teachers, was a translation of a lecture delivered by Mr. Willis on School Gardens and Nature Study. Of this circular, 133 copies were forwarded to Government Vernacular Schools and 65 copies sent on application to Grant-in-Aid Schools. The second circular was a paper written in fuller explanation of the aim and object and importance of the new work demanded of the teachers. The third circular, which is about to be issued, gives directions for carrying out the first of a series of simple experiments in pot cultivation, to prove the value of manuring in as striking a way as possible. The Director of the Botanic Gardens has furnished three "lessons to teachers," with the idea of inducing the children to make observations regarding certain striking phenomena of plant life; these lessons are being translated into Sinhalese, and will be very shortly placed in the hands of teachers.

I have arranged that teachers who visit Colombo to draw their salaries should call at the stock garden as often as they can, while others should take advantage of their vacation to do so. Already a number of teachers, generally accompanied by assistants and monitors and sometimes by the older students, have availed themselves of the opportunity to see how work is carried on in the stock garden, how the plants of the kinds sent them are being grown, and to derive information on a variety of subjects connected with their work.

What has actually been accomplished in the way of school gardening is in most cases creditable, while in some cases the results have been better than could have been expected. Schools like Jamburelíya and Handapangoda are, I consider, models of what village schools should be, the children bright looking, the school and its surroundings clean and attractive, the garden well laid out and stocked with useful plants and trees which the children know all about. In one or two instances, as at Kahatuduwa, the change in the environment of the school has been so radical as to make it difficult of recognition.

A good deal of interest in the new scheme has been evinced by non-Government bodies, notably the authorities of St. Benedict's Institute, where a start in school gardening has already been made, and is likely to lead to extended operations.

Betel and tomato disease are receiving my attention with a view to the best treatment to be adopted to prevent the disease and check its progress.

Budding and grafting operations will be undertaken in the stock garden during the next rains, before which a complete set of the necessary tools, &c., are expected from America. It is intended to instruct our teachers in these methods of propagation.

The "Agricultural Magazine," which is now in its thirteenth year, continues to be issued monthly.

Classes in agriculture are conducted bi-weekly by myself or my Assistant in the Training School, the students of which participate in the work of the stock garden.

XXXIII.—FINANCIAL SUMMARY.

	1900. Rs. c.		1901. Rs. c.
Amount voted	872,838 74	...	934,628 66
Amount expended	820,133 87	...	907,595 56
Unexpended balance ...	52,704 87		27,033 10

The total amount voted for the service of the Department in 1901 was Rs. 934,628·66, of which a sum of Rs. 907,595·56 was expended during the year. The unexpended balance amounted to Rs. 27,033·10, representing Rs. 7,927·21 under Personal Emoluments and Rs. 19,105·89 under Other Charges.

The savings under Personal Emoluments is due chiefly to the closure of several schools during the year, to the votes for new schools not being fully exhausted, and to half pay and no pay leave granted to teachers.

Under Other Charges the large sums unexpended during the year were Rs. 2,151·50 on account of pupil teachers in Aided Schools, Rs. 5,326·86 on account of grants to Aided Schools, Rs. 1,240 on account of grants to Industrial Schools, Rs. 1,988·55 on account of cost of boarding students of the Agricultural School, Rs. 1,403·30 on account of printing Sinhalese school books, Rs. 3,744·63 on account of reformatory for juvenile offenders, and Rs. 2,175·57 on account of the Technical College, making a total of Rs. 18,030·41.

The total gross expenditure of the Department when compared with that of the previous year shows an increase of Rs. 87,461·69.

The nett expenditure of 1901, after deducting receipts from school fees, sale of books, stationery, &c., amounted to Rs. 860,183·96, showing an increase of Rs. 86,216·28 over that of 1900.

The receipts from school fees, sale of books, stationery, &c., during the year amounted to Rs. 47,411·60, and show an increase of Rs. 1,245·41 as compared with the receipts of 1900.

The following is a comparative statement showing the receipts and expenditure of the Department during the last two years :—

RECEIPTS.	1900. Rs. c.		1901. Rs. c.	
Amount received as school fees, Royal College	20,515 0		19,775 0	
Amount received as school fees, Technical College	4,000 0		7,945 0	
Amount received as school and boarding fees, School of Agriculture ...	1,303 90		73 63	
Amount received as school fees, Primary and Middle English Schools ...	2,144 81		2,340 17	
Amount recovered by sale of stationery	1,443 28		1,888 40	
Amount recovered by sale of books ...	14,486 70		15,159 40	
Amount received as examination fees...	2,272 50		230 0	
Nett receipts on account of votes ...	773,967 68		860,183 96	
Total ...	820,133 87		907,595 56	
EXPENDITURE.

No. 1A.—REPORT OF THE EXAMINERS on the special examination of certain Forms in the Royal College, December, 1901.

To the Secretary of the Local Examinations and Lectures Syndicate of the University of Cambridge.

SIR,—I BEG leave to submit to you my report on the above-named examination which I have recently conducted in accordance with your instructions.

Latin.

I will commence with *Form Lower III.*, the lowest class submitted to examination. The results were in general satisfactory, especially if account is taken of the difficulty in which some boys were obviously placed by their limited acquaintance with the English language. In Grammar the weakest point was the passive verb, and next to that the pronouns; some, indeed, who knew their verbs failed in the pronouns. The translation of Latin sentences into English and English into Latin was on the whole very creditable. The exercise book in use has the merit of great simplicity, but it is unfortunate that in the Latin sentences the subject always comes first: the result not uncommonly was that the pupils jumped to the conclusion that the first word in the Latin sentences which I gave them was always the subject, whereas I had in some cases inverted the order. The teacher would do well to guard against this danger by giving the boys sentences in which the object comes first.

Middle III.—The declension of nouns and adjectives was almost faultless. Many boys answered well in the verbs; some, however, had not yet mastered the passive voice. The weaker points were the numerals, the chief tenses of verbs, and the answers to questions on the usages of certain words. The translation of English sentences into Latin was considerably above the average performance which I am accustomed to find in English schools; curiously enough the translation of Latin sentences into English was weak, although mistakes in English words and constructions were much rarer in this form than in the lower form.

Forms Upper III. A and B.—These two forms had done the same work and took the same papers.

In Form B the knowledge of Grammar to the end of the regular verbs was generally good, and in many cases very good; some, however, failed in giving chief tenses and in answering questions on syntax. A high average was reached in the translation of English sentences into Latin. Many, however, in both forms treated *se* as a nominative case. In prepared translation (*Gradatim*) some decidedly good papers were sent up. Rather more than half the boys reached at least a fairly good standard in both translation and parsing, the remainder showed weakness in one or both of these departments. They would have gained, I think, by a little more practice in parsing. Two boys gained more than half marks for a passage of unprepared translation, and several others made promising attempts at it, the remainder did not attempt it, some probably from want of time.

The work of Form A in Grammar and exercises may be described in the same terms as that of Form B, with the proviso that a somewhat higher standard was reached, especially in the answers on chief tenses of verbs and on syntax. In prepared translation failures were rare, and the versions were usually accurate; a majority of the boys also did well in parsing, and the work throughout the form gave evidence of good teaching in Grammar. Six boys translated the greater part of the unprepared passage correctly, seven were successful with parts of it, twelve left it unattempted.

Form Lower V.—The answers in accidence were good, numerals being the only point in which any weakness was generally shown. The greater part of the form gave fairly good answers in syntax, though many found a difficulty in showing how an English perfect active participle should be treated in Latin. In easy composition the form acquitted itself well: several approached full marks, and only one failed to gain one-third. In an easy passage of unprepared translation several did not fall far below full marks, and all but two gained at least two-thirds—a very good result. In somewhat harder passages two boys did decidedly well, and nearly half the form gained half marks or more.

The preparation of the IXth Book of the *Æneid* had obviously tested the powers of the form more severely, on account of its difficulty and also on account of the command of English which it called for. Three boys sent up very fair papers, and many others had made praiseworthy efforts to understand the poem, others had only a vague recollection of the meaning. A good number answered correctly an easy question on the metre. The knowledge of collateral information requisite for the understanding of the text was somewhat scanty. Some gave fair answers on points of syntax, others gave explanations at variance with correct renderings which they had given of the passages. On the whole, the result of what had obviously proved a difficult task was creditable to the teaching.

French.

An elementary paper was set to *Form Lower V.*; many of the boys, however, had learned the language only one year. As no syllabus of work was sent in, the paper no doubt was a difficult one for these students. Half the form gave fairly good answers in Grammar, nearly as many were successful or fairly successful in unprepared translation, and several were fairly successful in translating English sentences into French. Revision of the verbs and instruction in the use of the conjunctive pronouns was generally required. No paper was good throughout, but most of the papers contained some good answers; in other words, some good work is being done, but it needs consolidating and extending.

I have sent in the list of marks in such a form as to show each boy's performance in the various departments of his papers. The College authorities may prefer to reduce the maximum in some cases.

The papers were very neatly written, and were arranged by those in charge of the examination in excellent order.

I have, &c.,

J. H. FLATHER, M.A.,
Emmanuel College, Cambridge.

February 20, 1902.

Countersigned on behalf of the Syndicate.

J. N. KEYNES,
Secretary.

To the Secretary of the Local Examinations and Lectures Syndicate of the University of Cambridge.

SIR,—I HAVE the honour to send you my report on that part of the examination of this College which was undertaken by me.

English Grammar.—The parsing and analysis of sentences were generally well done by Form Lower V., and the general grammar questions were, on the whole, satisfactorily answered by that class. The paraphrasing produced some rather curious results, but the composition was very fair. Forms Upper III. A and Upper III. B reached a good standard in this subject. Form Middle III. found the paper set them rather too difficult, but the majority showed an intelligent capacity for applying the knowledge they possessed. Their parsing and analysis were both commendable. Form Lower III. also were found to have been carefully taught. In fact it appeared to me that this subject had been well taught throughout.

English Poetry.—Shakespeare's *Henry V.* had been studied by Form Lower V. The knowledge of the plot and characters was not very accurate; that of the words and phrases asked about was better. A large number of boys gave the repetition correctly enough. Forms Upper III. A and B had read Goldsmith's *Deserted Village* with good results. Several meritorious accounts of that author were sent up. The passages set to be written out from memory were successfully reproduced by the majority, and several good attempts were made at paraphrasing a passage of English set for that purpose. Forms Middle III. and Lower IV. had learned some selected pieces of poetry very correctly, but in writing them out many boys proceeded without regard to the lines, as if they were writing prose. The questions on the subject-matter were satisfactorily answered and the paraphrasing was meritorious.

Dictation.—The boys seemed to have very little idea of punctuation. The spelling and handwriting were generally good, but in very many cases boys had obviously failed to grasp the meaning of the passage dictated, and seemed to have written down the words as it were mechanically without regard to the context.

Arithmetic.—Form Lower V. on a general paper reached a satisfactory standard, the work being on the whole accurate and neat. Form Upper III. A (to decimals and practice) did not, in my judgment, reach a sufficiently high standard. Too many boys failed to work correctly even very simple sums in vulgar fractions and decimals. A question on practice was also indifferently answered. Form Upper III. B on the same paper were on the whole a weaker set. Form Middle III. worked sums on the ordinary rules satisfactorily, but very many boys failed to work correctly those on vulgar fractions and decimals, notwithstanding that they were very simple. Form Lower III. (to vulgar fractions) in the main reached a fair standard, but were uncertain in manipulating fractions, and, generally speaking, not sufficiently accurate in their working.

Algebra.—Form Lower V. (to easy quadratics) sent up a most satisfactory set of papers, working accurately and using good methods. Forms Upper III. A and B also worked very accurately, and in fact a more difficult paper might have been set to them.

Euclid.—Form Lower V. (Books I.–IV.) were not very successful. Many boys failed to prove the propositions correctly, and very few even attempted the riders. Forms Upper III. A and B (Book I. to proposition 41) did much better work, exhibiting both accuracy and intelligence. Form Middle III. had mastered the definitions, axioms, and postulates of Book I. with great thoroughness. Many also wrote out correctly the propositions selected from those they had learned (1–15).

Examination in History and Geography.

To the Secretary of the Local Examinations and Lectures Syndicate of the University of Cambridge.

SIR,—I HAVE examined Forms Lower V., III. 1 A, III. 1 B, Middle III., and Lower III. in English History and Geography. I consider that the results of the examination are, on the whole, very satisfactory. The candidates had been carefully prepared, and they presented their work in a neat and careful form. There were in every class some who wrote thoroughly good answers, and I was impressed by the intelligence of the boys as a whole.

English History.

Lower V.—The performance was very good. The accounts of Walpole and of the rebellion of 1745 were full and clear, and in regard to other questions there were in each case some who answered with intelligence. Few, however, explained what is meant by the terms Prime Ministers and Cabinet. Those who acquitted themselves the best were A. de S. Gunesekera, D. C. Cooray, M. R. Akbar, and D. E. Joseph.

Form III. 1 A.—The average of marks obtained was high. The question on King Alfred was very successfully attempted, as were similar questions dealing with Wolsey and Simon de Montfort. The weakest point lay in the explanations as to the causes of the Wars of the Roses. Those who answered the best were S. C. Drahaman, J. de Silva, L. B. de Kretser, and D. Amarasuriya.

Form III. 1 B.—The results obtained here were not so good as in some other cases. The average of marks was not very high. The questions dealing with Wolsey, King Alfred, and Simon de Montfort were, however, well answered. Those who were at the head were A. E. de Silva, W. O. Jonklaas, and M. B. Panabokke.

Middle III.—The average of marks was a good one, and represented very good work on the part of the candidates, who had evidently taken great pains in preparation. This is more to their credit, inasmuch as the questions were not easy. Those who answered the best were E. C. de Kretser, R. Sripathmanathan, F. N. Mendis, and T. A. de Silva.

Lower III.—A considerable number of the boys in this form answered with credit. The accounts given of the crusades were intelligent and full, and the same may be said of many of the answers to a question on the reign of King John. Those who acquitted themselves best were H. R. Jayawardene, H. S. de Boer, R. G. de Silva, E. G. Perera, Æ. Samarasinghe, and M. S. Akbar.

Geography.

Lower V.—The map (India) was surprisingly well filled in, and the other questions produced thoroughly good results. The amount of information that was actually wrong was very small, a result of careful preparation on the part of the candidates. The following deserve mention:—M. R. Akbar, D. C. Cooray, D. E. Joseph, and C. C. Perera.

Form III. 1 A.—The mistake made as to the subject prepared was allowed for by the Examiner, the great mass of the marks being allotted to what had been prepared. The boys answered well, and the maps of the Indus and Ganges were clearly drawn. Intelligent answers were also sent up to a question on Siberia. Those who answered the best were D. Amarasuriya, E. F. Modder, and M. S. C. Drahaman.

Form III. 1 B. — Here, again, the mistake previously mentioned was allowed for. The answering was good, the maps being as in the form above praiseworthy. Those who deserve mention are A. E. de Silva, R. J. H. Koch, A. H. de Silva, and Weerasuriya.

Middle III.—A number of candidates from this form distinguished themselves, and the answering of the whole form was thoroughly good. The preparation had evidently been intelligent and careful. Those who were at the head were A. E. Christoffelsz, A. P. Jayetilleke, R. Sripathmanathan, H. W. B. Peries, T. N. Mendis, and E. W. Jayesekara.

Lower III.—Here, again, the preparation had been sound and intelligent. The names of those who deserve mention (many did well) are G. A. Perera, Æ. Samarasinghe, R. G. de Silva, H. S. de Boer, M. S. Akbar, and L. H. de Kretser.

I have, &c.,

W. J. ARCHBOLD, M.A., LL.B.,
St. Peter's College, Cambridge.

J. H. FLATHER, M.A.,
Assistant Secretary.

Report on Reading Examination of the Four III. Forms.

Reading.—In assessing the reading, I apportioned marks under five heads:—Fluency (4), Articulation (8), Correct Pronunciation (8), Correct Reading (8), Expression (12), total 40.

Under the head of Fluency, I expected a high standard, and was rather disappointed. Those who read without any hesitation at all were in III. 1 A 12 boys, III. 1 B 15, Middle III. 14, Lower III. 16. Articulation had received some attention in all the forms, but not so much as it deserves. One boy in III. 1 A and two in III. 1 B completely failed to make themselves audible. Correctness of English accent depends on circumstances, which are to some extent outside the form master's control. Out of the 105 boys examined, I have marked 18 as having an English accent that is really good and 13 as very bad; the rest have local peculiarities, but they are not strongly marked. By correct reading I mean simply reading without omitting or altering a word. One would expect this to be attained by almost all, but it is not. Those completely successful were 14 in III. 1 A, 5 in III. 1 B, 9 in the Middle III., and 20 in the Lower III. The passage read by each boy was of considerable length.

In the matter of expression a fair number in each form did well; especially in III. 1 A the boys had evidently been taught to try to read intelligently, but there was rather a tendency towards a style which, while observing the stops, showed mechanical sameness of voice throughout the sentence.

Questions.—The meanings of individual words were correctly given in the very large majority of cases. A large number in all the forms failed when called upon to express in other words the meaning of a whole sentence. The following looks a very easy question:—

"The return of fine weather was preceded by another violent storm." Express this in another way beginning with the word "before."

Questions of this type led to a large number of failures. In the Lower III. Form not sufficient use had been made of the blackboard in explaining unfamiliar objects, such as a "sugar-loaf hat" and a "ninepin."

CEYLON SCHOLARSHIP EXAMINATION.

The Number of Candidates was Seven.

The subjects of examination were—

(*a*) English.
English History.
Examiner: F. S. Boas, M.A., Balliol College, Oxford.

(*b*) Mathematics.
Examiner: P. J. Kirkby, M.A., New College, Oxford.

(*c*) Science.
Examiner: W. W. Fisher, M.A., Corpus Christi College, Oxford.

On the whole examination M. T. Akbar is recommended for election to the Scholarship. The following showed special merit in the examination :—J. S. Jayawardene, W. M. Muller.

General Remarks of Examiners.

(*a*) *English and English History.*—The results were satisfactory, though not brilliant. Two boys did thoroughly well all round, one did well, two very fairly, and two poorly. The work of the weakest candidates was below the level naturally expected in a competition of this kind. The subjects on which there was the best answering were the earlier parts of the History paper, the philological and grammatical part of the Language paper, and the "set passages" and allusions in the Literature paper. Here careful study and training were shown. The style also of the majority of the candidates was free from grave defects; but the more general questions in the Literature and Language papers, testing critical capacity and breadth of reading, were, as a rule, inadequately done. The essays on "Imperial Federation" were, on the whole, better than those on "A Definition of Poetry." The general impression left was of intelligence and quickness rather than of depth and originality.

(*b*) *Mathematics.*—These candidates sent in some excellent work. Two of them were very good, and one of these was much better than the other. The papers were almost invariably neat and lucid and easy to follow. The candidates appear to have been well taught and trained to be thorough. The Arithmetic papers were, however, spoilt by Algebraic methods more or less disguised. Such methods are not admissible in Arithmetic papers. The answers in Euclid showed a poverty in solving riders, the best candidates sending in clumsy solutions. In Analytical Geometry the candidates, with two exceptions, did not appear to have grasped the principles of the subject. The answers in Mechanics were, as a whole, much better. Mechanical principles have been grasped and understood. The answers in Trigonometry were also satisfactory, and one extremely good set of answers was done in this subject. On the whole, the work was good, and even those candidates who failed or did badly on some papers showed by their work in other subjects that they have plenty of ability.

(*c*) *Physics and Chemistry.*—The candidates were much alike in quality, and the work, as a whole, reached a satisfactory degree of excellence. Although not quite so good as the work of the best English schools, in several cases it reached the standard of distinction in the higher certificate examination. The answers were generally clear, well arranged, and gave evidence of careful intelligent work. In Chemistry good acquaintance with facts was shown, but some deficiency of theoretical knowledge. The results in analytical work were mostly correct, but owing possibly to haste some erroneous conclusions were reached. The work in Heat was satisfactory, that in Light not so good. Some candidates seem to lack experimental laboratory practice. The answers to questions in Static and Current Electricity were satisfactory, but little knowledge was shown of the chemical effects of electric currents, a deficiency which would be remedied by a practical course of work.

* This was omitted by error from last year's report.

OXFORD AND CAMBRIDGE SCHOOLS' EXAMINATION.

To the Director of Public Instruction, Ceylon.

SIR,—WE are instructed to send you the following report on the examination for the English University Scholarship recently held at Colombo under the authority of the Oxford and Cambridge Schools' Examination Board.

The subjects of the examination were—

(*a*) Latin and Greek; Greek and Roman History: four candidates.
Examiner: Rev. G. C. Richards, M.A., Oriel College, Oxford.

(*b*) English and English History: four candidates.
Examiner: E. de Selincourt, M.A., University College, Oxford.

On the whole examination V. M. Fernando is recommended for election to the Scholarship. The following showed special merit in the examination:—Arndt in English History, Alwis in English History and Essay, and Kretser in English Language and History, and in Greek and Roman History.

The substance of the report is taken from the reports of the Examiners.

General Remarks.

(*a*) *Classics and Greek and Roman History.*—Of the four candidates, two were distinctly weak and showed little or no power of attacking a piece for translation either into or out of English. The same boys, though they had committed to memory a considerable number of facts and dates, did not answer the History questions with much intelligence, nor were they able to answer any questions involving higher Grammar and Syntax. The other two came very near to one another, and had both attained a respectable, though not a high, degree of proficiency in the languages. In Latin and Greek Grammar they were quite satisfactory, in Greek Sentences accurate, but in Latin Prose weak. The work in Greek Unseen was better than in Latin, and their answers in the History papers were quite satisfactory. The Greek work seemed somewhat better than the Latin on the whole. Except in History, the performance was not so good as when I last examined, or as one might naturally expect in this competition.

(*b*) *English Language, Literature, and History.*—The work of the candidates reached on the whole a very fair standard, and was of unusually equal merit. The prescribed subjects had been thoroughly prepared, and where a question was asked which merely required the reproduction of definite book knowledge the answers were nearly always highly satisfactory. Hence the English History paper obtained the best results; only a few questions, which required independent judgment rather than definite information, were inadequately dealt with. The answers to the Shakespeare paper, on the other hand, which contained several questions entailing a knowledge beyond the set books, and a more original power of criticism, were far less satisfactory. The Essays hardly reached the standard which is looked for in a scholarship examination. They were correctly written, but showed little power to conceive their subject as a whole, and very little freshness or originality. On the whole, the work showed the same qualities as were described in the report of last year's Examiner. The boys were evidently quick to learn and retentive of whatever their books or teachers had imparted to them, but they had not reflected enough for themselves.

We are, &c.,

E. J. GROSS, } Secretaries
P. E. MATHESON, } to the Board.

May, 1901.

No. 4.—THE CAMBRIDGE LOCAL EXAMINATIONS.

The following table shows the number of presentations for the Cambridge Local Examinations since their introduction in 1880 :—

Year.	Total Number of Boys presented. Senior.	Junior.	Total Number of Girls presented. Senior.	Junior.	Total Number presented.
1880	4	17	—	—	21
1881	14	30	—	5	49
1882	7	43	—	5	55
1883	15	86	—	14	115
1884	23	109	—	5	137
1885	27	159	1	17	204
1886	42	105	3	22	232
1887	32	133	3	21	189
1888	54	124	4	27	209
1889	55	115	3	26	199
1890	40	142	8	33	223
1891	59	156	7	31	253
1892	64	190	9	53	316
1893	58	169	8	42	277
1894	67	179	3	42	301
1895	60	167	7	43	277
1896	57	186	13	43	299
1897	75	195	12	70	352
1898	75	180	12	78	345
1899	84	197	24	81	386
1900	127	210	15	77	429
1901	126	268	28	86	508

The following is the list in order of merit of the successful candidates at the Cambridge Local Examination held in December, 1901 :—

SENIOR BOYS.

1.	C. I. de Silva	Royal College, Colombo
2.	E. G. Mack	Royal College, Colombo
3.	A. E. Keuneman	Royal College, Colombo
4.	J. F. J. Soertsz	St. Joseph's College, Colombo
5.	G. J. Perera	St. Joseph's College, Colombo
6.	L. H. de Alwis	St. Thomas's College, Colombo
7.	D. E. Weerasooriya	Royal College, Colombo
8.	E. H. Beling	Royal College, Colombo
9.	A. Mahadeva	Royal College, Colombo
10.	P. U. S. Weeresinghe	St. Joseph's College, Colombo
11.	G. K. W. Perera	Ananda College, Colombo
12.	A. C. Weerekoon	Royal College, Colombo
13.	E. H. S. Beven	Royal College, Colombo
14.	R. F. P. Jayetilleke	Royal College, Colombo
15.	A. F. Goonewardene	Royal College, Colombo
16.	A. J. Poulier	St. John's Boys' High School, Panadure
17.	G. Amarasinghe	Richmond College, Galle
18.	P. M. A. Corea	St. Benedict's Institute, Colombo
19.	T. N. Nathanæl	St. Thomas's College, Colombo
20.	C. W. W. Kannangara	Richmond College, Galle
21.	B. Fernando	Wesley College, Colombo
22.	H. H. Bartholomeusz	St. Thomas's College, Colombo
23.	H. Samarasinghe	Royal College, Colombo
24.	J. B. A. Raux	Wesley College, Colombo
25.	D. J. N. Perera	St. Benedict's Institute, Colombo
26.	C. Arulambalam	Royal College, Colombo
27.	A. G. A. Gomis	Private Tuition
28.	G. E. G. Weeresinghe	St. Joseph's College, Colombo
29.	J. C. Hallock	St. Thomas's College, Colombo
30.	A. B. Gunesekara	Royal College, Colombo
31.	E. C. Alles	St. Joseph's College, Colombo
32.	N. de Alwis	Royal College, Colombo
33.	C. Manickan	St. Thomas's College, Colombo
34.	H. A. Goonetilleke	Trinity College, Kandy
	H. S. Perera	St. Thomas's College, Colombo
36.	C. P. Thamotheram	Wesley College, Colombo
37.	D. E. Thomas	St. Benedict's Institute, Colombo
38.	M. W. Crofton	St. Thomas's College, Colombo
39.	D. O. O. D'Zilva	City College, Colombo
40.	C. A. P. Jayasuriya	Royal College, Colombo
41.	A. Wijetilaka	Royal College, Colombo
42.	H. Amerasinghe	St. Thomas's College, Colombo
43.	D. D. Outschoorn	St. Joseph's College, Colombo
44.	A. G. Sirimanna	St. Thomas's College, Colombo
45.	F. Ondatjie	Royal College, Colombo
46.	C. Arasaratnam	St. Patrick's College, Jaffna
47.	G. V. de A. Wijesinghe	Wesley College, Colombo
48.	J. H. Perera	Royal College, Colombo
49.	V. R. de Livera	Royal College, Colombo
50.	G. V. E. Perera	St. Joseph's College, Colombo
51.	J. W. Wickramasinghe	Private Tuition
52.	W. D. Martin	St. Joseph's College, Colombo
53.	R. E. Mendis	Prince of Wales's College, Moratuwa
54.	R. W. T. C. Vanderwall	Private Tuition
55.	H. Chandraraja	Ananda College, Colombo
56.	S. T. Thambyah	Wesley College, Colombo
57.	E. R. V. Mendis	Trinity College, Kandy

58.	C. H. Gomes	...	St. Thomas's College, Colombo
59.	D. P. Eugene	...	St. Benedict's Institute, Colombo
60.	W. Kodippily	...	Mahinda College, Galle
61.	E. Roche	...	St. Benedict's Institute, Colombo
62.	N. T. Andrayas	...	Richmond College, Galle

MATHEMATICAL PRIZE.

The Mathematical Prize has been won by E. G. Mack of the Royal College.

SCHOLARSHIPS AND EXHIBITIONS.

Junior Boys.

First Exhibition, value Rs. 240, tenable for three years, has been awarded to F. W. Hallock of St. Thomas's College.

Second Exhibition, value Rs. 120, tenable for three years, has been awarded to E. A. Lewis of Ananda College.

Third Exhibition, value Rs. 120, tenable for three years, has been awarded to E. F. de Saram of Royal College.

Senior Girls.

The Senior Scholarship for Girls, Rs. 240, tenable for three years, has been awarded to Miss K. C. Jayasuriya of Queen's College, Colombo.

Junior Girls.

First Exhibition, Rs. 120, tenable for three years, has been won by Miss R. U. H. van Houten of St. Clare's College, Colombo.

Second Exhibition, Rs. 120, tenable for three years, has been won by Miss L. M. Fretsz of Queen's College, Colombo.

The subjoined tables show the comparative success of the different competing colleges and schools :—

No. 6.—TRANSLATED FROM "JAVE ET SES HABITANTS," BY J. CHAILLEY-BERT, 1900.

Government, with the best intentions, started an agricultural school at Buitenzorg. The proposal was to give lessons in agriculture there to the sons of chiefs, who would some day be chiefs themselves, and would in their turn introduce among their dependents the methods they had learnt. The course was only to last two years, the boarding fees were low. Pupils came in at first very readily. The two years elapsed; and their fathers then came on the scene and lost no time in asking, "What is my son going to get out of this?" "Your son," was the answer, "will only get what his birth assures him already. We have taught him agriculture, we have taught him the right methods and the proper seasons for planting. It remains for him now to take advantage of this. He can teach his neighbours how to cultivate their fields and get twice as much produce from them." This was a great point, no doubt, but it was not what they wanted. When the chiefs had learnt all there was to learn as to the future held out to the pupils of the agricultural school, they gradually ceased sending their sons to it. One fine day it was burnt down. Government took no steps to rebuild it. It was no use because it did not lead to "an opening." Java has been, and to some extent still is, the Holy Land of "Government employment" (*fonctionnairisme*).

No. 7.—COPY OF ENTRY IN THE LOG BOOK OF THE HIKKADUWA BOYS' ENGLISH AND VERNACULAR SCHOOL.

As desired by the Director of Public Instruction I distributed the two prizes which he had sent, as well as some other prizes which Mr. Soyza and his assistant had got ready.

There were 230 boys, a good number of parents, and several friends and well-wishers, who had contributed to a treat of sweetmeats to the children on the occasion.

The school building was well and tastefully decorated by the children.

Some speeches were made, the most notable being one made on behalf of the parents, thanking the Director for the prizes he sent with thanks to the teacher for having raised the school to its present position in the estimation of the Director.

J. P. GOONERATNE,
August 7, 1901. Mudaliyar, Wellaboda Pattu.

I may also mention that five of the leading residents and the head master offered each a prize for the children after the next year's examination.—J.P.G.

No. 8.

THE Handapangoda teacher reports that on the 7th instant there was a distribution of prizes in his school. The Mudaliyar of the korale presided on the occasion. Twenty-four boys received prizes, of which the first two were given by the Mudaliyar, and the others by the Forester, the headman, some villagers, and the teacher. The 115 boys present on the occasion were served with tea by the teacher.

October 20, 1901.

No. 9.—VISITS TO MUSEUM.

The DIRECTOR OF PUBLIC INSTRUCTION to the Hon. the COLONIAL SECRETARY.

Office of Public Instruction,
Colombo, July 15, 1901.

SIR,—I VENTURE to think that the Colombo Museum is not nearly as much utilized as it might be for educational purposes, and I propose to send a circular to managers of Aided Schools in Colombo (English and Anglo-Vernacular) to say that if they see fit occasionally (*e.g.*, once in two months) to send their teachers and pupils to the Museum during school hours for instructional purposes, it may count as an attendance in school, and be marked in the register as such. The Museum has plenty of material for the purpose, more especially in the direction of Elementary Science, Natural History, and Geography. I should of course point out that it might be advisable for the head teacher to visit the Museum beforehand and arrange in his (or her) mind to what groups of objects the attention of the children can most profitably be directed, and how they can be fitted into the current school work. It would also tend to teach the children that education does not consist merely in bookwork, but also in observation of the world around them. It might further inspire them with a desire to collect materials for school museums.

2. Such visits as these have been encouraged for the last two or three years in England and on the Continent, apparently with excellent results, but as it is a new departure here, and as the time to be so spent is "Government time" involving Government money, it would not be right for me to start it without His Excellency's consent. I should ask schools to give me notice of their intention to make use of this privilege, partly that I may judge of the extent to which it is utilized, and partly that I may be present on one or two occasions myself and judge of the practical utility of the scheme.

I am, &c.,
S. M. BURROWS,
Director of Public Instruction.

No. 10.—REMARKS MADE BY THE HEAD TEACHER OF THE WEUDA BOYS' VERNACULAR SCHOOL IN HIS MONTHLY REPORT FOR SEPTEMBER, 1901.

SIR,—I BEG leave to inform your honour that I have been collecting specimens of serpents, &c., for the school museum. A safe and a supply of stoppered bottles (medium and small sizes for preserving) and spirits, for which only I have to spend much, are required. For want of these I was obliged to throw away some good specimens which I collected lately. The few I have with me at present are admired by every visitor, and the boys seem to be very much delighted with it. Some of the leading villagers, I am glad to say, have had the kindness to promise to render a helping hand in collecting specimens for the museum.

D. J. M. SENEVIRATNE,
Head Teacher.

No. 11.—The DIRECTOR OF PUBLIC INSTRUCTION to the Hon. the COLONIAL SECRETARY.

No. 132. Office of Public Instruction,
Colombo, March 19, 1901.

SIR,—I HAVE the honour to forward for the information of His Excellency the Governor copy of a circular letter which I sent to all Government Schools on the subject of the lamented death of Her Majesty the Queen and the accession of King EDWARD VII. The letter was in Sinhalese (and Tamil), and each head teacher was instructed to choose an appropriate day, as near the date of the Queen's funeral as possible, and explain the contents of the letter in simple language to the assembled school children. The returns which I have received show that the letter was read in this way to 36,687 children, of whom 31,370 were boys and 5,317 girls. In several cases the teacher reports that there was a large assemblage also of the parents of the children. Actual numbers are only given in a few cases, and these total up to 2,835.

2. I may perhaps add that His Lordship the Bishop of Colombo happened to be passing a small and isolated school in the Province of Sabaragamuwa, and thinking it to be a Gansabhawa, he proposed to take his breakfast there. He found, however, that it was a Government school,

and that the teacher was just about to carry out the order referred to above. He wrote me a most interesting account of it, which, being in a private letter, I am not at liberty to quote; but I am sure he would permit me to say that he thought it very instructively and impressively carried out.

3. I would also add that I was very much struck with the respectful and appropriate signs of mourning displayed in all the schools, Government and Grant-in-Aid, which I visited about that time.

S. M. BURROWS,
Director of Public Instruction.

Functions at Queen's Death.

Circular to Teachers of all Government Schools.

To the Head Teacher of ——— School. January 29, 1901.

I SHOULD be glad if you would fix a convenient and early date for ensuring as large an attendance of your school children as possible, and would then explain to them in simple language the following :—

You children ought to know that this is a very sad time for Ceylon and for the whole British Empire. On January, the 22nd, the Great Queen VICTORIA, whom we all loved so much, died. She was a great Queen, not only because she reigned over many hundred millions of subjects, not only because she reigned longer than any English monarch has ever reigned, not only because mighty deeds were done and great inventions discovered in her time, but because she was good and just and kind, because she was as ready to show sympathy to the poor and suffering as to give praise to the brave and clever, because she set a splendid example of right conduct as a Queen, a Wife, and a Mother.

Though you never saw her, you can read about her and hear about her, and try to follow the example she set. You can cherish her memory yourselves, and in the future you can tell your own children of the love which all British subjects felt for the good QUEEN VICTORIA.

You are now subjects of her eldest son, whom you have known hitherto as the Prince of Wales, but who is now King of England and Emperor of India with the title of EDWARD THE SEVENTH.

Please report on what date you carry out this order, and how many children were present.

S. M. BURROWS,
Director of Public Instruction.

No. 12.

The following tabular returns afford at a glance a summarized comparison of the figures of Government, Grant-in-Aid, and Unaided Schools (including Pansala Schools and Private Schools) since the year 1870 :—

Return of Schools presented for Examination.

* Lace-making, 26; crochet, lace-, and dress-making, 26.

No. 14.—COMPARATIVE EDUCATIONAL FIGURES, CEYLON AND JAMAICA.

	Ceylon.	Jamaica.
Population as per Census taken in 1891	3,012,224	639,431°
Number of schools in 1900	1,828	746†
Number of pupils	169,393	98,598
Revenue in 1900	25,913,142	11,372,850
Amount spent on education in 1900	Rs. 820,133·87	Rs. 900,000
Cost of educating each pupil	Rs. 4·84	Rs. 9·13

The proportion of pupils to the population is 1 in 18 in Ceylon and 2 in 13 in Jamaica.

° Nearly one-fifth of Ceylon. † Less than half of Ceylon.

GENERAL TABLES.

The two following tables classify (*a*) the schools presented for examination during 1900 and 1901, together with the number of scholars on the list and the number in daily average attendance, under the heads English, Primary and Middle English, and Vernacular; (*b*) the number of scholars actually examined in each of the above classes of schools :—

Return classifying the Government and Grant-in-Aid Schools examined during 1900 and 1901 as English, Primary and Middle English, and Vernacular, showing the Number of Scholars on the List and the Number in Average Daily Attendance.

1900.	No. of Schools.	No. of Boys on the List.	No. of Girls on the List.	Total No. of Boys and Girls on the List.	Total No. of Scholars in Average Attendance.
Government.					
English	4	434	51	485	432
English Primary and Middle	12	2,355	—	2,355	1,505
Vernacular	484	37,643	8,159	45,802	28,519

NEW SCHOOLS.

The following Government Vernacular Schools were opened during the year 1901 :—

Western Province.
Atulugama boys' (Mohammedan)
Henagama girls'

Central Province.
Elagamuwa boys'

Southern Province.
Akurale girls'
Ellakake girls'
Katuwana boys'

Eastern Province.
Gomarasankadavai

North-Western Province.
Wekada boys'

Province of Uva.
Etampitiya boys'

Province of Sabaragamuwa.
Yakella boys'

The following Government Vernacular Schools were closed during the year 1901 :—

Western Province.
Dagonna boys'
Gampaha girls'
Torapitiya boys'

Southern Province.
Bundala boys'
Malhatawa boys'

The following Grant-in-Aid Schools were registered during the year 1901 :—

TRAINING SCHOOLS AND TEACHERS' EXAMINATIONS.

GOVERNMENT TRAINING SCHOOLS.

The following return, giving figures for the last six years, shows the number of Government teachers who are trained or certificated :—

		1896.	1897.	1898.	1899.	1900.	1901.
(*a*) Certificated Teachers trained at the old Normal School		160 ...	157 ...	136 ...	128 ...	128 ...	128
(*b*) Teachers not so trained, but who have passed the Teachers' Certificate Examination	Males...	260 ...	266 ...	267 ...	296 ...	281 ...	305
	Females	93 ...	97 ...	102 ...	95 ...	118 ...	112
(*c*) Uncertificated Teachers		55 ...	44 ...	52 ...	58 ...	60 ...	63
(*d*) Agricultural Instructors and Teachers trained in the new Training Classes		63 ...	60 ...	59 ...	54 ...	66 ...	65
	Total ...	631	624	616	631	653	673

GRANT-IN-AID TRAINING SCHOOLS.

A useful work on a small scale is also done by the Grant-in-Aid Vernacular Training Schools. The following table shows the result of their first- and second-year examinations held in 1901 :—

Training School.	Management.	Number of Scholars who have passed their First Year's Examination and have earned a Grant of Rs. 100 (male) or Rs 125 (female) each.	Number of Scholars who have passed their Second Year's Examination and have earned a Grant of Rs. 150 (male) or Rs. 175 (female) each.

EXAMINATION FOR CERTIFICATES OF TEACHERS OF GRANT-IN-AID ENGLISH SCHOOLS.

The following table shows the results of the examination for certificates for teachers in Grant-in-Aid English Schools during 1901 :—

		Number presented.	Number passed.
Second Class	Males	24 ...	10
Do.	Females	3 ...	2
Third Class	Males	63 ...	10
Do.	Females	4 ...	1

EXAMINATION FOR CERTIFICATES OF TEACHERS OF GRANT-IN-AID VERNACULAR SCHOOLS.

The following table shows the results of the examination for certificates for teachers in Grant-in-Aid Vernacular Schools during 1901 :—

		Number examined.	Number passed.
Third Class (Tamil) ...	Males	2 ...	—
Do. (Sinhalese) ...	Males	70 ...	13
	Females	15 ...	2
Second Class (Tamil) ...	Males	4 ...	1
Do. (Sinhalese) ...	Males	27 ...	13

The number of Grant-in-Aid Schools is 1,407, and the rule forbidding payments of grants to schools taught by uncertificated or unlicensed head teachers applies only to Vernacular Boys' and Mixed Schools, of which there are 974.

PUBLICATIONS OF THE DEPARTMENT.

The following books were issued by the Department during the course of the year :—

Title of Books.	Editions printed.	No. of Copies printed.	No. of Thousands already reached.
Sinhalese First Book of Lessons by Mudaliyar Simon de Silva	41st–42nd ...	42,000 ...	279th
Do. 1st Standard Reader by do. ...	29th ...	24,000 ...	139th

Colombo, April 25, 1902.

S. M. BURROWS,
Director.

REGISTRATION.

REPORT OF THE REGISTRAR-GENERAL OF LANDS FOR 1901.

I.—REGISTRATION OF DEEDS.

THE year 1901 shows an increase of registration business and income over 1900 and was the busiest year in the history of the Department, except 1896, and the most lucrative, except 1896, 1897, and 1898. In 1896 a large number of deeds which had escaped registration in previous years was registered owing to special measures taken by the Department. In 1897 and 1898 deeds of very large values were registered. In 1901 no such causes were at work, and the year's business and revenue must be deemed very satisfactory.

2. The number of deeds registered in 1901 was 83,777, against 82,437 in 1900, 78,873 in 1899, 76,845 in 1898, 81,981 in 1897, 88,358 in 1896, 70,772 in 1895, 50,004 the yearly average in the decade 1885–94, and 39,884 the average in the decade 1875–84; an increase of 1,340 or 1·6 per cent. on 1900, 4,904 or 6·2 per cent. on 1899, 6,932 or 9·02 per cent. on 1898, 1,796 or 2·1 per cent. on 1897, 13,005 or 18·3 per cent. on 1895, 33,773 or 67·5 per cent. on 1885–94, 43,893 or 110·05 per cent. on 1875–84, but a decrease of 4,581 or 5·1 per cent. on the year 1896.

3. The number of separate properties dealt with by the deeds was 135,879 in 1901, against 134,038 in 1900, an increase of 1,841 or 1·3 per cent.

4. The total value of stamp duty levied during the year under the Registration Ordinance (including the duty on applications and copies) was Rs. 227,352, against Rs. 216,462 in 1900, Rs 221,036 in 1899, Rs. 235,323 in 1898, Rs. 238,058 in 1897, Rs. 245,048 in 1896, and Rs. 177,474 in 1895; an increase of 5 per cent. on 1900, 2 per cent. on 1899, and 28 per cent. on 1895 (which till then showed the highest income), but a decrease of 3, 4, and 7 per cent. respectively on 1898, 1897, and 1896.

5. Tables III., IV., and V. in the Appendix show in detail the number and description of the deeds registered and the value of the stamps levied in each Land Registry Office in 1901.

6. Of deeds affecting immovable property, 41,252 out of a total of 83,121, or 50 per cent., bore registration stamps of the value of Re. 1 (which is the duty on transactions affecting a single land not exceeding Rs. 100 in value). 5,989 bore stamps of Re. 1·25, 1,857 of Re. 1·50, 777 of Re. 1·75, 225 of Rs. 2·25, and 130 bore stamps of values ranging from Rs. 2·75 to Rs. 5·75; a total of 8,978 of the value of Rs. 100 and under, each dealing with more than one land, and therefore charged more than Re. 1.

7. Thus, about 50,230 or 60 per cent. of the total number of deeds represent transactions of the value of Rs. 100 and under; 31,062 or 37 per cent. were of higher value; and 1,829 or 2 per cent. were registered free of duty, being deeds in favour of the Crown, Fiscals' seizures, &c.

8. The average registration duty on a deed was Rs. 2·50 in 1901, against Rs. 2·31 in 1900, Rs. 2·46 in 1899, Rs. 2·76 in 1898, Rs. 2·63 in 1897, Rs. 2·56 in 1896, and Rs. 2·33 in 1895.

9. The highest registration duty levied on a single deed was Rs. 960 in the Colombo Office on a mortgage bond securing a sum of Rs. 956,250. The next highest duty, Rs. 630, was recovered at the Kalutara Office.

10. There were forty-four deeds registered throughout the Island, each yielding a duty of Rs. 100 and upwards. Thirteen (duty ranging from Rs. 100 to Rs. 520) were registered in the Kandy Office, twelve (duty ranging from Rs. 100 to Rs. 297) in Colombo, six (duty ranging from Rs. 100 to Rs. 348) in Chilaw, three (duty ranging from Rs. 130 to Rs. 470) in Ratnapura, two in Kegalla with duty of Rs. 184 and Rs. 572, two in Negombo with duty of Rs. 145 and Rs. 516, one in Kalutara with a duty of Rs. 601, one in Badulla with a duty of Rs. 360, one in Kurunegala with a duty of Rs. 302, one in Galle with a duty of Rs. 124, one in Jaffna with a duty of Rs. 110, and one in Matara with a duty of Rs. 100.

11. Of 83,121 deeds affecting immovable property, 45,814 or 55 per cent. (against 57 per cent. in 1900) were conveyances by sale and gift, 26,563 or 32 per cent. (against 30 per cent. in 1900) mortgages, 3,809 or 5 per cent. (against 4 per cent. in 1900) leases, and the remainder 6,935 or 8 per cent. (against 7 per cent. in 1900) were deeds of other description.

12. 656 deeds or ·7 per cent. of the total number of deeds registered dealt with movable property, against 559 deeds or ·6 per cent. in 1900. 338 were bills of sale, 215 mortgages, and the remaining 103 were instruments of other description.

13. The total amount secured by mortgages registered in 1901 (affecting movable as well as immovable property) was Rs. 25,058,969, against Rs. 17,826,052 in 1900, an increase of seven million rupees, or 40 per cent., on 1900.

14. The value of properties transferred by sale, gift, &c., and registered in 1901 was Rs. 24,336,897, against Rs. 19,124,106 in 1900, an increase of five million rupees, or 27 per cent.

15. The value of other deeds registered in 1901 was Rs. 12,246,654, against Rs. 10,000,319 in 1900, an increase of two million rupees, or 22 per cent.

16. The total value of all the registered transactions was Rs. 61,642,521 in 1901, against Rs. 46,950,478 in 1900, an increase of 14½ million rupees, or 31 per cent., which occurred chiefly in Colombo, Kalutara, Kandy, Kegalla, Kurunegala, Negombo, Trincomalee, and Anuradhapura.

17. The average value of a registered deed was Rs. 735 in 1901, against Rs. 569 in 1900, an increase of Rs. 166.

18. The following Table A shows the progress of registration and the financial condition of this Department since it was established, and includes the number and value of deeds executed in each year :—

Table A.

Progress of Registration and Financial Condition of the Land Registration Department, 1864–1901, with Total Number and Value of Deeds registered and of Deeds executed.

* The minus sign (—) indicates deficit. † Office established in 1888. The average for 1888 to 1895 is shown here.

20. The year 1901 shows a rise in registration business of 1 per cent. over 1900, and compares favourably with any of its predecessors, with the exception of 1896, where the increase (5·1 per cent. on 1901) was attributable to the cause stated in paragraph 1. Compared with the period 1895–99 the year under review shows a rise of 5·5 per cent., and compared with the decades 1885-94 and 1875–84 a rise of 67·5 and 110·05 respectively. Since 1864, when the Department was created, the business has increased more than five-fold, the number of deeds registered in that year being 15,841, as against 83,777 in 1901.

21. The increase of business in 1901 compared with 1900 was shared by Colombo, Kurunegala, Negombo, Kegalla, Ratnapura, Tangalla, Badulla, Trincomalee, and by Anuradhapura.

22. The Colombo Office, as usual, takes the first place. Since 1895, when it overtook Kandy, which till then was the premier office, Colombo has made steady progress, which has been rapid during the past decade. The number of deeds registered rose from barely 7,500 in 1890 to 12,250 in 1895, 15,800 in 1900, and 16,600 in 1901.

23. Kandy, which occupied the second place till 1899, and was outstripped by Kurunegala in 1900, has gone down another step in 1901, yielding the third place to Negombo. The number of deeds registered in these offices in 1901 was 9,544 in Kurunegala, 8,362 in Negombo, and 8,321 in Kandy. The decline of business in Kandy is attributed to the fall in the price of tea.

24. In point of revenue, however, Kandy retains its place next to Colombo, and yielded in 1901 an income of Rs. 26,282, which is an increase on Rs. 25,618 yielded in 1900.

25. Kurunegala and Negombo show an improvement in business of 6 and 7 per cent. respectively on the previous year.

26. Galle, which comes next to Negombo with 6,494 deeds (against 6,793 deeds in 1900), while showing a deficit of 4 per cent., retains the fifth place, which it occupied last year. The deficit is attributed to the decline in the plumbago industry.

27. Matara, which registered 6,249 deeds in 1901, shows a slight increase of 1 per cent. over 1900, with a corresponding increase in revenue.

28. Kalutara follows with 5,798 deeds, a decrease of 2 per cent. on 1900.

29. Jaffna, which is the next in order of business, shows a decrease of 3 per cent. on 1900.

30. Of the minor offices, Anuradhapura shows a considerable improvement in business, having registered 715 deeds, an increase of 214 per cent. over 1900. According to the District Judge, "The business done during the year 1901 does not represent any extraordinary activity in sales of land, but is merely a nominal number of transactions, allowing of course for the activity which the prospect of the early advent of the Railway is arousing." He thinks that the business is likely to increase further. In point of revenue, too, it shows a large increase, 159 per cent. over 1900. The business of this office, which is now in charge of the Secretary of the District Court, is more than he can cope with single-handed, and the question of giving him clerical assistance is now before Government.

31. The percentage of deeds registered in the Island in 1901 to deeds executed was 53, being an increase of 1 per cent. over 1900, but a decline on the four previous years. The following Statement C shows the progress made in the Island in this respect since the establishment of the Department in 1864, when the percentage was 13·2 :—

Table C.

Deeds executed and registered in the Island, and the Percentage of Registration, 1864 to 1901.

Period.	Deeds executed.	Deeds registered.	Percentage.	Period.	Deeds executed.	Deeds registered.	Percentage.
1864 ...	119,194	15,841	13·2	1895 ...	159,566	70,772	44·3

Mullaittivu ...	18	650	2·7	4·7	3·7	2·9	2·0	5·9	8·6	22·0

* Office established in July, 1888. The percentage in 1888–95 is shown here.

33. Ratnapura heads the list with a percentage of 79, against 67 in 1900, outstripping Kegalla and Kurunegala, which in 1900 held the first and second places respectively. Anuradhapura comes next to Ratnapura with 75 per cent., against 23 per cent. in 1900, or an increase of 52 per cent. Kurunegala comes third with 74 per cent., and is followed by Kegalla with 68 per cent., Negombo 66 per cent., Badulla 64 per cent., Chilaw 63 per cent., Matara 59, Kandy and Tangalla 57 each, Kalutara 55, and Colombo 53.

34. Thus, twelve out of eighteen offices registered over 50 per cent. of the deeds executed, which is a very satisfactory result of the steps taken by the Department to promote registration.

II.—NOTARIES.

35. There were 327 notaries practising in the Island at the end of 1901, an increase of eight on the number practising at the end of 1900, and a decrease of 73 on the number practising in 1887, the first year for which reliable figures are available.

36. The name, jurisdiction, place of office, language of practice, and date of appointment of each of the notaries practising at the end of 1901 are given in Appendix VII.

37. Fifty-seven of the notaries practised in English, 149 in Sinhalese, 56 in Tamil, 37 in English and Sinhalese, 21 in English and Tamil, and 7 in Sinhalese and Tamil.

38. They were distributed as follows :—

Western Province.		
Colombo District ...	... 86*

Total ...		327

* Of this number, 45 practised in the town of Colombo.

39. Seven notaries died in the year, viz., H. D. T. Samaranayaka of Colombo District, P. C. P. Gunatilaka of Galle District, D. A. de Alwis Karunaratna and William Van Dort of Kandy District, J. N. Paranagama of Anuradhapura District, Mariyampillai Philips of Mullaittivu District, and A. J. Senewiratna of Ratnapura District.

40. The warrant of Notary Kiri Banda Karunaratna of the Kurunegala District was cancelled upon an inquiry held by the District Judge of Kurunegala under section 2 of the Ordinance No. 21 of 1900.

41. Two notaries, viz., A. P. Perera of Kurunegala District and E. Kosu Mukamatulevvai of Batticaloa District were suspended from office, each for one year from December, 1901, upon inquiries held by the District Judges of Kurunegala and Batticaloa respectively.

42. Notary N. H. F. F. Wijeyeratne of Colombo District resigned office in July, 1901.

43. The warrants of five notaries were transferred upon their application, viz., H. Creasy from Colombo District to Kandy District, G. S. Johnpulle from Colombo District to Jaffna District, A. P. F. A. Wikramasuriya from Hambantota to Kalutara District, H. Thampu from Mannar to Jaffna District, and T. Sivasidamparam from The Islands division to the Jaffna division in the District of Jaffna.

44. Notaries A. P. J. Senewiratne of Kurunegala District, N. J. C. Wijeyesekere of Negombo District, and N. K. Nallatampi of Batticaloa District were given extended jurisdiction in their respective districts.

45. During the year eighteen notaries were appointed, viz., W. A. D. J. P. S. Jayawardana, L. W. F. de Saram, and H. L. de Mel to Colombo District; V. Casippillai, S. Sittampalam, J. C. Abraham, and S. K. Vallipuranather to Jaffna District; M. A. P. Dharmaratna to Negombo District; M. C. P. J. Nitiratna to Matara District; H. H. V. de Zoysa and C. D. S. Wijeyesekere to Galle District; A. D. Samaraweera and Cornelis de Silva to Hambantota District; S. M. P. Wijeyetileke to Matale District; J. P. Seneviratne to Kurunegala District; V. Muttiah to Mannar District; T. J. Chinnatambo to Batticaloa District; and A. P. Gunatilaka to Ratnapura District. Two of these, Messrs. V. Casippillai and L. W. F. de Saram, are proctors of the Supreme Court; A. D. Samaraweera and C. D. S. Wijeyesekere were *ex*-notaries re-instated; H. H. V. de Zoysa was appointed under the proviso to section 7 of the Ordinance No. 2 of 1877; the remaining thirteen were articled clerks who had duly served the prescribed period of apprenticeship and passed the required examinations.

46. Two examinations of notarial candidates were held by the Council of Legal Education during the year 1901, one in January and the other in October.

47. At the first examination twenty-five candidates presented themselves. Of these, twenty-four were articled clerks who had served their full term of apprenticeship, and the remaining one was admitted under the proviso of section 7 of the Ordinance No. 2 of 1877. Seventeen of the former passed the examination. They were S. Sittampalam, F. N. H. D. Prins, D. C. Wijeyasinha,

D. W. Samaranayaka, Cornelis Silva, M. P. M. Christian Perera, K. J. Perera, M. V. Perera, W. A. Perera, J. L. Jayaweera, W. B. C. Fernando, S. K. Vallipuranathar, V. Muttiah, S. Thuraiappa, J. C. Abraham, S. Veluppillai, and T. J. Chinnatambo.

48. At the second examination thirteen candidates presented themselves, all of whom were articled clerks who had duly served their term of apprenticeship. *Only* three candidates passed the examination, viz., A. Kumaraswami, C. Tilliambalam, and K. C. W. Vinasitambi.

49. The examination for admission to notarial apprenticeship was held by the Director of Public Instruction in the month of April, 1901. Of eighty-five candidates authorized to take the examination, eighty-three presented themselves, of whom eighteen were successful.

50. The names of the successful candidates and the districts for which they have been licensed are as follows :—

No.	Name of Candidate.	District of intended Practice.	Language of intended Practice.
1	T. D. Samuel Allis ...	Colombo ...	Sinhalese
2	Juanis Perera	do. ...	do.
3	P. Jorlis Dias	Kalutara ...	do.
4	S. Thampimuttoo ...	Jaffna ...	Tamil
5	K. J. Fernando ...	Negombo ...	Sinhalese

18	D. A. Ratnayake ...	Kandy ...	do.

Number, Value, and Description of Deeds executed.

51. In Appendix IX. are shown the number and value or consideration of deeds attested in each district in the English, Sinhalese, and Tamil languages in the years 1889 to 1901, with the value of the stamps used in 1894 to 1901 (information as to the value of stamps in previous years not being available), and in Appendix X. the different descriptions of the deeds so executed and the percentage registered.

52. The rise and fall in the number of deeds executed throughout the Island during the period 1864–1901 and in their value during the period 1889–1901 (the value in previous years not having been ascertained) are shown in Table A above.

53. The number of deeds executed throughout the Island in 1901 was (exclusive of certain non-notarial deeds, the exact number of which is not ascertainable) 156,674 of the value of Rs. 73,887,498, against 158,256 deeds of the value of Rs. 62,433,672 in 1900, a decrease of 1,582 deeds, but an increase in value of Rs. 11,453,826.

54. The average value of a deed was Rs. 407 in 1901, against Rs. 394 in 1900.

55. The value of stamps used on all deeds executed was Rs. 265,899 in 1901, against Rs. 251,780 in 1900, and the average value of the stamps on a deed was Re. 1·69.

56. The largest number of deeds was, as usual, executed in the Colombo District, 30,918 deeds of the value of Rs. 39,908,760, being 19 per cent. of the total number executed in the whole Island and 54 per cent. of the total value, against 19 per cent. and 47 per cent. respectively in 1900. The average value of a Colombo deed is Rs. 1,290.

57. The next largest number was executed in Jaffna, viz., 20,487 (against 21,937 in 1900) of the value of Rs. 6,036,555. The average value of a Jaffna deed is Rs. 294, being one-fourth of the value of a Colombo deed. There is a decline both in number and value compared with 1900, but the figures compare favourably with those of 1899 and preceding years.

58. Kandy follows Jaffna with 14,447 deeds of the value of Rs. 6,899,740, but with an average value of Rs. 477, which is higher than that of a Jaffna deed. The value would probably be even higher than of a Colombo deed, if all deeds affecting lands in the Kandy District were executed in Kandy. A good number of them is executed in Colombo.

59. Galle shows 14,338 deeds of the value of Rs. 3,437,650, or an average value of Rs. 239. Kurunegala shows 12,879 deeds of the value of Rs. 2,427,051, or an average value of Rs. 188. Negombo shows 12,646 deeds of the value of Rs. 4,538,302, or an average value of Rs. 359.

60. The other districts which contribute more than 10,000 deeds are Kalutara 10,525 deeds of the value of Rs. 2,368,300 and Matara 10,454 deeds of the value of Rs. 1,468,018.

61. Of the 156,674 deeds executed throughout the whole Island, 18,304 or 12 per cent. were in English, 110,706 or 70 per cent. were in Sinhalese, and 27,664 or 18 per cent. in Tamil.

III.—REVENUE AND EXPENDITURE.

62. The revenue and expenditure of the Department in each year since its creation in 1864 appear in Appendix XII. as well as in Table A above.

63. The revenue in 1901 was Rs. 230,195, against Rs. 218,338 in 1900, showing an increase of Rs. 11,857; and the expenditure Rs. 89,224, including the salary of the Registrar-General, which is not shown in the votes of the Department. The nett profit realized was Rs. 140,971.

64. The total nett gain to the Public Exchequer from this Department since its establishment has been Rs. 1,881,531·08.

65. The income, expenditure, and nett profit of each office in the year 1901 are shown in the following Table E, in which the offices are arranged in the order of the revenue they have yielded. The income of each office in each year of the period 1886 to 1901 is given in Appendix XI.

Table E.

The Income and Expenditure of each Office of the Land Registration Department during 1901.

Office.	Total Income.		Total Expenditure.		Excess of Income.		Excess of Expenditure.	
	Rs.	c.	Rs.	c.	Rs.	c.	Rs.	c.
Registrar-General	659	0	18,687	98	—		18,028	98
Colombo	52,648	50	13,690	70	38,957	80	—	
Kandy	25,282	50	9,431	2	16,851	48	—	
Negombo	20,826	75	4,867	34	15,959	41	—	
Kurunegala	18,621	75	6,676	41	11,945	34	—	
Galle	16,396	80	7,200	39	9,196	41	—	
Jaffna	16,273	25	3,577	75	12,695	50	—	
Kalutara	15,608	50	6,140	87	9,467	63	—	
Chilaw	14,857	50	2,485	32	12,372	18	—	
Matara	13,309	55	4,704	91	8,604	64	—	
Kegalla	12,567	25	3,062	64	9,504	61	—	
Ratnapura	6,987	25	1,748	79	5,238	46	—	
Badulla	4,877	25	2,831	37	2,045	88	—	
Batticaloa	4,303	50	1,715	34	2,588	16	—	
Tangalla	3,792	75	1,583	20	2,209	55	—	
Anuradhapura	1,048	75	226	90	821	85	—	
Mannar	693	75	233	18	460	57	—	
Trincomalee	407	25	359	91	47	34	—	
Mullaittivu	34	0	0	50	33	50	—	
Total ...	230,195	85	89,224	52	159,000	31	18,028	98
Deduct excess of Expenditure ...					18,028	98		
Nett excess of Income ...					140,971	33		

66. Every office shows a profit. Colombo occupies the first place with an income of Rs. 52,648 and profit of Rs. 38,957, and is followed by Kandy with an income of Rs. 26,282 and a profit of Rs. 16,851. Negombo has retained its third place with an income of Rs. 20,826 and profit of Rs. 15,959. Jaffna has fallen from the fourth to the sixth place with an income of Rs. 16,273 and a profit of Rs. 12,695, having been outstripped by Kurunegala and Galle, which now occupy the fourth and fifth places with incomes of Rs. 18,621 and Rs. 16,396 and profits of Rs. 11,945 and Rs. 9,196, respectively.

IV.—ADMINISTRATION.

67. Mr. Haughton, who relieved me in August, 1900, of my duties of Registrar-General to enable me to devote my whole time and attention to the superintendence of the Decennial Census of 1901, was promoted to the Government Agency of the Eastern Province in April last. I was then re-appointed Registrar-General in addition to the Census duties, which I continue to perform.

68. Mr. R. G. Anthonisz, the Assistant Registrar-General, who had since July, 1899, been seconded for service in the Secretariat in connection with the Dutch records, was in December last permanently provided for in that office as Archivist and Librarian, and Mr. N. W. Morgappah, who had been acting for him, was confirmed in the office of Assistant Registrar-General.

69. Mr. A. S. Abewikreme, Registrar of Lands, Kalutara, was promoted from the Second to the First Class of the Clerical Service and appointed Registrar of Lands, Kurunegala, on the retirement of Mr. R. H. Pereira in September last.

70. Mr. H. R. Abeyewardene, Registrar of Lands, Matara, was transferred to Kalutara as Registrar of Lands temporarily.

71. Mr. Mayonis Pieries, Head Clerk of the Galle Land Registry, was appointed to act as Registrar of Lands, Matara.

72. Mr. E. F. Dias, Registrar of Lands, Chilaw, reverted to the post of Clerk to the Provincial Registrar, Badulla, and was succeeded by Mr. W. C. Rubera of the Land Registry, Kurunegala.

73. An exchange of duties was sanctioned between Mr. E. J. Wijeyesinghe, Registrar of Lands, Kegalla, and Mr. A. W. Wijesinhe, Acting Registrar of Lands, Ratnapura.

74. Mr. S. D. P. Wijeyeratne was dismissed from the Public Service for misconduct in the discharge of his duties as Clerk, Land Registry, Ratnapura.

75. Besides Mr. R. H. Pereira referred to above, two other officers retired during the year, viz., Messrs. L. de Silva, Registrar of Lands, Negombo, and J. G. T. Gunatilaka, Clerk, Kandy Land Registry.

76. As a result of the operation of the new Clerical Scheme, there are at present no fewer than four important appointments of the Second Class in this Department filled by officers of the lower class on their own salaries, an arrangement undesirable in the interests of the Public Service. I have invited the attention of Government to the matter and early steps are likely to be taken to fill the vacancies by officers of the Second Class.

77. The business of the Department proceeded satisfactorily, and there were hardly any arrears at the end of the year. On the last day of the year there remained 30 deeds unregistered (against 48 deeds in 1900) throughout the whole Department. Of this number, 15 were received for registration on that day (in the Colombo Office). The remaining fifteen were "explanation deeds,"—*i.e.*, deeds the registration of which had to be deferred pending explanation of irregularities discovered in them, and were distributed thus: 6 in Kalutara, 3 in Jaffna, 2 in Colombo, 2 in Chilaw, and 1 each in Galle and Negombo.

Consolidation of Indexes.

78. The progress made in the consolidation of the local indexes is shown in Appendix XV.

79. In Colombo the indexes of the several Municipal Wards have been printed and completed. In Kandy, which has made great progress, the indexes of the A and B and C Divisions have also been printed and completed. In Badulla the index of Division B, the compilation of which was completed in October last, is in the hands of the printer. The work in the other offices has considerably advanced, as the result of the employment of a number of additional hands. The index of Division A

of Jaffna District, of which the compilation was completed early this year, is in the hands of the printer. The indexes of two important Divisions (C and M) of the Colombo District, and an index of one division of each of the following districts, viz., Kandy (D), Galle (C), Kalutara (A), Matara (A), Jaffna (E), Kegalla (A), Ratnapura (A), and Batticaloa (B), are expected to be ready for the press by the middle of this year.

80. The usefulness of the work cannot be exaggerated, an accurate and convenient index being the indispensable basis of the accurate and expeditious registration of deeds. In the course of the preparation of the indexes numerous errors and omissions were discovered in the registers, and rectified.

Office Accommodation.

81. The insufficiency of accommodation in my Head Office and the consequent inconvenience to the public as well as to the Department, which I have repeatedly referred to in my reports, still remain. Measures have been taken from time to time to improve the accommodation by utilizing all the available space in the present building by walling in the outer verandahs and providing presses reaching up to the ceiling. The accommodation has been exhausted and the need of additional space is urgent.

82. The new buildings sanctioned by Government for the Kegalla and Kurunegala Offices were completed last year and taken over by the Department. They are on an improved plan, and should be the models for future registry buildings.

83. An estimate amounting to Rs. 19,050 has been sanctioned for the construction of a new office at Chilaw, but the work has been deferred pending acquisition of the site, in regard to which the Assistant Government Agent is taking active steps. Meanwhile the business of the office is conducted under great difficulties.

84. For the Anuradhapura Office, which is growing in importance, a new and commodious office will soon be necessary. For the present, however, the Government Agent has kindly promised a room in the new court-house building, which is approaching completion.

85. The other offices in need of additional accommodation are Ratnapura and Matara.

86. In Ratnapura the need is very urgent, the business of the office being impeded and the safety of its records endangered by the want of proper accommodation. The Government Agent, who went over the office with me, was impressed with the urgency of the need, and has included provision for the necessary accommodation in a scheme he submitted to Government for improved accommodation for some offices in his own charge.

Supervision of Notaries.

87. The Ordinance No. 21 of 1900, which amended the Ordinance No. 2 of 1877 and provided for more effective supervision and control of notaries, came into operation in December, 1900. Its provisions have proved very useful in safeguarding the public interests and maintaining the efficiency and honour of the notarial profession.

88. The provision in rule 3 of sub-section 36 of section 3 of the Ordinance No. 21 of 1900 for the inspection of notaries' offices has a most salutary effect, in making a certain class of notaries more careful in their work, and in preventing them from obtaining signatures of parties on blank paper. Surprise visits paid by the Assistant Government Agent, Matale, recently to some notaries' offices have brought to light instances in which this objectionable practice has been resorted to by two notaries of Matale town, whose cases are under investigation.

89. The power to inspect offices, which is vested in Government Agents and Assistant Government Agents among others, might with advantage be extended to their Office Assistants.

90. Sub-section 35 of section 3 of the new Ordinance requires a notary to furnish the Registrar-General with explanation of any irregularity, error, or omission in the discharge of his duties. The time within which such explanation can be demanded is limited to twenty-four months from the date of such irregularity, error, or omission, a restriction which renders it necessary that the work of examination of notarial duplicates should be fairly up to date. This is not possible, however, without an appreciable addition to the examining staff.

91. Section 2 of the amending Ordinance, which prescribes the course for dealing with peccant notaries, was resorted to successfully in the case of three notaries, one of whom (K. B. Karunaratna) was dismissed, and the others (Kosu Mukamatulevvai and A. P. Perera) were suspended for twelve months each. In addition to the above, several cases were instituted against notaries and others in connection with irregularities and frauds that were discovered. The more important of them are mentioned below.

92. Deed No. 447 of 12th October, 1900, attested by Notary S. G. D. Z. W. Siriwardena, was found to be a forgery in P. C., Matara, case No. 5,145, and the accused (four persons) were committed for trial before the Supreme Court. They were all convicted and sentenced to rigorous imprisonment, the first, third, and fourth accused to five years each, and the second to two years.

93. A prosecution was instituted against three persons in P. C., Matara, case No. 6,939, for attempting to cheat by false personation. They were tried in the Supreme Court, and the first and second accused were found guilty and sentenced to rigorous imprisonment, the first for five years and eight months and the second for six months.

94. Deed No. 3,933 of 25th March, 1901, of Notary W. A. M. Perera, was found to be a forgery in P. C., Kegalla, case No. 22,510. The two accused were tried by the Supreme Court and sentenced to rigorous imprisonment, the first for five years and the second for three years.

95. Deed No. 1,908 of 29th April, 1901, of Notary G. J. Abeyasekera, was declared a forgery in P. C., Kegalla, case No. 22,701. There were five accused in this case, but only the third accused was found guilty by the Supreme Court and sentenced to three years' imprisonment.

96. A deed bearing No. 13,684, and alleged to have been attested on 30th March, 1895, by Notary D. B. de S. Samarasinha of Galle District, was on its being presented for registration found to be a forgery, and the document has been forwarded to the Government Agent in charge of Police, Galle, for investigation. The result of the investigation has not yet been communicated.

97. Deeds No. 7,370, dated 28th December, 1870, and No. 20119, dated October 15, 1893, both alleged to have been executed before the deceased Notary W. G. E. de S. Rajakaruna, were declared by the District Judge, Galle, to be forgeries. The Government Agent in charge of Police, Galle, has been requested to make inquiry regarding these cases with a view to bring the offenders to justice, and the result of the inquiry is awaited.

Legislation.

98. The Bill drafted by me by order of Government to consolidate and amend the law now scattered over many years and pages of our Statute Book has not yet become law. The Bill consists of two parts: (1) Registration of titles to land after investigation and settlement of claims; and (2) registration of deeds pending registration of titles.

99. The registration of deeds has been in operation since the establishment of this Department, and the second part of the Bill provides remedies for long-admitted defects, and seeks to make the registration efficient and to safeguard the public. The other part of the Bill remedies defects brought to light when the registration of titles was brought into operation in the years 1887–1891 in some villages in the Colombo District, provides an improved procedure, transfers the cost of working the measure from the Public Exchequer to the persons who benefit by the registration, and leaves it to the discretion of the Governor in Executive Council to bring the measure into operation in any particular place.

100. The author of the law and procedure now in force regarding the registration of titles was Sir Richard Cayley, late Chief Justice, who as Attorney-General drafted the Bill and passed it through the Legislative Council in 1877. The present Bill was submitted to him in England, and he was good enough to go over it carefully and to send me suggestions for its improvement. In doing so he wrote (under date 8th September, 1898):—

> The new measure is certainly a great improvement on the old Ordinance No. 5 of 1877, of which I was the author. The subject is certainly a very difficult one, but your draft Ordinance seems to meet the objections to the former enactment.

101. On the 12th October, 1898, His Excellency the Governor appointed a Committee, presided over by the Attorney-General (Hon. Mr. Layard), and including experienced lawyers and notaries (Messrs. Julius, F. J. de Saram, and W. P. Ranasinghe), to consider and report on the Bill. The Committee devoted considerable labour and attention to the Bill, sitting week by week during eighteen months, adopted nearly all Sir R. Cayley's suggestions, and added numerous amendments of their own, and on the 26th April, 1900, submitted the Bill so revised to Government with a unanimous report in its favour.

102. The Bill was then introduced into the Legislative Council by the Attorney-General at the last Sessions and passed its first and second reading *nem. con.*, and was referred to a Sub-Committee, which on 30th March, 1901, returned the Bill to the Council with some slight amendments and unanimously reported in its favour. The Bill next came before the Council on the 31st July for its third reading, but for want of time was postponed to the following sitting of 2nd August, when, again, owing to pressure of other business, and as the Sessions had to be closed on that day, the consideration of the Bill was further postponed.

103. It has been since decided by Government to proceed with the Bill in respect of the portion dealing with the registration of deeds, deferring the portion relating to registration of titles to be taken up later.

Registrar-General's Office,
Colombo, April 30, 1902.

P. ARUNACHALAM,
Registrar-General.

APPENDIX.

I.—The Business, Revenue, and Expenditure of the Land Registration Department in 1900 and 1901.

			1897.				
Matara ...	3	A	May	1	Arranged names in dictionary order and fair-copied.	Fair-copying.	One clerk was only partly engaged in this work.
			1897.				
		C	June	7	18/90 to 9/1 and 4/187 to 1/1, checked 103/314 to 99/249	Checking entries.	—
Negombo ...	4	E	November	3	18/123 to 1/1, checked 85/384 to 79/1		One of the clerks was partly engaged in this work.
Ratnapura ...	2	A	August	25	Checked and revised entries.	Arranging entries in dictionary order.	—

VITAL STATISTICS.

REPORT OF THE REGISTRAR-GENERAL OF CEYLON FOR 1901.

I.—POPULATION.

THE population of Ceylon as enumerated on March 1, 1901, was 3,565,954 persons, exclusive of the military and shipping population. The estimated increase from that date to the end of December, 1901, amounted to 40,875, being the excess of births over deaths registered, plus the excess of arrivals over departures of Indian coolies. This number being added, the estimated population on December 31, 1901, would be 3,606,829. The rates for each year of the decade ending December 31, 1900, have been re-calculated according to the results of the last Census.

2. *Indian Immigration.*—The total number of Indian coolies who arrived in 1901 was 120,603, as against 118,343 departures.

3. Table A shows the arrivals and departures of Indian coolies in the period 1871–1901. The largest number of arrivals recorded in any year previous to 1900 was in 1876 and 1877, when the Indian famine drove a large number of coolies to Ceylon, causing an excess of arrivals of over 70,000. The tide of immigration was arrested in 1879 in sympathy with the general depression that followed the downfall of the coffee enterprise. In the years 1879–1886 the usual excess of arrivals over departures was turned into a deficit.

4. In 1887 the return of better times, consequent on the increase of tea cultivation, was accompanied by an excess of arrivals, which reached its highest point in 1892 (48,856), and fluctuated in subsequent years till it turned into a deficit of 13,236 in 1899, a deficit attributed to good harvests in Southern India and to the closing of the northern immigration route. In 1900 there was a sudden and striking rebound, showing in spite of so many as 113,000 departures the unprecedented excess of 95,000 arrivals. In the year under report the number of arrivals fell to 120,603, while the number of departures rose to 118,343, leaving an excess of 2,260 immigrants over emigrants.

Table A.—Arrivals and Departures of Indian Coolies, 1871–1901.

Year.	Arrivals.	Departures.	Excess or Deficit.	Year.	Arrivals.	Departures.	Excess or Deficit.
1871	88,529	58,610	29,919	1888	82,587	55,805	26,782
1872	80,121	74,035	6,086	1889	61,735	52,619	9,116
1873	89,012	80,629	8,383	1890	84,106	45,756	38,350
1874	125,156	89,727	35,429	1891	103,149	60,042	43,107
1875	86,712	95,519	—8,807	1892	116,472	67,616	48,856
1876	164,797	91,960	72,837	1893	91,676	73,181	18,495
1877	167,196	88,609	78,587	1894	85,256	66,292	18,964
1878	101,093	91,188	9,905	1895	123,611	80,673	42,938
1879	76,897	80,750	—3,853	1896	128,350	93,281	35,069
1880	45,600	73,683	—28,083	1897	153,075	109,213	43,862
1881	53,887	63,240	—9,353	1898	136,864	105,706	31,158
1882	50,907	57,820	—6,913	1899	68,393	81,629	—13,236
1883	39,204	52,962	—13,758	1900	207,994	112,936	95,058
1884	45,777	50,085	—4,308	1901	120,603	118 343	2,260
1885	47,794	48,863	—1,069				
1886	39,907	45,250	—5,343	Total	2,939,120	2,321,143	617,977
1887	72,660	55,121	17,539				

5. *Population, Registration, and Trade in 1871–1901.*—Tables I. and II. in the Appendix show the population estimated in the middle of each year from 1867 (when the registration laws first came into operation in the Island), the number of births, marriages, and deaths registered in each year, and their proportion to 1,000 persons living, and the yearly difference between registered births and deaths and between immigrants and emigrants.

6. The population increased in the thirty-one years 1871–1901 from 2,417,000 to 3,580,000 in round numbers; that is, by 1,163,000, or over 48 per cent. About half of this increase was due to immigration. The annual growth of the population in the period 1871–1881 was 13·2 per 1,000, 8 per 1,000 in 1881–1891, and 17·3 per 1,000 in 1891–1901. At the last-mentioned rate the population should double itself in forty years.

7. *Race Distribution.*—Table III. shows the estimated population of each race in the Island, the number of persons of each race registered as married, born, or dead, with their rates per 1,000 persons living, in the years 1900 and 1901, as well as the averages for the period 1891–1900. Tables IV. and V. give the number of births, marriages, and deaths registered in that period, with their rates for each Province and District.

8. The numbers of each race and the proportion of each to a thousand of the total population are shown in the following table for the years 1891 and 1901 :—

Table B.—Race Distribution of the Population, 1891 and 1901 (exclusive of the Military).

Race.	At the Middle of 1891.	At the Middle of 1901.	Proportion to 1,000. At the Middle of 1891.	At the Middle of 1901.
Europeans ...	4,725	6,300	1·6	1·7
Burghers ...	21,303	23,556	7·0	6·6
Sinhalese ...	2,050,206	2,341,608	678·5	653·6
Tamils ...	727,346	957,270	240·7	267·2
Moors* ...	198,124	228,455	65·6	63·8
Malays ...	10,188	11,905	3·4	3·3
Others ...	9,687	13,603	3·2	3·8

9. It will be seen that since the Census of 1891 the proportion of the various sections of the population has decreased in the case of all the races, except the Tamils and the nondescript class shown as "Others." The Tamils have increased by 26 per mille, the result mainly of Indian immigration, which has added over one-fourth of a million in the last ten years. The decline in the proportion is most marked among the Sinhalese, and amounts to 24 per 1,000.

II.—MARRIAGES.

10. The marriages registered in 1901 numbered 23,736, of which 16,227 were "general" (*i.e.*, other than Kandyan or Mohammedan) marriages and 7,509 Kandyan marriages. The marriage rate (*i.e.*, the proportion of persons whose marriages were registered in 1901 to 1,000 persons living) was 14·2, which is less than the rate for the preceding year, and the mean rate for the decade 1891 to 1900 by 3·0 and 0·7 respectively. The diminution, as compared with the previous years 1899 and 1900, was more especially in regard to the number of Kandyan marriages.

11. The proportion of the number of persons (other than Mohammedans) whose marriages were registered in 1901 and 1900 and the average in the decade 1891 to 1900 to 1,000 persons living is shown in Table C. The figures are based solely on the registered marriages, and take no account of the marriages legally contracted among non-Kandyan Sinhalese Buddhists and among Hindus according to customary and religious rites, but not registered. This accounts for the low rate among the Tamils, who are mostly Hindus.

Table C.—Marriage Rates among the different Races, 1901, 1900, and 1891–1900.

	1901.	1900.	1891–1900.
All Races (excluding Mohammedans) ...	14·2	17·2	14·9
Europeans ...	19·7	16·4	23·5
Burghers ...	14·5	14·5	15·0
Sinhalese ...	17·2	21·1	18·2
Tamils ...	7·0	7·5	6·9
Others ...	1·6	2·3	1·4

12. Table D below shows the Kandyan marriages, general marriages, their total, and the proportion of the number of persons married to 1,000 persons living in 1871–1901.

13. The Kandyans are, as a rule, indifferent to registration, though the law makes the issue of their unregistered marriages bastards. The number of marriages registered among them varies with the pressure applied to them by the Government Agents, who, under instructions from Government, made special efforts in 1894, 1895, 1899, and 1900, and secured the registration of marriages of large numbers of couples who had been living together as husband and wife according to Kandyan custom.

14. Thus, as many as 16,801 Kandyan marriages were registered in 1895 and almost 16,000 in 1899. In 1900 apparently the pressure was relaxed, and there were 4,685 fewer Kandyan marriages registered than in 1899. In the year under report the number of Kandyan marriages registered (7,509) was less than in the previous year by 3,765, but nearly equal to the normal number for the three years immediately preceding 1899. The variation in the number of Kandyan marriages introduces a very uncertain element in the calculation of the general rate of the Island, as will appear from Table D.

Table D.—Kandyan and General Marriages, their Total, and the Rates of the Number of Persons married to 1,000 Persons living, 1871–1901.

Year.	Kandyan Marriages.	General Marriages.	Total.	Rate per 1,000.	Year.	Kandyan Marriages.	General Marriages.	Total.	Rate per 1,000.
1871 ...	20,836	11,178	32,014	28·5	1887 ...	7,930	9,241	17,171	13·0
1872 ...	8,083	9,605	17,688	15·5	1888 ...	4,516	10,122	14,638	10·9

1883 ...	5,664	10,230	15,894	12·3	1899 ...	15,959	16,535	32.494	20·1
1884 ...	3,986	9,784	13,770	10·6	1900 ...	11.274	16,918	28.192	17·2
1885 ...	3,144	7,579	10,723	8·2	1901 ...	7,509	16,227	23,736	14·2
1886 ...	12,157	8,057	20,214	15·4					

* The term "Moor," which has long been used in the Department, is rather misleading. It is a relic of the Portuguese in Ceylon, who gave the Ceylon Mohammedans the name of their co-religionists in Morocco. In Ceylon the term means Mohammedans (other than Malays) born in Ceylon or Southern India and speaking Tamil as their mother tongue and mostly of Tamil descent. The "Malays" are descendants of Malay Mohammedans mostly introduced to the Island by the Dutch. "Others" includes Afghans, Arabs, natives of Northern India, Chinese, Negroes, &c.

15. *Mohammedan Marriages.*—The Ordinances Nos. 8 of 1886 and 2 of 1888 regarding the registration of Mohammedan marriages were in 1900 in force in the Western, Central, Southern, North-Western, North-Central, Uva, and Sabaragamuwa Provinces, and in the Batticaloa District of the Eastern Province. In August, 1901, the Northern Province, including the Districts of Jaffna, Mannar, and Mullaittivu, was also brought under the operation of the Mohammedan Marriage Registration Ordinances. It will be seen from the following Table E that, except in the Puttalam and Galle Districts, and this year also in the Ratnapura District, the Mohammedans have availed themselves but little of the opportunity of registering their marriages. In these districts the rate of persons married to 1,000 persons living per annum was 18·6 and 18·5 respectively. But Batticaloa, the chief Mohammedan district in the Island, shows 1·2 per 1,000, and Colombo, with the next largest Mohammedan population, 5·8 per 1,000:—

Table E.—Mohammedan Marriages in 1891–1900, 1900, and 1901.

16. *First Marriages; Re-Marriages.*—Of each 1,000 men married in the general community, 902 were bachelors and 98 widowers; of each 1,000 women married, 965 were spinsters and 35 widows. Among the Kandyans, of each 1,000 men married, 860 were bachelors and 140 widowers; of each 1,000 women married, 906 were spinsters and 94 widows.

17. In the general community, of the 14,642 bachelors who married during the year, 14,271 or 98 per cent. married spinsters and 371 or 2 per cent. married widows; of the 1,585 widowers who re-married, 1,396 or 88 per cent. married spinsters and 189 or 12 per cent. married widows; of the 15,667 spinsters who married during the year, 14,271 or 91 per cent. married bachelors and 1,396 or 9 per cent. married widowers; of the 560 widows who re-married, 371 or 66 per cent. married bachelors and 189 or 34 per cent. married widowers (Table VIII. in Appendix).

18. Among the Kandyans, of the 6,465 bachelors who married during the year, 6,056 or 94 per cent. married spinsters and 409 or 6 per cent. married widows; of the 1,044 widowers who re-married, 744 or 71 per cent. married spinsters and 300 or 29 per cent. married widows; of the 6,800 spinsters who married, 6,056 or 89 per cent. married bachelors and 744 or 11 per cent. married widowers; of the 709 widows who re-married, 409 or 58 per cent. married bachelors and 300 or 42 per cent. married widowers (Table IX.). For the purposes of the calculation in this and two preceding paragraphs, 275 divorced men and 226 divorced women have been treated as bachelors and spinsters respectively.

19. *Divorces.*—Divorces among the general community are granted by the District Courts; among the Kandyans by the Government Agents and their Assistants. There were 612 divorces among the Kandyans this year (Table XIII.), making the proportion to the marriages in the year 8 per cent., a rate eighty times as large as in the general community (·14 per cent.), the total number of divorces pronounced in the several District Courts of the Island in 1901 being 24, against 16,227 general marriages registered in the year.

20. It would thus appear that the Kandyans are more anxious to escape from the bonds of matrimony than other sections of our population, except the Mohammedans, of whose divorces we have no statistics. This may perhaps be explained by the greater facilities afforded by the Kandyan Marriage Ordinance than by the General Marriage Ordinance for obtaining divorces. Divorces among the Kandyans are obtainable, among other reasons, by mutual consent, or on the ground of inability to live happily together, and need leave no stain on the character of the divorced woman.

21. *Re-marriages of divorced Persons.* — Among the general community 25 divorced men and 12 divorced women re-married in the year; among the Kandyans 250 divorced men and 214 divorced women, against 267 divorced men and 236 divorced women in 1900.

22. *Minors.*—The number of males under 21 years of age who married in the year 1901 was 756 among the general community and 915 among the Kandyans; and the number of female minors was 8,206 in the general community and 4,863 among the Kandyans.

23. The number of mixed marriages registered was as follows (Table XI. in Appendix and E 1 below):—

Table E 1.

	1901.	1900.	Mean in the Period of 1891-1900.
Between Europeans and Burghers	10	10	11
Between Europeans and Sinhalese	4	—	2
Between Europeans and Tamils	—	—	—
Between Burghers and Sinhalese	22	37	27
Between Burghers and Tamils	6	11	5
Between Sinhalese and Tamils	69	67	53
Other Mixed Marriages	10	15	5

24. *Signatures in Marriage Register.*—Of the men in the general community who married in the year 1901, 25 per cent. (as against 24 per cent. in 1900) and of the women 75 per cent. (as against 77 per cent. in 1900) were unable to sign their names in the register with letters (Table VIII.); and among the Kandyans, who usually show a higher proportion of illiterates, 38 per cent. of the men (as against 36 per cent. in 1900) and 97 per cent. of the women (as against 96 per cent. in 1900) were unable to sign their names (Table IX.).

25. *Age at Marriage.*—Among the general community this year the mean male age at marriage was 27·3, the same as in the preceding year and in 1899; for females 20·9, as against 21·0 last year. Among the Kandyans the mean age at marriage for males was 27·7 (as against 29·0 last year), and for females 21·5, the same as last year.

26. The highest age at marriage in 1901 was, in the general community, for males 90 years, for females 85 years; and among the Kandyans, for males 85 years, and for females 60 years. The lowest age at marriage both in the general community and among Kandyans was 16 for males and 12 for females.

27. The mean and maximum ages are probably misleading, for in many cases the parties would appear to have contracted marriages according to their religious customs, and lived together as husband and wife for years before registering the marriage.

28. *Buildings registered for the Solemnization of Marriages.*—The number of buildings registered for the solemnization of Christian marriages and whose registration had not been cancelled at the end of 1901 was 756, of which 476 were Roman Catholic, 110 Church of England, 77 Wesleyan, 20 Salvation Army, 19 Baptist, 19 Congregationalist, 19 Independent Catholic, 7 Dutch Presbyterian, 6 Portuguese Roman Catholic, and 2 Scotch Presbyterian.

III.—BIRTHS.

29. The births registered during the year 1901 numbered 134,252, and were equal to a rate of 37·5 per 1,000 persons living. This rate was slightly below the rate for the preceding year (38·6) and the average for the years 1897 to 1900, the period of improved registration of births, but was above the average for the decade 1891 to 1900 by 3·1. The diminution in the rate as compared with the previous year may be attributable to the falling off of the marriage rate in 1900 from that of the preceding year 1899.

30. The number of births registered and the rates in each of the years 1867 to 1901 are shown in Tables I. and II. in the Appendix. The number of births and their rates are shown for each of the years 1901 and 1900 and the average rate for the decade 1891 to 1900 in Table III. according to races; in Tables IV. and V. according to Provinces and Districts; Tables VI. and VII. (*a*) and (*b*) show separately the Sinhalese, Tamil, and Mohammedan births and deaths for 1901 and 1900, and their rates for the various subdivisions of the Island in 1891 to 1900 and 1901.

31. The registration of births in the early years of civil registration was very imperfect, and improved gradually after 1887, when under a provision in the Penal Code prosecutions began to be entered against those who neglected the registration of births, and other steps were taken to ensure registration. The improvement has become marked since 1897, in July of which year the Ordinance No. 1 of 1895 came into operation.

32. The subjoined Table F, in which the birth-rates in the several districts for 1901 are arranged in descending order, shows also the amount of increase or decrease in 1901 compared with the averages in the periods 1897 to 1900 and 1891 to 1896 :—

Table F.—Comparative Statement of the Mean Annual Birth-rates in the Periods of 1891–1896 and 1897–1900 and 1901.

Nuwara Eliya ...	24·3	27·1	28·5	—2·8	—4·2	—1·4

33. The birth-rate for the Island during the year (37·5) was below the rate for the preceding year (38·6) and the average (38·4) for the years 1897–1900, the period during which registration of births received a great impetus by the introduction of the Ordinance No. 1 of 1895. The average rate for the period immediately preceding, 1891 to 1896, was greater by 5·8 per 1,000. While only four of the twenty-one districts, viz., Batticaloa, Badulla, Negombo, and Nuwara Eliya, show a decrease in the birth-rate for 1901 as compared with the average for the period 1891 to 1896, fourteen districts show a decrease as compared with the average for the period 1897 to 1900, the exceptions being Anuradhapura, Trincomalee, Mullaittivu, Jaffna, Matara, Hambantota, Galle, and Chilaw.

34. Anuradhapura District, which does not usually occupy a high position in regard to its birth-rate, ranks this year as the first, with a birth-rate of 47·9, followed by Trincomalee (44·6), Kurunegala (43·6), Mullaittivu (43·5), Jaffna and Batticaloa (42·9), Matara (42·5), Ratnapura (41·4), and Matale (41·1). In four of these districts, however, viz., Kurunegala, Batticaloa, Ratnapura, and Matale, the rates were below the average. The lowest birth-rates were, as usual, in Nuwara Eliya (24·3), Colombo, (30·6), and Kandy (33·5). Each of the above districts showed a deterioration from the average for 1897 to 1900.

35. The births and their rates for the years 1901, 1900, and the average for 1891 to 1900 among the different races of the Island appear in Table III., and their rates are compared in the Table G below, from which it will be seen that all the races, except Europeans and Moors, show an improvement on the average. The Tamils, Malays, and "Others" show increased birth-rates, both as compared with the last year and the average. The birth-rates among Burghers and Sinhalese show a deterioration from last year, and among Moors a deterioration from the last year as well as the average.

36. *Sex.*—Of the 134,252 births registered in the year, 68,888 were males and 65,364 were females, the former being to the latter in the proportion of 1,054 to 1,000 (Tables XIV. and XV.).

37. *Legitimacy.*—I have since 1898 omitted as misleading the information which used to be given as to legitimate and illegitimate births. Except among the Kandyan Sinhalese, registration is not essential to the validity of a marriage, and a large number of the people are content with the customary or religious ceremonies of marriage and do not register it. So strong, however, is the public sentiment in favour of matrimony that almost every marriageable girl is married, and to secure this parents, brothers, and other male relations often make great sacrifices.

38. There was a doubt as to the validity in law of a marriage contracted without registration, but it has been dispelled by the decisions of the highest court. Even if it had been otherwise, it is rather a misnomer to designate as illegitimate the issue of such unions. Even the Kandyan Sinhalese in spite of the Ordinance No. 3 of 1870, continue, as I have said before, to ignore the registration of marriages (except when pressed by the Government Agents) and to breed children whom the law deems bastards, but who are according to public sentiment quite legitimate.

39. There is, on the whole, in Ceylon comparatively little of what would be considered illegitimacy in Europe, the fruit of immorality on the part of parents, and what illegitimacy exists is mainly in towns where a foreign population has called into existence a class of unfortunate women, both natives and foreigners.

IV.—DEATHS.

40. The deaths registered in 1901 numbered 98,813, and were in the proportion of 27·6 to 1,000 persons living, as against 100,873 and 28·7 in the previous year.

41. The number of deaths registered and the rates in each of the years 1867 to 1901 are given in Tables I. and II. in the Appendix. Till within the last ten or twelve years the registration of deaths was not performed with much care, and the figures, especially for the earlier years, probably understate the mortality.

42. The rate rose from 19·4 in 1871 to 31·7 in 1877, a year distinguished by a severe epidemic of cholera and by a large mortality among the Indian immigrants who were driven by famine to Ceylon. The death-rate fell (as happens not unusually after a period of high mortality) to about 2 ' per 1,000 and below in 1879 and 1880, rising in 1885 to close on 30, a rate which, except in 1889 and 1893, was not approached. The mortality steadily declined from 1893 till it reached 23·7 in 1897, from which it rose to 26·6 in 1898 and 30·6 in 1899. In 1900 the rate fell to 28·7 and this year to 27·6. The reduction in spite of improved registration is an indication of improved health.

43. *Race.*—The number of deaths and their rates for each of the years 1900 and 1901 and the average for the decade 1891 to 1900 are given for the various races in Table III. in the Appendix. The rates for 1900 and 1901 and the average rates for the years 1891 to 1900 are compared below :—

Table G.—Birth- and Death-rates among the different Races in the Island, 1891–1900, 1900, and 1901.

Nationalities.	Birth-rates.			Death-rates.		
	Average, 1891–1900.	1900.	1901.	Average, 1891–1900.	1900.	1901.
All Races ...	34·4	38·6	37·5	27·6	28·7	27·6
Europeans ...	28·5	20·2	24·4	20·9	17·8	23·6
Burghers ...	20·5	29·1	29·0	18·8	23·7	21·1
Sinhalese ...	36·7	42·8	41·1	27·0	28·1	25·3
Tamils... ...	28·1	29·0	29·4	28·3	29·6	32·9
Moors	37·4	39·0	36·9	30·7	30·7	29·6
Malays... ...	22·5	28·2	29·8	25·5	34·2	27·6
Others	10·6	8·3	12·4	14·6	15·1	27·3

44. Compared with the average for 1891 to 1900, all the races, except the Sinhalese and Moors, show enhanced death-rates. Compared with the year 1900, all the races show improved death-rates, except the Europeans, Tamils, and "Others." The highest death-rate was among the Tamils (32·9), against an average of 28·3 and a rate of 29·6 for the previous year. The Burghers, as usual, showed the lowest death-rate (21·1), which is below the rate for the preceding year (23·7), but higher than the average (18·8).

45. *Sex.*—Of the 98,813 deaths registered during the year, 50,977 were of males and 47,836 of females. The death-rates per 1,000 persons living were 26·8 for males and 28·5 for females, while the average rate for the ten years 1891 to 1900 were 26·7 and 28·7 respectively. The proportion of male deaths to female deaths was as 1,066 to 1,000, the average in the period 1891 to 1900 being 1,053 to 1,000. These proportions are derived from unequal numbers of males and females living, for there is an excess of males in the population. In the year 1901 had the population comprised an equal number of males and females, there would have been 826 male deaths to every 1,000 female deaths, as against an average in the ten years 1891 to 1900 of 930 males to 1,000 females.

46. *Age at Death.*—Tables XVI., XVII., and XVIII. in the Appendix give the population, deaths, and their rates for the Island at the different age periods in the years 1901, 1900, and the average for 1891 to 1900, and Table XIX. gives the infant mortality in the various Provinces and Districts in those years.

47. The mortality of males and females separately and of both sexes together at the different age periods is compared in the following Table H for the years 1901 and 1900 and the average for 1891 to 1900 :—

Table H.—Annual Rate of Mortality per 1,000 Living at different Ages.

Ages.	Ten Years 1891–1900.			1900.			1901.			Increase or Decrease* in 1901 compared with the Average of 1891–1900.

* The sign minus (—) denotes decrease.

V.—PUBLIC HEALTH.

48. The general health of the population during the year 1901 was satisfactory, the death-rate for the year (27·6) being the same as the average for the decade 1891 to 1900, and a decline as compared with the rate for the previous year. The greatest improvement was in the North-Western Province, where the death-rate declined to 25·7 from its average 34·8 and the rate for the preceding year 32·8. The Province of Uva showed the greatest deterioration in health, its death-rate during the year—the highest among the Provinces of the Island—rising to 40·6 from the average 35·6. The lowest death-rate was, as usual, in the Western Province, 22·6, which is less than the rate for the previous year by 1·0 per 1,000, but higher than the average rate by 1·7. The Northern Province, which was the second healthiest Province in the Island last year, has this year yielded its place to the North-Western Province, and shows a death-rate of 26·1, which is closely followed by the Southern Province with 26·2.

49. With regard to the discrepancy in the number of cholera deaths in 1900 between my Administration Report for last year and that of the Principal Civil Medical Officer, I have after correspondence with the different provincial registrars been able to trace 149 deaths. There were 58 in the Central Province and 61 in the Province of Uva, which had been registered as due to "vomiting and purging"; 13 in the Province of Uva, which had been registered as due to other causes; 7 in the North-Central Province registered in 1901; 5 in the Central Province and 2 in the North-Western Province, which had escaped registration, and which I have caused to be registered in the present year; and 3 in the Province of Sabaragamuwa, which, however, yet remain unregistered owing to the absence of particulars as well as a qualified informant. From the above it will be observed that the discrepancy was mainly due to an error of nomenclature, as many as 119 being registered as due to vomiting and purging, which the Assistant Provincial Registrar, Matale, states is an expression locally used for cholera. The remaining 90 deaths, which would make up the total discrepancy of 239, were distributed as follows:—63 in Uva, 17 in the Central Province, 7 in the Western Province, and 3 in the Eastern Province. These cannot be traced for want of correct and full particulars. The Provincial Registrar, Uva, in whose Province remains the largest item of the discrepancy yet unaccounted for, explains that he is unable to trace them, owing probably to incorrect names being given in the lists of the medical officers.

50. With a view to avoid similar discrepancies in future, I have with the co-operation of the Principal Civil Medical Officer arranged, in addition to the existing practice in vogue since 1896, that no deaths should be registered as due to cholera unless certified as such by a Government medical officer, that a copy of the entries of deaths due to cholera appearing in the medical officer's register of cholera should be transmitted at the end of each month to the provincial registrar of the Province, who will take steps to make the number registered by the registrars of his Province to correspond with the number shown by the Medical Department. And it is hoped that this arrangement will prevent all discrepancies between the number of registered cholera deaths and the number reported by the Principal Civil Medical Officer.

51. Fifty-two deaths were registered during the year under report as due to cholera, 23 from Badulla, 15 from Jaffna, 7 from Anuradhapura, 4 from Negombo, 2 from Kurunegala, and 1 from Kandy.

52. The Tables VI., VII. (*a*) and (*b*), and XXII. in the Appendix give the births and deaths and their rates in the several subdivisions in the Island. The figures are given for the Sinhalese only in the Sinhalese districts and for the Tamils only in the Tamil districts. In the Puttalam District, where the Sinhalese, Mohammedans, and Tamils are found in almost equal numbers, and in the Batticaloa District where the Tamils and Mohammedans are almost equal in numbers, the figures are given for these races separately. These separate figures furnish more trustworthy data for comparing the relative sanitary condition of these districts than if the rates included other nationalities temporarily resident in them. The infantile mortality, which is generally accepted as the most sensitive test of the health of a place, is also included in these tables.

Health of the Sinhalese.

53. The subjoined Table I. gives the estimated Sinhalese population at the middle of 1901, the births and deaths, and their rates for the years 1900 and 1901, with the averages for the years 1891 to 1900:—

Table I.—Sinhalese Population, Births, and Deaths, and their Rates in the Provinces of Ceylon in 1891–1900, 1900, and 1901.

Province.	Estimated Population at the middle of the Year 1901.	Births.			Deaths.			Proportion per 1,000 of the Population. Births.			Deaths.		
		Average in 1891-1900.	1900.	1901.	Average in 1891-1900.	1900.	1901.	Average in 1891-1900.	1900.	1901.	Average in 1891-1900.	1900.	1901.

54. The healthiest Sinhalese Province in the Island was, as usual, the Western (19·8), the healthiest district was Negombo (16·8), and the healthiest division was Pitigal korale south (14·0).

55. *Western Province.*—The Western Province, which is the smallest of the Provinces in area, but contains the largest population, more than a fourth of the entire population of the Island, of whom about 765,000 are Sinhalese, showed a death-rate of 19·8 per 1,000, as against an average of 19·0 for the decade 1891 to 1900.

56. The Negombo District, which since 1896 used to be the healthiest district in the Island, except last year, when it was surpassed by Chilaw, Colombo, and Kalutara, has this year regained its position as the healthiest district in the Island, and showed a death-rate of 16·8, which is less than the average for the decade 1891 to 1900 by 3·7 per 1,000.

57. The improvement was shared by each of its three subdivisions, of which the healthiest was Hapitigam korale (15·3), and the unhealthiest, as usual, the Negombo Local Board (28·5). There were four cases of cholera in the district, all of which were registered in the first quarter of the year.

58. The Colombo District ranks second in point of health among the districts of the Western Province and third in the Island (the second healthiest district in the Island being Chilaw), and showed a death-rate of 19·8, a deterioration from the average 18·4.

59. The health of the subdivisions was on the whole less satisfactory than usual, the death-rates ranging from 14·8 in Siyane korale east, the healthiest subdivision, to 34·5 in the Colombo Municipality, which was the unhealthiest division in the district, and in fact in the Province. Statistics for Siyane korale east and other new divisions marked * were not hitherto separately made up as the present subdivisions were first taken into account for statistical purposes since the Census of 1901. The infantile death-rate in the Colombo Municipality for the year was as high as 341 per 1,000 births registered. The Colombo Municipality division is more fully dealt with in Chapter VIII. (p. 15 *infra*).

60. Kalutara District, which till five years ago used to be about the healthiest district in the Island, is this year the unhealthiest in the Province, and shows a death-rate of 21·8, as against an average of 19·3. All its subdivisions deteriorated in health. Kalutara Local Board, which as usual is the unhealthiest division in the district, showed an increased death-rate (31·8), as against the average (24·9). Pasdun korale, which was hitherto shown as one division, and used to be the healthiest in the district, has been subdivided into two divisions, Pasdun korale east and Pasdun korale west, for which the figures are separately recorded for the year under report. The eastern division (17·8) now claims to be the healthiest division in the district, while the western portion is only better than the unhealthiest division (Kalutara Local Board). In Kalutara, totamune and Rayigam korale the death-rates rose to 22·5 and 19·9 from their averages 19·4 and 18·5 respectively.

61. *Central Province.*—The Sinhalese in the Central Province who number about 290,000 enjoyed better health than usual, their death-rate for the year (27·2) being lower than the average for the decade 1891 to 1900 by 3·9 per 1,000. Each of its three districts, Kandy, Matale, and Nuwara Eliya, showed improved death-rates as well as improved birth-rates.

62. In the Kandy District, which contains a larger population than Matale and Nuwara Eliya combined, the death-rate (26·1) was an improvement on the average (29·0), and the birth-rate rose to 45·3 from an average of 40·3. The infantile mortality was in the proportion of 171 per 1,000 births registered.

63. In six of its ten subdivisions the death-rates of the Kandy District were lower than the average, while the other four divisions showed higher rates. The greatest diminution was in Tumpane, where the mortality rate fell to 27·0 from its average 36·6, and in Pata Hewaheta, whose death-rate diminished to 22·2 from its average 28·5. Uda Dumbara showed the highest death-rate (29·9), but this was an improvement on the average (35·5). The healthiest division was, as usual, Uda Bulatgama (20·7, average 18·4). The four divisions which showed increased death-rates were Kandy Municipality, Uda Bulatgama, Udunuwara, and Uda Palata. The greatest increase was in Kandy Municipality, where the death-rate rose to 28·6 from its average 24·3. In this division the infant mortality was as high as 222 per 1,000 registered births. Nine of the ten subdivisions showed improved birth-rates, the exception being Pata Hewaheta, where the reduction, however, was slight (47·0, average 47·2).

64. Matale District showed an improvement in health during the year, the death-rate falling to 31·0 from an average of 40·7. All its four subdivisions contributed to this improvement, especially Matale south and Matale north, where the death-rates fell to 27·5 and 31·7 from their respective averages 39·1 and 42·2. The healthiest division was Matale south (27·5), and the unhealthiest Matale Local Board (37·6 for adults and 26·2 for infants). The birth-rate of each of the subdivisions was an improvement on the average, especially in Matale north (56·4, average 48·3).

65. In the Nuwara Eliya District the mortality rate diminished to 27·0 from its average 27·2. The diminution was confined to Walapane, where the rate fell to 27·0 from the average 31·7. The other three divisions, Nuwara Eliya Local Board, Kotmale, and Uda Hewaheta, showed enhanced rates. The birth-rate of the district (43·0) showed a slight improvement on the average (42·5). Nuwara Eliya Local Board (26·6) and Uda Hewaheta (46·8) shared in the improvement, while Kotmale and Walapane showed slightly diminished birth-rates.

66. *Southern Province.*—The health of the Sinhalese in the Southern Province, who number about 538,000, and form the bulk of the population, was almost normal, the death-rate for the year being 25·5, against an average of 25·3. Of its three districts, Galle showed an increased death-rate, while Matara and Hambantota showed reduced death-rates. The birth-rate of the Province (42·1) was a considerable improvement on the average (35·4).

67. In the Galle District, which contains more than half the population of the Province, the death-rate rose to 28·1 from its average 25·0. All its subdivisions, except Wellaboda pattu and Hinidum pattu, showed enhanced death-rates. In the Wellaboda pattu the average mortality (25·0) remained normal, and in Hinidum pattu, the healthiest division in the district, the death-rate fell to 22·7 from its average 25·5. The unhealthiest divisions were Talpe pattu and Walallawiti korale, which had the same death-rate (28·9) as well as the same birth-rate (43·7). In the Galle Municipality division, which showed the lowest birth-rate (31·1), the death-rate was 28·7, and the average 25·1.

68. In the Matara District, which is the smallest district in the Southern Province, and includes over a third of the Sinhalese population in the Province, the death-rate was in the proportion of 23·2, and was a slight improvement on the average 23·9. The improvement in the birth-rate was more noticeable, 43·5, against an average of 35·4. Four of its subdivisions enjoyed better health than usual, while the other three fared worse. The death-rates for the year in the subdivisions ranged between 28·3 in Matara Local Board and 19·1 in Wellaboda pattu, which is the healthiest division in the district, and in fact in the Province.

69. In the Hambantota District, which is more than twice the size of Matara, but contains a population a little more than half that of Matara, there was a considerable improvement in the health of the Sinhalese. The improvement was to some extent in Magam pattu, exclusive of Four Gravets (42·8 as against 44·1), but more especially in Giruwa pattu west, which is by far the most populous and the second healthiest division in the Province. Hambantota Four Gravets showed the lowest birth-rate in the district (33·1, average 33·2) and a death-rate of 35·8, against an average of 34·0. The infantile mortality was in the proportion of 459 to 1,000 births registered.

70. *North-Western Province.*—The North-Western Province, with a Sinhalese population of about a third of a million, showed a mortality rate of 24·5, a considerable improvement on the average 34·8. The birth-rate (43·0) was in excess of the average (36·5 . All its three districts enjoyed better health than usual, especially the Kurunegala District.

71. There was a marked improvement in the health of Kurunegala District, the death-rate falling to 26·1 from an average of 38·5. The improvement was shared by each of its seven subdivisions, and

was probably due to the adoption of sanitary measures (such as the clearing of a 60 yards belt of jungle round each village, so as to allow of the free circulation of air), referred to in the Administration Report of the Government Agent Mr. H. L. Crawford. It is noticeable that the number of deaths in the district from all causes during the year (6,703) was 2,231 less than the previous year, in spite of an increase in the population. Katugampola hatpattu, which contains the largest population in the district, showed the lowest death-rate (17·5), and Kurunegala Local Board the highest (47·9), but this rate is a decided improvement on the average (72·0). The birth-rate for the year (45·0) was also a great improvement on the average (38·0), and the improvement was spread over all the subdivisions.

72. The Puttalam District, which contains an area of about half the size of Kurunegala District, and a total population of nearly 30,000, of whom 40 per cent. are Sinhalese, 33 per cent. Moors, and 27 per cent. Tamils, showed lower death-rates than usual for Sinhalese and Tamils, and higher death-rates for the Moors. Statistics for the Sinhalese, Tamils, and Moors of this district are separately shown in the Tables VI., VII. (*a*), and VII. (*b*), respectively. The Sinhalese mortality rate fell to 30·2 from an average of 41·7. Demala hatpattu, which contains more than half the Sinhalese population in the district, showed a death-rate of 36·8, as against 52·8, the average. The other two principal Sinhalese divisions, Kalpitiya and Puttalam, also showed diminished death-rates, 17·3 and 16·4, as against their averages 15·3 and 19·5 respectively. The Sinhalese infantile mortality in the Kalpitiya division was as usual excessive. The rate per 1,000 births registered this year, 636, as against 429 in the last year, was the highest in the Island.

73. The death-rate among the Tamils, who number about 8,000, diminished to 35·1 from its average 42·5. Two of the principal Tamil divisions, Puttalam Local Board (34·2) and Kalpitiya (40·3), showed reduced death-rates from the averages 57·7 and 56·8 respectively, and Puttalam division showed an enhanced rate (28·6, as against 27·8). The mortality among the Moors in the district was in the proportion of 37·9 per 1,000, and was a deterioration from the average 36·7. Kalpitiya division, which contains the largest number of Moors—about half the Moorish population in the district—was, as usual, the unhealthiest division, the healthiest Moorish division being Puttalam Local Board 31·9 (average 32·7). Two deaths from smallpox were registered during the year, which the Assistant Government Agent states were the only fatal cases out of an epidemic which broke out in July, the disease being introduced from Colombo by a pilgrim journeying to St. Anna's.

74. The Chilaw District is less than one-third of the size of Puttalam District, but contains more than twice as many inhabitants. The health of the district during the year was very satisfactory. The death-rate among the Sinhalese, 17·6, the second best in the Island, was an improvement on the average 19·9. The birth-rates for the decade, 31·7, rose to 36·7 during the year. Pitigal korale south showed the lowest death-rate in the district (14·0) and Chilaw town the highest (26·7). The most populous division in the district, Pitigal korale central, showed a death-rate of 18·4. In Pitigal korale north, which is the largest division in the district, the death-rate 25·1 was a great improvement on the average 30·3.

75. *North-Central Province.*—The health of the North-Central Province, which is the second largest Province in the Island, but contains the smallest number of inhabitants, was on the whole satisfactory. The death-rate 37·7 was an improvement on the average 40·3. The birth-rate 51·0 was an excess of 9·1 on the average 41·9. All the subdivisions, except Anuradhapura town, showed improved birth-rates as well as death-rates. In the Anuradhapura town the birth-rate 22·4 was a slight improvement on the average 22·2, but the death-rate 47·3 was a deterioration from the average 41·1. This division showed also a very high infantile mortality (593 per 1,000 births registered). The lowest death-rate was in Kelegam palata (35·7).

76. *Province of Uva.*—The inhabitants of the Province of Uva, which is coterminous with Badulla District, fared worse than usual during the year, their death-rate being 44·0, against an average of 39·7. Seven of the eight divisions showed increased death-rates, the exception being Yatikinda (35·0, average 37·1). Buttala division was, as usual, the unhealthiest, with a death-rate of 60·9, a considerable deterioration from the average 51·9. The healthiest division in the district was, as usual, Yatikinda (35·0), followed by Udukinda (37·3). The birth-rate of the district (48·0) showed a slight improvement on the average (47·1). The improvement was shared by three of its subdivisions, Wellawaya, Udukinda, and Wiyaluwa; the other five subdivisions deteriorated in respect of the birth-rates, notably Wellassa (44·3, average 49·9).

77. Twenty-three deaths from cholera were registered during the year. The Government Agent states that there were two distinct outbreaks of the disease, the first at Bintenna about the end of November and the other in some villages north of Welimada about the middle of December. The origin of the epidemics has not been ascertained.

78. *Province of Sabaragamuwa.*—The general health of the Sinhalese inhabitants of the Province of Sabaragamuwa was satisfactory, the death-rate for the year being 27·4, and the average for the ten years 1891 to 1900 being 30·0. Both Ratnapura and Kegalla Districts showed diminished death-rates and enhanced birth-rates. The Ratnapura District, with an area of about two-thirds of the extent of the Province of Sabaragamuwa, and a Sinhalese population of about 114,000, showed a death-rate of 32·5, against an average of 32·9. Compared with the average for the decade 1891 to 1900, four of its subdivisions, viz., Kuruwiti korale, Atakalan korale, Kolonna korale, and Kukulu korale, enjoyed better health; while the other four, Ratnapura Local Board, Nawadun korale, Kadawata korale, and Meda korale, fared worse. The greatest improvement was in Kuruwiti korale (23·1, as against 28·0) and the greatest deterioration was in Kadawata korale (45·4, as against 36·1).

79. In the Kegalla District, which is about half the size of Ratnapura, and contains a larger population, the death-rate was in the proportion of 23·3 per 1,000, and the average 27·5. The birth-rate was also an improvement on the average (42·5, as against 36·1). The death-rates ranged between 18·5 in Dehigampal korale and 35·4 in Kegalla Local Board. All the subdivisions fared better than usual, except Lower Bulatgama, whose death-rate (22·9) was a slight deterioration from the average (22·4).

Health of the Tamils.

80. Of the Tamil population of the Island, which amounts to nearly a million, over one-third is the Indian immigrant population of the estates. The remainder are home-born, of whom about 328,000 live in the Northern Province, about 97,000 in the Eastern Province, about 78,000 in the Western Province, and the rest scattered over the other Provinces of the Island.

Table L below gives the Tamil population, births, and deaths, and their rates for the years 1900 and 1901 and the average for the decade 1891 to 1900 :—

Table L.—The Tamil Population, Births, and Deaths, and their Rates in the Provinces of Ceylon in 1891–1900, 1900, and 1901.

Province.	Population at the middle of the Year 1901.	Births.			Deaths.			Proportion per 1,000 of the Population.					
								Births.			Deaths.		
		Average 1891-1900.	1900.	1901.	Average 1891-1900.	1900.	1901.	Average 1891-1900.	1900.	1901.	Average 1891-1900.	1900.	1901.

Other Provinces, inclusive of Estates ...	454,165	7,639	9,159	8,932	10,766	13,280	16,466	22·4	20·9	19·7	30·2	30·2	36·3
Total ...	957,270	23,232	27,101	28,191	23,214	27,679	31,475	27·2	29·0	29·4	28·1	29·6	322

81. *Northern Province.* — The mortality rate of the Northern Province was in the proportion of 25·6 per 1,000, and was almost the same as the average rate for the decade 1891 to 1900 (25·7). Of its three districts, Jaffna showed a slight improvement in health, and Mannar a great deterioration, while Mullaittivu remained normal.

82. The Jaffna District, which contains the bulk of the Tamil population of the Province—more than 90 per cent.—fared slightly better than usual, the death-rate 23·5 being below the average 24·3. Five of its subdivisions contributed to the improvement, viz., Valikamam north, Valikamam west, Vadamaradchi west, Tenmaradchi, and Delft; the six subdivisions, Jaffna, Valikamam east, Vadamaradchi east, Pachilapalli, Karachchi, and Punakari, fared worse than usual; and the other subdivision, The Islands, showed the same rate (24·7) as the average for the division which originally comprised this and Delft division, and which has now been separately classified.

83. Fifteen deaths have been registered during the year as due to cholera. The disease first broke out, according to the Government Agent, Mr. Ievers, at Achchuveli, a village half-way between Jaffna and Point Pedro, and later on at Kayts, and was fortunately confined to the localities where it appeared, and altogether accounted for 60 deaths. The difference between this number and the number of registered deaths (15) is attributable to the deaths having occurred at the end of the year, and the remaining 45 events have probably been registered in 1902. It has not been ascertained how cholera was introduced into the district in spite of the closing of the northern road to the Indian immigration cooly, and the medical officers have failed to decide how it originated at Achchuveli.

84. Mannar District usually shows a large number of registered deaths over births, but the excess of deaths this year (287) is striking. The death-rate for the year rose as high as 51·0 per 1,000 from an average of 38·7, and the infantile mortality was in the proportion of 405 per 1,000 births registered. All the subdivisions fared worse than usual, notably Nanaddan (59·2, average 34·6). The Assistant Government Agent, Mannar, Mr. B. Constantine, reports that "The district is an unhealthy one, and the abnormal weather conditions of the past year have made it more unhealthy than usual. January and February are unhealthy months, with a heavy fall of dew, making the nights cold and causing chills, and the percentage of sickness drops in the hot months from March onwards. But last year there was hardly any hot season, and instead there was a constant drizzling in March and April, which continued the fever season. Then, when the south-west wind began, there was no rain at all for three months, and practically none for five months, and the hot weather, combined with a constant strong wind, was provocative of pneumonia and fever. The water supply is bad throughout the district, and was made worse by the drought.

"The unhealthiness of the district was reported to Government and a report submitted by the Medical Department, which ascribed the sickness 'to drought and scarcity of good water, and owing to the villagers resorting to native medical treatment, among whom the deaths were due to improper treatment, especially in the cases of chest complaints.'

"The chief cause of the ill-health is malarial fever. Every man expects to have fever, and looks on its coming and going as one of the ordinary incidents of life."

85. The Mullaittivu District enjoyed normal health during the year, the death-rate (41·3) being the same as the average for the decade 1891 to 1900. The death-rates in the subdivisions ranged between 43·6 in Maritime pattus and 39·1 in Vavuniya south. The birth-rate of the district 43·0 was an improvement on the average 34·4.

86. *Eastern Province.*—The mortality among the Tamils of the Eastern Province, who number over 97,000, was 33·6 per 1,000, an increase of 2 per 1,000 on the average 31·6. The birth-rate 42·7 was slightly above the average 42·3. The Moors in the Province, who number about 63,000, showed a death-rate of 30·0, as against their average 27·1. The Sinhalese population in the Province, about 9,000 in number, showed a death-rate of 38·4, being an increase of 6·7 on the average 31·7.

87. The health of the Batticaloa District, which includes a population of over 80,000 Tamils, 54,000 Moors, and about 8,000 Sinhalese, was unsatisfactory, the rate for each race showing an increase on the average. The death-rate among the Sinhalese showed the greatest deterioration (41·5, against an average of 28·9). The majority of the Sinhalese are confined to Bintenna, Akkarai pattu, and Panawa pattu divisions, all of which showed enhanced rates. The mortality among the Tamils (33·2) showed a deterioration from the average (30·3). Batticaloa Local Board (40·1), with a Tamil population of over 8,000, was the unhealthiest division for the Tamils, and Chammanturai pattu (22·7) the healthiest. The health of the Trincomalee District during the year was satisfactory, the death-rate among the Tamils who form the bulk of its population being 35·1, against the average 37·4. Two of its subdivisions, Trincomalee town and Kaddukulam pattu, showed diminished death-rates, while the other two divisions, Koddiyar pattu and Tampalakamam pattu, showed enhanced death-rates. Trincomalee town (37·0) showed the highest death-rate and Kaddukulam pattu (31·3) the lowest. All the subdivisions, except Kaddukulam pattu, showed increased birth-rates.

Health of the Districts in each Quarter.

88. I give below a table showing the death-rate of each district for each quarter in the years 1900 and 1901, and the average for each quarter in the decade 1891 to 1900. The districts are arranged according to the moist and dry zones; that is, the region having 60 inches of rainfall and more, and the region with less than 60 inches:—

Table M.—Mortality of each Quarter in the various Districts of the Island.

Districts.	Average of the Ten previous Quarters, 1891–1900.				1900.				1901.

89. Reference is requested to my quarterly reports published periodically in the *Government Gazette* for more detailed information.

90. In the dry zone districts the first quarter, as a rule, has the highest death-rates. Allowing for delay in the registration of deaths, the unhealthiness thus indicated appears to be due to the extreme variation of temperature in the three months December to February.

91. In the second quarter the death-rates of the dry zone districts generally decline by about 25 per cent. The reason probably is that the south-west monsoon comes as a hot land wind in the Eastern Province, relieved of its moisture by the hills of the Central and Sabaragamuwa Provinces, while in the Hambantota District and from Puttalam northwards the wind comes direct from the sea, and even when bringing no rains has a salutary effect. In the third quarter the death-rates of these districts decline further, but rise in the fourth quarter (the wet period in the dry zone districts).

92. The highest death-rate in the districts in any quarter of the year was 63·7 in Mannar in the first quarter. In none of the other districts was a rate higher than 55 per 1,000 recorded in any quarter, the nearest approach to it being in Mullaittivu in the first quarter. The lowest rate recorded in any quarter was 15·4 in Negombo and 16·5 in Chilaw, both in the third quarter.

VI.—CAUSES OF DEATH.

93. The registered causes of death are given in Table XXIII. in the Appendix, and are summarized in Table N below. Their distribution among the different Provinces and districts is shown in Table XXIV.:—

Table N.—Mortality from various Causes of Deaths in 1901, 1900, and 1891–1900.

Cause of Death.	Total Number of Deaths.			Proportion of Deaths per Million Persons living.		
	1901.	1900.	Average for 1891–1900.	1901.	1900.	Average for 1891–1900.
Zymotic Diseases	45,015	46,152	45,248	12,564	13,109	14,309
Parasitic Diseases	3,485	4,155	3,418	973	1,180	1,049
Dietetic Diseases	279	256	342	78	73	105
Constitutional Diseases	8,063	7,427	7,243	2,251	2,110	2,068
Developmental Diseases	2,831	2,792	2,047	790	793	625
Local Diseases	29,618	31,174	23,575	8,267	8,855	7,009
Violence	1,924	1,805	1,726	537	513	531
Ill-defined and not Specified Causes ...	7,598	7,112	6,065	2,121	2,020	1,858
All Causes ...	98,813	100,873	89,664	27,581	28,653	27,554

94. *Zymotic or Specific Febrile Diseases.*—This class consists of the diseases most amenable to public control, and most capable of being reduced by sanitary measures. The mortality under the head therefore deserves special attention. Zymotic diseases caused 45 per cent. of the registered deaths in 1901, and was 1 per cent. less than in the previous year. The total number of deaths attributed to this class was 45,015, and was in the proportion of 12,564 deaths to a million, as against 13,109 in the previous year and 14,309 the average in the period 1891 to 1900.

95. The fever death-rate decreased to 5,156 from an average of 6,836 in 1891 to 1900 and 6,073 in 1900. The Batticaloa District heads the list with the highest mortality (13,978 per million) from this cause, closely followed by Hambantota (13,647 per million), Mullaittivu (12,988 per million),

Anuradhapura (12,153 per million), Puttalam (10,030 per million), Mannar (8,379 per million), Jaffna (7,505 per million), Matale (7,171 per million), Badulla (6,769 per million), Trincomalee (6,759 per million), Kurunegala (4,901 per million), Negombo (4,606 per million), Ratnapura (4,404 per million), Kalutara (4·166 per million), Colombo (3,680 per million), Chilaw (3,603 per million), Matara (3,233 per million), Galle (3,183 per million), Kegalla (2,743 per million), Kandy (2,673 per million), and Nuwara Eliya 1,202 per million).

96. The mortality from dysentery and diarrhœa was equal to a rate of 6,686 per million of the population, as against the annual average in 1891 to 1900 (6.034).

97. The district with the highest death-rate from dysentery and diarrhœa was, as in the two previous years, Badulla (13,800 per million), followed by Ratnapura (13,219 per million), and then by Kandy (12,048 per million) and Mannar (10,112 per million). The lowest death-rate from this cause, as in the two previous years, was Chilaw (1,071 per million), the next lowest being, as usual, Jaffna and Negombo, with 1,564 and 2,102 per million respectively.

98. *Cholera.*—Fifty-two deaths were registered this year as having resulted from cholera. Of these, 23 occurred in Badulla, 15 in Jaffna, 7 in Anuradhapura, 4 in Negombo, 2 in Kurunegala, and 1 in Kandy.

99. *Parasitic Diseases.*—Parasitic diseases caused 3,485 deaths, and were in the proportion of 973 per million, a rate considerably lower than both the average for 1891 to 1900 (1,049) and the rate for the preceding year (1,180).

100. Under this head was registered dochmius duodenalis or anchylostomiasis as having caused the deaths of 328 persons (against 258 in 1900), of which 95 were in Colombo, 65 in Kandy, 57 in Kegalla, 44 in Ratnapura, 19 in Matara, 12 in Nuwara Eliya, 11 in Galle, 9 in Kalutara, 5 in Matale, 3 each in Jaffna and Badulla, 2 in Trincomalee, and 1 each in Negombo, Kurunegala, and Chilaw.

101. The disease dochmius duodenalis (also known as selerostoma duodenale, or anchylostoma duodenale, or as the tunnel worm, on account of the disasters it caused among the workmen engaged in the Mount St. Gothard Tunnel) did not appear in our returns till 1891, when the death-rate was only 23 per million. The rate has now risen to 92 per million, but there is reason to believe that the mortality from this cause is still under-stated owing to the difficulty of diagnosing the disease.

102. The disease is due to minute worms in the intestines, who bore their way into the mucous membrane. One stage of the worm is passed in muddy or dirty water and gains access to the alimentary canal in drinking water, and there attains its maturity. When present in large numbers these worms produce anæmia, and a large number of deaths in Ceylon now returned as due to diarrhœa, dropsy, debility, anæmia, &c., are really due to dochmius duodenalis.

103. *Dietetic Diseases.*—The deaths from these causes numbered 279 (against 256 last year). Of these, 261 (236 in 1900) were attributed to want of breast milk, 15 to chronic alcoholism, and 3 to delirium tremens.

104. Of the 261 deaths attributed to want of breast milk, 219 were among Tamils (chiefly estate labourers), 27 among Sinhalese, 13 among Moors, 1 Burgher, and 1 Malay. Of the total number, 118 occurred in Kandy, 32 in Badulla, 29 in Kegalla, 28 in Trincomalee, 9 in Matara, 8 in Kalutara, 7 in Negombo, 6 in Colombo, 5 each in Nuwara Eliya and Matara, 3 each in Puttalam and Ratnapura, 2 in Mannar, and 1 each in Jaffna, Hambantota, Kurunegala, and Chilaw.

105. *Constitutional Diseases.*—Constitutional diseases caused 8,063 deaths, and were in the proportion of 2,251 per million, a higher proportion than in the period 1891 to 1900 (2,068). Of the deaths in this class, the most fatal were phthisis 3,390 and anæmia 2,978. Rheumatism caused 546 deaths, scrofula 254, tabes mesenterica 248, cancer 213, diabetes 116, leprosy 104, parangi 89, rickets 52, tubercular meningitis 47, and elephantiasis 1.

106. *Local Diseases.*—The deaths under this head numbered 29,618, and accounted for about 30 per cent. of the total number of deaths. They were in the proportion of 8,267 to a million, as against an average of 7,009. The increase is probably due to better specification of causes of death.

107. Of the total number of deaths from local diseases, 10,960 (or nearly 37 per cent.) were assigned to the diseases of the nervous system, including 9,362 from infantile convulsions, 459 from tetanus, 385 from paralysis, 178 from apoplexy, 94 from epilepsy, and 65 from mania; 6,744 deaths were caused by diseases of the respiratory system, including 2,912 from pneumonia, 697 from bronchitis, 271 from asthma, 34 from pleurisy, 33 from laryngitis, and 5 from croup. Diseases of the digestive system caused 1,261 deaths, including 224 from diseases of the liver, 139 from ascites, 122 from diseases of stomach, 66 from dyspepsia, and 48 from hæmetamesis; 536 deaths resulted from diseases of the circulatory system, including 274 from varicose veins, 18 from angina pectoris, and 14 from valve diseases of the heart; 301 deaths resulted from diseases of the urinary system, including 88 from Bright's disease, 43 from nephritis, 38 from suppression of urine, 8 from diseases of the bladder, and 1 from calculus; and 7,544 (or 26 per cent.) from diseases of the integumentary system.

108. *Diseases of Women at Parturition.*—2,068 deaths were attributed to diseases of parturition, including 1,084 from puerperal convulsions, 42 from abortion and miscarriage, 8 from flooding, 5 from phlegmasia dolens, 2 from puerperal mania, and 927 from other and undefined accidents of childbirth. The total number of children registered during the year as born alive was 134,252, so that the mortality of mothers to a 1,000 children born was 15·4. In other words, one mother died to every 65 children born alive, this proportion being more than three times as high as the average rate in England in 1899.

Table O.—Deaths of Women at Parturition.

Nationality.	Deaths of Women at Parturition.			Births.			Deaths of Women at Parturition to 1,000 Births.		
	Average. 1891–1900.	1900.	1901.	Average. 1891–1900.	1900.	1901.	Average. 1891–1900	1900.	1901.
All Races ...	2,106·9	2,342	2,068	112,204	136,051	134,252	18·8	17·2	15·4

Burghers ...	8·3	7	11	458	675	682	17·5	10·3	16·1
Sinhalese ...	1,638·2	1,884	1,628	79,902	98,952	96,262	20·5	19·0	16·9
Tamils ...	298·0	303	284	23,232	27,101	28,191	12·8	11·1	10·1
Moors ...	152·2	141	138	8,091	8682	8,440	18·8	16 2	16·4
Malays ...	8·0	5	7	247	352	355	32·4	14·2	19·7
Others ...	1·9	2	—	120	131	168	16·7	15·3	—

109. *Accidents.*—The deaths in 1901 ascribed to accident or negligence numbered 1,608, and were equal to a rate of 448 per million, 11 per million less than the mean rate for 1891 to 1900 (459). Of these deaths, 416 or nearly 40 per cent. were due to fall from trees, 367 to drowning, 184 to snake-bite, 48 to other poison, 102 to burns and scalds, 7 to gunshot wounds, 76 to injury at birth, 72 to fall of heavy substance, 36 to fall from heights other than trees, 19 to being run over by trains, 17 to being run over by carts, 17 to lightning, 8 to suffocation, 3 to explosion at quarries, 2 to sunstroke, 1 to tram car, 1 to a steam roller, 1 to a fall from a horse, 1 to machinery, 1 to fall into a pit, 1 to explosion of gunpowder, 1 to a shock, and 1 to an overdose of arrack. Twelve deaths were caused by alligators, 9 by elephants, 7 by buffaloes, 6 by bulls, 5 by wasps, 3 by cheetahs, 3 by boars, 2 by bears, 2 by horses, 2 by rat bites, and 1 by a cow (Table XXVIII.).

110. *Suicide.*—146 deaths were attributed to suicide, equal to a rate of 41 per million persons living, which is considerably lower than in England, where in 1899 it was 90 to a million. The favourite mode of suicide in Ceylon is hanging, which accounts for more than half the deaths (77) and drowning accounts for 24.

111. *Homicide.*—As many as 135 deaths were attributed to homicide, corresponding to a rate of 38 per million persons living, a rate 6 per million higher than the average during the period 1891 to 1900 (32).

112. *Executions.*—There were 35 judicial executions registered during the year. This is 3 in excess of last year, and corresponded to a rate of 10 per million persons living.

VII.—BIRTHS AND DEATHS ON ESTATES.

113. The total number of births reported for registration in 1901 from the estates in the Central, Uva, and Sabaragamuwa Provinces, and the Colombo and Kalutara Districts of the Western Province, was 8,175 (of which 20 were Europeans, 26 Burghers, 240 Sinhalese, 7,804 Tamils, 65 Moors, 13 Malays, and 7 others); and the total number of deaths numbered 13,807 (19 Europeans, 9 Burghers, 182 Sinhalese, 13,505 Tamils, 80 Moors, 2 Malays, and 10 others).

114. The term "estate" means any land having 10 or more acres in cultivation and situated in a district appointed under the Medical Wants Ordinance, No. 17 of 1880. The Ordinance has been brought into operation only in the districts containing tea, coffee, and other plantations, mainly under European management, viz., in the districts named above.

115. The subjoined Table P gives the birth- and death-rate among the estate labourers. The Colombo District means here the estates in the Avisawella division:—

Table P.—Birth- and Death-rates among the Estate Population.

District.	Population at the Census of March 1, 1901.	Proportion per 1,000 of the Population.											
		Births.						Deaths.					
		1896.	1897.	1898.	1899.	1900.	1901.	1896.	1897	1898.	1899.	1900.	1901.

Colombo ...	16,965	10·3	19·3	16·3	15·1	19·7	16·0	47·5	47·9	46·0	50·6	39·9	50·0

116. *Kandy District.*—The estate births reported for registration in 1901 numbered 3,114 (13 Europeans, 9 Burghers, 61 Sinhalese, 3,005 Tamils, against 2,904 the annual average for 1896–1900, 21 Moors, 4 Malays, and 1 other) and the deaths numbered 5,915 (11 Europeans, 3 Burghers, 66 Sinhalese, 5,793 Tamils, against 3,505 Tamils, the annual average for 1896–1900, 35 Moors, 1 Malay, and 6 others). The birth-rate for the year (20·0) was 1·9 per 1,000 below the annual average for 1896–1900 (21·9), while the death-rate (38·1) showed an increase of 12·4 over the average 25·7.

117. Of the 5,915 deaths, 2,734 or 46 per cent. were due to diarrhœal diseases, as against 38 per cent. in the preceding five years 1896–1900. The other most fatal causes were debility 1,010 (600 the annual average in 1896–1900), pneumonia and bronchitis 318 (average 232), general dropsy 283 (average 143), fevers 241 (average 173), malarial cachexia 240 (average 138), infantile convulsions 183 (average 156), old age 155 (average 98), dochmius duodenalis 55 (average 55), anæmia 47, phthisis 46, and starvation (want of breast milk) 40.

118. *Matale District.*—The total number of births reported for registration from the estates in the Matale District numbered 519 (3 Europeans, 1 Burgher, 9 Sinhalese, 503 Tamils against 466 Tamils the annual average for 1896–1900, 2 Moors, and 1 other), and the deaths numbered 1,102 (12 Sinhalese, 1,084 Tamils against 631 Tamils the annual average for 1896–1900, 5 Moors, and 1 Malay). The birth-rate for the year (19·9) was 1 per 1,000 below the average for the period 1896–1900 (20·9), while the death-rate (42·2) was 14·7 per 1,000 in excess of the annual average 27·5.

119. Of the 1,102 deaths in 1901, 449 or 40 per cent. were due to diarrhœal diseases, 8 per cent. higher than the average for 1896–1900. Debility (mostly of infants from inability to suck) caused 112 deaths (68 the annual average for 1896–1900), malarial cachexia 111 (60 the annual average for 1896–1900), pneumonia and bronchitis 99 (50 the annual average for 1896–1900), fevers 88 (83 the annual average), general dropsy 58 (28 the annual average), infantile convulsions 35, anæmia 24, and old age 21.

120. *Nuwara Eliya District.*—The total number of births reported for registration from the estates in the Nuwara Eliya District in 1901 was 1,685 (1 European, 8 Burghers, 41 Sinhalese, 1,625 Tamils against 1,768 Tamils the annual average for 1896–1900, 8 Moors, and 2 Malays, and the deaths numbered 1,650 (2 Europeans, 1 Burgher, 20 Sinhalese, 1,623 Tamils against 1,733 Tamils the annual average, and 4 Moors). Both births and deaths show decreased rates, the former declining to 16·3 from an annual average of 20·1, and the latter 16·0 from 19·4.

121. Of 1,650 deaths in 1901, as many as 843 or more than 50 per cent. are due to diarrhœal diseases. The other most fatal causes were debility 252 (382 the annual average for 1896–1900), pneumonia and bronchitis 128 (174 the annual average for 1896–1900), old age 84 (57 the annual average for 1896–1900), general dropsy 61 (88 the annual average), fevers 52 (64 the annual average for 1896–1900), infantile convulsions 38 (50 the annual average for 1896–1900), phthisis 16, and influenza 16.

122. *Badulla District.*—The total number of births reported for registration from the estates in the Badulla District in 1901 amounted to 1,152 (2 Europeans, 6 Burghers, 20 Sinhalese, 1,114 Tamils against 991 Tamils the annual average for 1896–1900, 6 Moors, 4 Malays), and the deaths numbered 1,412 (2 Europeans, 2 Burghers, 13 Sinhalese, 1,386 Tamils against 1,022 Tamils the annual average for 1896–1900, 8 Moors, and 1 other). The birth-rate (22·2) has remained almost identical with the annual average (22·1), while the death-rate rose to 27·3 from the average of 20·7.

123. Of the 1,412 deaths in 1901, 497 or 35 per cent. were due to diarrhœal diseases. The other most fatal causes were debility, mostly of infants from inability to suck, 254 (172 the annual average for 1896–1900), pneumonia and bronchitis 140 (93 the annual average for 1896–1900), fevers 119 (71 the annual average for 1896–1900), infantile convulsions 55 (41 the annual average for 1896–1900), general dropsy 49 (25 the annual average for 1896–1900), malarial cachexia 40 (23 the annual average for 1896–1900), and old age 32.

124. *Kegalla District.*—The total number of births reported for registration from the estates in the Kegalla District amounted to 919 (1 European, 1 Burgher, 51 Sinhalese, 843 Tamils against 805 Tamils the annual average for 1896–1900, 17 Moors, 3 Malays, and 3 others), and the deaths numbered 1,668 (4 Europeans, 3 Burghers, 36 Sinhalese, 1,598 Tamils against 1,261 Tamils the annual average for 1896–1900, 25 Moors, and 2 others). The birth-rate in the district (24·2) was almost identical with the annual average for 1896–1900 (24·8), and the death-rate (40·2) was 2·8 per 1,000 above its annual average 37·4.

125. Of the 1,668 deaths in 1901, diarrhœal diseases caused 736 or over 44 per cent. of the deaths. The other most fatal cause of death here as elsewhere was debility, which caused 167 deaths (123 the annual average for 1896–1900), 122 deaths were attributed to malarial cachexia (106 the annual average for 1896–1900), fevers 102 (84 the annual average), infantile convulsions 85 (74 the annual average), old age 71 (49 the annual average), pneumonia and bronchitis 52 (55 the annual average), dochmius duodenalis 48 (28 the annual average), and general dropsy 41.

126. *Ratnapura District.*—The total number of births reported for registration from the estates in the Ratnapura District in 1901 was 394 (1 Burgher, 22 Sinhalese, 362 Tamils against 311 Tamils the annual average for 1896–1900, and 9 Moors), and the deaths numbered 758 (16 Sinhalese, 740 Tamils against 452 the annual average for 1896–1900, and 2 Moors). The birth-rate during the year (23·7) was 1·8 per 1,000 less than the average, while the death-rate increased to 45·5 from the average of 36·0.

127. Of the 758 deaths in 1901, as many as 423 or nearly 56 per cent. were due to diarrhœal diseases. The other most fatal causes were debility, mostly of infants from inability to suck, 73 (51 the annual average for 1896–1900), malarial cachexia 47 (17 the annual average for 1896–1900), fevers 46 (47 the annual average for 1896–1900), infantile convulsions 32 (29 the annual average), dochmius duodenalis 22 (14 the annual average), general dropsy 14, pneumonia 12, and old age 11.

128. *Colombo District.*—This is one of the districts which, as a rule, shows very high death-rates and low birth-rates. The number of births reported for registration from the estates in this district was 120 (16 Sinhalese, 102 Tamils, 1 Moor, and 1 other), and the deaths numbered 454 (7 Sinhalese, 446 Tamils, and 1 other). In the year under review the birth-rate has remained almost normal (16·0, against 16·1), while the death-rate rose so high as 50·0 from an average of 46·4.

129. Of the 454 deaths, as many as 257, *i.e.*, nearly 57 per cent. of the total number, were due to diarrhœal diseases. The other chief natural causes of death were fevers 76, pneumonia and bronchitis 18, anæmia 15, debility 11, phthisis 9, malarial cachexia 7.

130. *Kalutara District.*—The number of births reported from the estates in this district was 272 (20 Sinhalese, 250 Tamils, 1 Moor, and 1 other), and the deaths numbered 848 (12 Sinhalese, 835 Tamils, 1 Moor). This, like Colombo, is one of the least healthy districts for the estate Tamil population, and as a rule shows low birth- and high death-rates. The birth-rate during the year (14·4) is a slight improvement on its average (13·3), while the death-rate shows a marked deterioration in health, the rate recorded (54·7) being 18·4 per 1,000 in excess of the annual average 36·3.

131. In the year 1901 the largest number of deaths in the district was from tabes mesenterica. The disease appears to have been mainly confined to the estates of this district, and was responsible for 221 deaths, or more than one-fourth of the total number of deaths (848). The other most fatal causes were diarrhœal diseases 213, debility 67, malarial cachexia 54, fevers 53, general dropsy 40, infantile convulsions 35, old age 26, pneumonia 22, and phthisis 18.

VIII.—HEALTH OF THE TOWN OF COLOMBO.

132. The total number of births registered in the town of Colombo during the year 1901 was 3,234 and corresponded to a rate of 20·6, which was a deterioration from the rate for the previous year (22·4) as well as from the average rate for the period 1895 to 1900 (21·0). The number of deaths registered in the town in 1901 was 5,412. Add to this 32 deaths of town patients who died at the Infectious Diseases Hospital at Kanatta (outside the town), and whose deaths were registered by an extra-urban registrar, and there would be a total of 5,444, equal to a rate of 34·7 per 1,000 persons living. The death-rate was in excess of the average for the period 1895 to 1900 by 2·1, and of the rate for the preceding year by ·5; the number of deaths registered during the year was the largest ever recorded in the town, and was 763 in excess of the annual average for the preceding six years 1895 to 1900 (4,681).

133. The vital statistics of the town were first separately collected in 1887; and at the end of 1892 important changes in the system of death registration were introduced by the Ordinance No. 20 of 1891, which came into operation there on the 1st January, 1893. The machinery of registration was

improved at the beginning of 1895 by the appointment of stipendiary medical officers as registrars, and still further, in May, 1897, by increasing their number and making inspection by the registrar, or a certificate as to the cause of death from a qualified medical attendant on the deceased, indispensable. The period subsquent to 1892 accordingly shows a marked increase in the number of registered events, especially deaths, over the period 1887 to 1892.

134. During the period 1895 to 1901 the average number of deaths registered yearly was 4,870, and in 1887 to 1892 2,628. The population is estimated to have increased to 147,842 at the middle of the former period from 125,871 at the middle of the latter period. Making allowance for this increase, and presuming that the mortality was equal at both the periods, there should have been registered an average of 4,146 deaths in 1887 to 1892 instead of 2,628. This would show that 37 per cent. of the deaths during this period escaped registration.

135. In 1887 to 1892 the mean annual mortality of the town was 20·8 per 1,000. In 1893, upon the introduction of the new system of registration of deaths, the death-rate rose to 31·4. The rate rose still higher (to 33·6) in 1894, and remained about the same in the three succeeding years 1895, 1896, and 1897. In 1898 it fell to 32·1, and still further to 29·8 in 1899, from which it rose to 34·2 in 1900 and to 34·7 in the year under report.

136. As usual, the death-rate exceeds the birth-rate, owing mainly to the preponderance of males over females, chiefly among the Europeans and among the Indian Tamils and Mohammedans, and to the presence of hospitals and jails, which add to the normal mortality of the town. The birth-rate this year fell short of the death-rate by 40 per cent.

137. *Births and Deaths and their Rates.*—The subjoined Table Q gives the births and deaths and their rates of each race living in the Colombo Municipality for the years 1900 and 1901 and the averages for 1895 to 1900 :—

Table Q.—Births, Deaths, and their Rates for each Race living in the Town of Colombo for 1900 and 1901, and the Averages for 1895–1900.

Race.	Population (inclusive of the Military) at the Census of 1901.	Births.			Deaths.			Birth-rate per Mille.			Death-rate per Mille.		
		Average, 1895-1900.	1900.	1901.	Average, 1895-1900.	1900.	1901.	Average, 1895-1900.	1900.	1901.	Average, 1895-1900.	1900.	1901.

Others ...	4,548	41	44	35	105	133	164	11·4	10·0	7·6	28·0	30·3	35·4

138. The increase in the death-rate is shared by all the nationalities, except Burghers and Malays. The Burghers, as usual, showed the lowest death-rate (24·9), an improvement on the average (26·5). The highest death-rate was among the Tamils (39·9), and the next among the Malays (37·1). With the exception of the Moors and "Others" who showed lower birth-rates, all the other nationalities show improved birth-rates.

139. The number of births and deaths of the different races of the different wards of the town and their rates per 1,000, the principal zymotic causes of death, &c., are shown in the following Table R :—

[For Table see page F 16.]

140. Omitting the Fort and Galle Face Ward, of which the population is mainly an adult male and floating one, and the Pettah Ward, where also the conditions are similar, the healthiest division during the year was, as usual, the Kollupitiya Ward, with a death-rate of 18·7, as against an average of 21·3 for the period 1895 to 1900 and 18·4 the rate for the previous year. The highest death-rate was, as usual, in the New Bazaar Ward (30·8, average 30·2). In four of the Wards, viz., Fort and Galle Face, Pettah, St. Sebastian, and New Bazaar, the death-rates were in excess of the average; and in four of the Wards, viz., Kotahena, Maradana, Slave Island, and Kollupitiya, the mortality rates diminished from the average. In St. Paul's Ward the death-rate (28·4) was identical with the average.

141. For full particulars as to the health of the town in the four quarters and for each week of the year 1901, reference is requested to my quarterly reports published periodically in the *Government Gazette* and to the weekly reports published in the local newspapers.

142. *Causes of Death.*—The causes of death in the year (Table XXVII.) are summarized below side by side with those of the year 1900 and the average for 1895 to 1900 :—

Table S.—Mortality in the Town of Colombo from the Several Classes of Diseases in 1900 and 1901, and the Average in 1895–1900.

143. The deaths attributed to zymotic causes in 1901 numbered 1,693, and corresponded to a rate of 10·79 per mille, a slight increase on the rate for the preceding year (10·46) and on the average rate for the period 1895 to 1900 (10·41). Of these 1,693 deaths, fever caused 460, including 95 deaths from enteric fever (against 128 in 1900), diarrhœa and dysentery 1,008 (against 918 in 1900), malarial cachexia 91 (against 99 in 1900).

144. There was not a single death registered in the year from cholera in the town, but smallpox proved fatal in 29 cases.

145. Parasitic diseases caused 167 deaths, a proportion of 1·06 per mille, as against 1·31 last year and an average of 1·27 in 1895 to 1900. Of these deaths, 93 were attributed to dochmius duodenalis (against 105 last year), of which 48 victims were Tamils, 33 Sinhalese, 4 Moors, 1 Malay, and 7 others.

146. Constitutional diseases caused 673 deaths, a proportion of 4·29 per mille, against 3·85 last year and an average of 3·50 for the period 1895 to 1900. Under this head phthisis caused 504 deaths (against 420 in the last year), anæmia 71, cancer 21, diabetes 19, tabes mesenterica 12, and leprosy 8.

147. The deaths from local diseases numbered 2,076, being in the proportion of 13·23 per mille, a higher rate than last year (11·90) and the average (11·44). Of these, diseases of the nervous system caused 756 deaths (including 399 deaths from infantile convulsions) and those of the respiratory system caused 866 deaths, including 577 from pneumonia and 253 from bronchitis.

148. Violence accounted for 95 deaths, of which 68 were caused by accidents; of these, 19 were due to drowning, 7 to burns, 5 to fall of heavy substances on, 4 to falls from heights, 5 to railways, 2 to carts, 2 to poison, 2 to machinery, 2 to being knocked down by horses, 1 to being gored by a bull, 1 to explosion of dynamite, 1 to lightning, and 1 to gun shot. Seventeen deaths resulted from homicide. Ten deaths were due to suicide, 6 of which were by hanging, 2 by gunshot, 1 by cut or stab, and the other by poison.

IX.—HEALTH OF THE PRINCIPAL TOWNS.

149. The death-rate of the towns was 36·3 in 1901, as against 36·1 in the previous year and 34·6 the average for the period 1898 to 1900. The birth-rate was 25·1 in 1901, as against 28·5 in 1900 and 28·7 the average for the period 1898 to 1900.

150. The following Table T shows the births and deaths and their rates in each of the towns in the Island brought under the system of special registration of deaths provided in the Ordinance No. 1 of 1895 (sections 31 to 36) for the years 1900 and 1901 and the average for the years 1898 to 1900. Death-rates for the year 1901 are shown for deaths inclusive as well as exclusive of deaths in hospitals and jails. These rates are for all races, and may differ from the rates given in Tables VI. and VII. (*a*) and (*b*), which are for the indigenous races:—

Table T.—Births and Deaths and their Rates for the Towns.

Towns.	Population (inclusive of the Military) at the Census of 1901.	1901.			Birth-rate.			Death-rate.

Kegalla ...	2,340	79	130	102	45·7	39·1	31·6	84·2	83·0	52·0	11·2

151. Of the twenty-six towns (exclusive of Colombo) included in this table, as many as seventeen have a population of less than 10,000 and eleven of them less than 5,000, but they are all district headquarters, except Gampola and Nawalapitiya, which are centres of tea districts and important railway stations, and also Moratuwa and Panadure, centres of several populous villages. In the majority of these towns more than half the number of deaths, and in others nearly half, appear to have occurred in hospitals, which are chiefly resorted to by estate coolies or the destitute poor not resident in the towns. Excluding the hospital and jail deaths, the lowest death-rate was in Kegalla (11·2), followed by Tangalla (12·2) and Nawalapitiya (13·8); and the highest death-rate was in Mullaittivu (47·9), followed by Batticaloa (38·8) and Anuradhapura (36·0).

X.—ADMINISTRATION.

152. Mr. Haughton, who relieved me on August 1, 1900, to enable me to devote undivided attention to Census work, administered the Department till April 17, 1901, when I resumed charge of the Department, and have continued to administer it in addition to the Census Department. I have had in consequence of the dual duties to work at very high pressure, and have been prevented by Census work from doing much in the way of inspection of the branch offices of this Department and of the registrars of births, marriages, and deaths.

153. The work of this Department, which had greatly increased since the enactment of the consolidated Ordinances Nos. 1 and 2 of 1895, received a further impetus from the amending Ordinances Nos. 23 and 19 of 1900, which came into operation on January 1, 1901. Errors both clerical and due to an imperfect knowledge of the Registration Ordinances became so frequent in the work of the registrars of births, marriages, and deaths that the examination of the registers fell into heavy arrears, and the examining staff had to be strengthened by four clerks from the middle of 1901. The result has been satisfactory. Not only has a large number of mistakes been discovered and remedied, which marred the value of the registers, and in some cases would have rendered them invalid and inadmissible in law, but the standard of the work of the registrars has been considerably raised and improved, and the risk of future irregularities reduced.

154. During the year under review there were four Proclamations issued by the Governor, on July 18 and December 19, altering and amending the boundaries of registration divisions in the Western, Central, Southern, Eastern, North-Western, North-Central, Uva, and Sabaragamuwa Provinces under Ordinances Nos. 1 and 2 of 1895, and another Proclamation dealing with the Kandyan marriage registration divisions under Ordinance No. 3 of 1870, and making them as far as possible identical with the general marriage registration divisions. There was also a Proclamation published on July 18 introducing the Mohammedan Marriage Registration Ordinances into the Northern Province.

155. Table XXIX. in Appendix shows the revenue derived from stamps affixed to declarations, affidavits, copies and extracts of registers, applications, &c., under the Ordinances Nos. 1 and 2 of 1895 during the year 1901 and the period 1897 to 1900. The amount derived during the year 1901 was Rs. 10,048, and the yearly average during the years 1897 to 1900 was Rs. 8,080·18.

156. The duplicate registers of marriages, births, and deaths received from July, 1897, up to March 31, 1902, which had remained unbound, have now been bound into volumes of convenient size and arranged, and lists of them made to facilitate access to the registers. The number of volumes bound amounted to 1,944 and their cost Rs. 2,234·35, which was, as usual, met out of the record room fees. The storage and arrangement of these records have been seriously impeded by the want of accommodation in my Head Office record room. I am at a loss to know how more space can be found for the ever-increasing mass of records, unless the new building, which has been long promised, is provided early.

Registrar-General's Office,
Colombo, August 30, 1902.

P. ARUNACHALAM,
Registrar-General.

APPENDIX.

I.—Estimated Population and Number of Marriages, Births, and Deaths registered in the Island in each of the Years 1867–1901.

Year.	Estimated Population in the Middle of the Year.	Marriages registered.	Persons married.	Births registered.	Deaths registered.§	Excess of registered Births over Deaths.*	Excess of Immigrants over Emigrants.

* The sign minus (—) signifies that deaths exceeded births.

† The births and deaths here shown for 1867 were registered in the ten months commencing March 1, on which date the Ordinance No. 13 of 1862 came into operation.

‡ The number of births and deaths for 1868 includes those registered in the first half-year under the Ordinance No. 13 of 1862, and those in the second half under Ordinance No. 18 of 1867, which repealed the former Ordinance and came into operation on July 1, 1868.

§ The registration of deaths up to 1887 was imperfect, and the figures given cannot safely be compared with those of subsequent years, in which deaths have been registered with increasing efficiency every year.

III.—Estimated Population, and Number of Marriages, Births, and Deaths registered in the Island, with their Rates per 1,000 Persons Living, according to Races, in the Years 1900 and 1901, and the Yearly Average in 1891–1900.

XXIII.—Causes of Deaths, 1900 and 1901, &c.—*continued.*

	Number of Deaths.		
	Average for 1891-1900.	1900.	1901.
Sore throat	38	32	24
Dyspepsia	54	55	66
Hæmatemesis	48	49	48
Melæna	1	1	—
Diseases of stomach	145	121	122
Enteritis	26	52	36
Ulceration of intestines	7	15	8
Ileus, obstruction of intestines	39	52	69
Debility of intestines	11	—	1
Stricture or strangulation of intestine	5	2	7
Intussusception of intestine	2	—	2
Hernia	50	17	23
Fistula	10	13	12
Peritonitis	50	73	103
Ascites	72	103	139
Gallstones	4	—	—
Cirrhosis of liver	34	60	50
Other diseases of liver	202	192	224
Other and undefined Diseases of Digestive System	223	312	299
Diseases of Lymphatic System and Ductless Glands.			
Diseases of the lymphatic system	3	3	5
Diseases of spleen	26	37	42
Diseases of Urinary System.			
Nephritis	16	32	43
Bright's disease	43	85	88
Uræmia	2	1	7
Suppression of urine	27	27	38
Calculus (stone)	2	2	1
Hæmatura	1	1	—
Diseases of bladder	9	9	8
Other & undefined Diseases of Urinary System	45	137	116
Diseases of Organs of Generation.			
Ovarian diseases	6	11	—
Diseases of uterus and vagina	29	26	16
Disorders of menstruation	20	26	29
Pelvic abscess	20	2	—
Perineal abscess	2	—	—
Diseases of testes, penis, scrotum, &c.	30	68	76
Diseases of Parturition.			
Abortion, miscarriage	31	32	42
Puerperal mania	1	—	2
Puerperal convulsions	1,304	1,172	1,084
Placenta prævia, flooding	9	9	8
Phlegmasia dolens	2	2	5
Other and undefined accidents of Childbirth	760	1,127	927
Diseases of Organs of Locomotion.			
Caries, necrosis	3	2	—
Arthritis, ostitis, periostitis	7	9	5
Other and undefined Diseases of Organs of Locomotion	2	1	3
Diseases of Integumentary System.			
Carbuncle	35	43	34
Phlegmon, cellulitis	11	15	20
Ulcer, bed sore	270	108	50
Eczema	17	—	5
Pemphigus	1	—	5
Other and undefined Diseases of Integumentary System	6,074	7,965	7,430
Accident or Negligence.			
Fractures, contusions	597	585	656
Gunshot wounds	60	65	79
Cut, stab	7	9	7
Burn, scald	100	112	102
Poison	37	38	48
Drowning	311	351	367
Suffocation	6	5	8
Snake-bite	187	189	184
Otherwise	186	166	157
Homicide.			
Murder, manslaughter	104	123	135
Suicide.			
Gunshot wounds	6	4	15
Cut, stab	4	7	8
Poison	12	12	8
Drowning	14	22	24
Hanging	66	69	77
Otherwise	9	16	14
Execution.			
Hanging	20	32	35
Ill-defined and not specified Causes.			
General dropsy	2,548	2,587	2,639
Debility	2,977	4,268	4,668
Sudden deaths (causes unascertained)	18	27	26
Abscess	18	30	40
Tumour	2	5	13
Hæmorrhage	7	19	23
Other ill-defined and not specified causes	495	176	189

XXIV.—Causes of Deaths registered in the Island and in each Province and District during the Year 1901.

Causes of Death.	Ceylon.	Western Province.			Central Province.			Northern Province.			Southern Province.			Eastern Province.		North-Western Province.			N.Central Province.	Province of Uva.	Province of Sabaragamuwa.		Deaths among all Races.

2. It will be seen from this statement that 103 forests, of the total extent of 713,413 acres, have now been proclaimed reserves.

3. The Southern Province has the largest number of reserved forests, viz., 42, of the total extent of 130,311 acres. Of these, 17 forests were proclaimed so far back as 11th October, 1865. The Province of Sabaragamuwa has the next largest number, viz., 37, of the total extent of 38,168 acres; but of these so-called "reserved forests," 14 are less than 100 acres in extent, one containing 4 and another 7 acres. One forest is described as "Ratnapura Town," and is stated to be 108 acres in extent. The Eastern Province contains the greatest extent of reserves, viz., 409,181 acres, consisting of three large tracts in the Trincomalee District. The North-Western has ten good reserved forests, one, the Pallakelle forest, being 35,725 acres in extent. The reserved forests in the Northern Province are also of considerable extent, three of them containing 68,507 acres. The Western Province has four forests totalling 4,876 acres, the Central two in the Nuwara Eliya District, the North-Central one, and the Province of Uva the small Haputale forest.

4. The Issembessawa forest in the North-Central Province, 1,092 acres in extent, was the only reserve gazetted during the year.

5. Proposals to reserve the following forests were made during the year and Settlement Officers appointed:—

Province.	Name.	Extent. Acres.	Forest Settlement Officer.
Northern ...	Vettakachchi ...	17,568 ...	R. W. Ievers
Do. ...	Kilinochi ...	33,216 ...	do.
Do. ...	Chunovil ...	5,976 ...	do.
Do. ...	Maha Irambaikulam ...	2,105 ...	do.
Do. ...	Tonigala ...	2,035 ...	do
Do. ...	Mamadu ...	640 ...	do.
North-Western ...	Kankaniyamulla ...	3,130 ...	W. A. G. Hood
Central ...	Campbell's Land ...	723 ...	E. B. Alexander
Do. ...	Ratmirishena ...	90 ...	do.
Sabaragamuwa ...	Hean's Land ...	265 ...	E. M. Byrde
Do. ...	Ulandanuwara ...	— ...	do.

6. Three village forests, 82 acres, 13 acres, and 7 acres in extent, were proclaimed in the Chilaw District.

7. *Southern Province.* — The large surveys undertaken and carried out by the Licensed Surveyor Mr. de Vos have not met with the approval of the Surveyor-General, and the proclaiming of nearly 17,000 acres of land is blocked through the Surveyor-General not issuing certificates of surveys. An extent of 814 acres 2 roods and 8 perches was declared Crown land under the Waste Lands Ordinance. The claim against the Crown for the large tract called Polatukanda, after a prolonged trial, was given in favour of the Crown, and an appeal was lodged. The claim for the Badungoda forest lands was also given in favour of the Crown, but the case is now in appeal.

8. *Western Province.*—No additions were made or proposed to the reserved forests of this Province during the year. The areas cut out by straightening the boundaries of the Barawa and Kananpella reserves have been very nearly worked out, and it is intended to dispose of them as soon as they have been quite cleared.

9. *Northern Province.*—The following forests have been demarcated and are ready for reservation, but no Settlement Officers have yet been appointed:—

	Acres.
Mahamayilankulam	2,610
Irasentirankulam	3,560
Kulamunippu	7,450
Chamalankulam	5,930
Total ...	19,550

The Pallai forest was surveyed by the Survey Department, and will be ready for reservation in 1902. During the year 91,148 acres, or 142·41 square miles, were "released."

10. *Eastern Province: Batticaloa District.*—No reserved forests have yet been proclaimed in this district; but 43 square miles of the great Koralai forest were demarcated, chain-surveyed, and mapped during the year. This forest will probably be ready for reservation in 1904, and will be about 175 square miles in extent.

Trincomalee District.—Private lands to the extent of 5,473 acres were excised during the year from the Padawiya forest.

11. *North-Central Province.*—Proposals were made during the year for the reservation of the following forests, but no Settlement Officers were gazetted:—Anayolandawa, 72,486 acres; Hurulu, 69,497 acres; Padawiya, 178,869 acres; total, 320,852 acres, or 501·33 square miles. The demarcation of the Tamankaduwa forests, 330,415 acres in extent, is practically complete, also the Alistana forest, 2,000 acres. During the year 6,280 acres, or 9·81 square miles, were "released."

12. *Province of Sabaragamuwa.*—No addition was made or proposed to the reserves in this Province during the year. Progress was made with the settlement by exchange of claims to chenas in the Walankanda reserve, but the work will not be completed till 1902.

13. *Boundaries.*—Form No. 9 annexed to this report shows at a glance the demarcation work done by the Department during the year.

14. The sum of Rs. 25,961·91 was spent in opening, widening, and re-clearing 69,496 chains of lines.

15. The average cost of opening 6-feet lines was Rs. 21·13 per mile, of opening 10-feet lines Rs. 55·43 per mile, of widening 6-feet lines to 10 feet Rs. 33·04 per mile, of re-clearing 6-feet lines Rs. 6·53 per mile, and of re-clearing 10-feet lines Rs. 32·77 per mile. The sum of Rs. 2,342·64 was spent in putting up cairns and pillars and other expenses.

16. Demarcation work was carried out in the Hill Reserves on the Kotagala, Kandapola, One Tree Hill, Ohiya, Gallenbedda, and Haputale forests: 112 chains of 6-feet and 2,789 chains of 10-feet lines were opened.

17. In the Eastern Province demarcation work was done in only the large Koralai forest, in which 31,931 chains of 6-feet lines were opened at a cost of Rs. 2,757·65, or an average of Rs. 6·91 per mile, and 1,601 chains of 6-feet lines widened to 10 feet at a cost of Rs. 155·68, or Rs. 7·78 per mile.

18. In the North-Western Circle work was carried on in five forests in the Kurunegala range, in five forests in the Puttalam range, and in three forests in the Chilaw range. In all 7,974 chains of 6-feet lines and 2,103 chains of 10-feet lines were opened, 491 chains of line widened from 6 to 10 feet, and 1,133 chains of 10-feet line were re-cleared at a total cost of Rs. 4,775·13.

19. The work done in the North-Eastern Circle was limited to the excision of private claims in seven forests, which necessitated the opening of 1,380 chains of 6 feet wide at a cost of Rs. 241·50, or an average of Rs. 14 per mile, and the widening of 472 chains of 6-feet lines to 10 feet at a cost of Rs. 165·72, or Rs. 28·08 per mile.

20. In the Northern Circle work was done in eighteen forests, mostly in opening boundaries of proposed reserves, but also demarcating compartments for enumeration surveys. In all 4,324 chains of 6-feet lines were opened for Rs. 1,387·58 or Rs. 25·67 per mile, 2,941 chains of 10-feet line for Rs. 1,939·95 or Rs. 52·77 per mile, 2,145 chains of lines were widened from 6 to 10 feet for Rs. 1,527·77 or Rs. 56·98 per mile, and 360 chains of 6-feet line were re-cleared for Rs. 29·40 or Rs. 6·53 per mile.

21. The work done in the South-Eastern Circle was the opening of 375 chains of 6-feet lines in the Buttala forest for Rs. 289·25 and of 300 chains in the Yala game sanctuary for Rs. 307·93. The work in this Circle was very expensive owing to difficulties about labour and water.

22. In the Province of Sabaragamuwa Rs. 1,710·25 was spent in opening 2,280 chains of 10-feet lines in the Kelani Valley reserve at Rs. 60 per mile. The sum of Rs. 702 was paid for the erection of 234 pillars.

23. A considerable sum was spent, viz., Rs. 5,908·38, in demarcation in the Southern Province. The work consisted in cutting trenches 18 feet by 18 feet, of which 5,823 were cut at an average cost of Rs. 77·62 per mile. In addition 31 pillars were put up for Rs. 9·50, and Rs. 248·88 spent in other expenses.

24. In the Central Province 960 chains of 6-feet lines were opened at a cost of Rs. 325·85, or Rs. 27·15 per mile.

25. No demarcation work was done in the Western and North-Central Provinces or the Province of Uva.

CHAPTER II.

SURVEYS AND WORKING PLANS.

26. *Surveys.*—Mr. H. A. B. Fyers, Forest Department Surveyor, was engaged in the earlier part of the year in surveying proposed reserves in the Puttalam District. The total number of chains surveyed by him there was 8,305, and he took 1,752 angles.

On the 8th July he was sent to Galboda to survey the 768 acres 3 roods 29 perches recently purchased there for the extension of the Railway Fuel Plantation. One object of the survey was to ascertain the amount of forest on the land, which proved to be 192 acres. The work was completed at the end of November, Mr. Fyers having surveyed 2,594 chains and taken 1,079 angles. He resigned his post on the 30th November, having obtained a post in Borneo. The total cost of his work was Rs. 2,617·99, of which Rs. 990 was his salary, &c., Rs. 1,426·20 pay of coolies, Rs. 186·73 for transport, and Rs. 15·06 for stores.

27. A chain survey of 70 one-square-mile compartments of the Koralai forest was made by Mr. C. Kasinader, Forest Overseer, at a cost of Rs. 160·94, or 89½ cents per mile. Plans have been made on a scale of 16 chains to the inch, showing in colours the area of the high forest and scrub, and the numerous rock hills, old bunds, streams, and cart tracks.

28. Copies of one-mile-to-the-inch sheets, showing topographical work done, were obtained from the Survey Department and sent to different Assistant Conservators, who found them most useful in their forest work.

29. *Enumeration Surveys.*—More of this important work was done during the year than in any previous year.

30. In the Hill Reserves enumerations were made in three blocks of the Kandapola reserve, 312 acres in extent in all, when 95,488 sapu, kina, damba, and other trees of all five classes were counted. The cost of the work was Rs. 838·45, or Rs. 2 69 per acre.

31. The most and best work of this description was done in the Koralai forest in the Eastern Circle, where 73,929 ebony, satinwood, palai, ranai, and other trees of all five classes were counted and the saleable trees measured and stamped. The cost was Rs. 2,064·73, or 7 cents per acre, the total extent gone over being 27,520 acres. The work was done by seven trained enumerators, each being assisted by three coolies.

32. In the North-Western Circle enumeration surveys were carried out in twelve forests of the total extent of 6,581 acres. A very large number of ebony, satinwood, and other trees were counted. The cost varied from 6 cents to Re. 1·16 per acre in the different forests.

33. Good work was done in the Kanthalai forest in the North-Eastern Circle, in which a large number of trees, many of the most valuable kinds, such as ebony, satinwood, milla, palai, &c., were counted. Eight compartments of the forests, of the total extent of 5,415 acres, were gone over. The total cost was Rs. 520·73, averaging 9 cents per acre.

34. In the Northern Circle enumeration surveys were carried out in five forests over an extent of 3,034 acres. The total number of trees counted was 40,363 of all five classes, all of the more valuable descriptions. The cost of the work was Rs. 415·59, and varied from 4 cents to Re. 1·75 per acre according to the forest.

35. The work done in the South-Eastern Circle was satisfactory. A total number of 43,666 trees of saleable kinds of all five classes were counted in three compartments, of the total extent of 1,612 acres, in the Lunugamwihara forest, at a cost of Rs. 206 75, or about 13 cents per acre.

36. No enumeration surveys were made in the Western Province, but 1,345 first class hora trees were stamped for felling in the Mitrigalla forest at a cost of Rs. 354·22, or about 26 cents per tree.

37. In the Province of Sabaragamuwa an enumeration survey of the dun trees, over 300 acres, in the Sahawatahinna forest was made, when 1,000 trees of all five classes were counted at a cost of Rs. 15·05, or 5 cents per acre.

38. *Sample Plots.*—More progress was made during the year with the most important work of establishing sample plots for the collection of data regarding the rate of growth of our forest trees, &c. There are now altogether 38 sample plots in the different Circles throughout the Island.

39. In the Hill Reserves there are two, one in the Gaurawila forest and the other at Mapakanda. The latter is however very small, and hardly worth considering a sample plot.

40. There are four plots in the great Koralai forest in the Eastern Circle some considerable distance apart. They are situated in high forest, and are each about 5 acres in extent and demarcated by 6-feet lines. The trees are 360 in number, and are of the more valuable species. Three of them were opened in 1899 and one in 1900. There are also sample plots at Tumpalancholai and Maha-oya, but these are not demarcated, and a teak sample plot at the former place, in which 164 of all classes except the first have been marked.

41. Eighteen sample plots, varying in size from 15 acres to half an acre, have been started in the North-Western Circle. The earliest of these was opened in 1889 and three were opened in 1900. In four of them improvement fellings, clearing of undergrowth, &c., have been made. The trees marked are teak, mahogany, and the principal valuable indigenous kinds. The sum of Rs. 121·95 was spent in connection with these sample plots during the year.

42. In the North-Eastern Circle there are three plots, one of which was opened during the year. They are situated in the Anaolandan forest, vary from 1 to 2 acres in extent, and are demarcated with 6-feet lines. Thinnings and clearing of undergrowth have been carried out in each of them. The principal tree marked is ebony, but there are also a number of satinwood, palai, and ranai. Only Rs. 3 was spent during the year.

43. The Northern Circle has seven sample plots in the following forests:—Iranaimadu, Mandaklaar, Maha Irambaikulam, Tunukadu, Kulamurippu, Namamadu, and Issembessawa, in which ebony, satinwood, halmilla, and other less valuable trees have been marked.

44. There are two sample plots in the South-Eastern Circle, one at Magam-oya, 14 acres 2 roods 3 perches in extent, containing 172 marked trees, chiefly halmilla, and the other in the Lunugamwihara forest, 5 acres in extent, containing 142 stamped trees, chiefly satinwood and halmilla.

45. The Western Province has two plots, both at Botale, one 8 acres 3 roods 35 perches in extent and the other 5 acres. Only hora trees of all five classes are marked in each, 213 trees in one and 225 in the other. One was opened in 1897 and the other in 1900.

CHAPTER III.

PROTECTION AND IMPROVEMENT.

46. *Superior Staff.*—The appointments held by the different officers of the Department are specified below :—

Conservator of Forests		...	Mr. A. F. Broun to the 31st January, when he went on leave and afterwards (on the 11th December) left the service of the Ceylon Government. Mr. Alfred Clark from the 31st January to end of the year.
Assistant Conservator of Forests, Hill Reserves			Mr. H. R. Spence throughout the year.
Do.	Eastern Circle	...	Mr. Alfred Clark to 31st January. Mr. E. L. Boyd Moss from 31st January to end of the year.
Do.	North-Western Circle	...	Mr. H. F. C. Fyers throughout the year.
Do.	North-Eastern Circle	...	Mr. A. M. Walker throughout the year.
Do.	Northern Circle	...	Mr. H. P. C. Armitage throughout the year.
Do.	South-Eastern Circle	...	Mr. F. Lewis to 31st January. Mr. E. L. Boyd Moss from 31st January to 31st July, when he gave over charge to the Assistant Government Agent, Hambantota.
Do.	Western and Province of Sabaragamuwa	...	Mr. F. Lewis throughout the year.

47. Mr. H. R. Spence was absent on vacation leave fourteen days only during the year. Mr. E. L. Boyd Moss returned from half-pay leave and assumed duties on the 31st January. Mr. H. P. C. Armitage was ordered before a Medical Board, and was absent from his Circle ten weeks, during which he carried on his office work through the post. Mr. Lewis was only absent on vacation seven days during the year. The other superior officers took no leave at all.

48. The following Assistant Conservators received during the year the increases of salary specified below from the dates mentioned :—

	From	To	From
Mr. Alfred Clark ...	Rs. 6,000 ...	Rs. 6,250 ...	March 1.
„ H. F. C. Fyers ...	„ 5,000 ...	„ 5,250 ...	do.
„ H. R. Spence ...	„ 4,625 ...	„ 4,750 ...	September 1.
„ E. L. Boyd Moss ...	„ 4,500 ...	„ 4,625 ...	March 1.
„ F. Lewis ...	„ 4,250 ...	„ 4,375 ...	September 1.
„ H. P. C. Armitage ...	„ 4,000 ...	„ 4,125 ...	March 1.

49. *Executive Staff.*—Mr. J. W. Modder, though attached to this Department as a Forest Ranger, is still serving the Government of Siam, to whom his services were lent in April, 1898. He telegraphed more than once during the year asking whether his resignation would be accepted, but on being informed that it would, did not avail himself of the permission. The period for which he is considered to be on leave without pay does not expire till April 21, 1903, and meanwhile the Foresters and other officers junior to him cannot get promotion.

Mr. C. B. Outschoorn, Mr. S. O. Felsinger, and Mr. E. Dissanayaka, Forest Rangers, were given the titles of "Foresters" from the 1st January.

Mr. C. A. Barthelot, Forest Ranger, was transferred from the Eastern Circle to the South-Eastern Circle to work under the orders of the Assistant Government Agent, Hambantota; Mr. D. E. Tiathonis succeeded him in the Eastern Circle.

Mr. G. Rajapakse, Forest Ranger, Hanwella, died in November, and his work was carried on temporarily to the end of the year by Mr. H. W. Wickremasekera.

Mr. C. D. M. Wickrematunga was transferred in September from the Chilaw range to the charge of the Railway Fuel Plantations, Galboda.

50. *Clerical Staff.*—In June Mr. Vannitamby, Fourth Clerk, Head Office, was sent to the Police Court, Hatton, and Mr. E. C. S. Wijesekera appointed in his place.

Mr. R. L. Paranatella, Forest Clerk, Kandy Kachcheri, having died in September, Mr. N. A. Tisseverasinghe, Depôt-keeper, Matalé, was appointed to the post. The vacancy caused by the transfer of Mr. Tisseverasinghe was not filled, as the Matale depôt was closed, but the available salary was utilized on giving an extra clerk to the Assistant Conservator, Hill Reserves, in Mr. J. C. de Goonesekera.

Mr. Sirimane, Forest Clerk, Galle Kachcheri, having been given promotion outside the Department, Mr. J. T. de Silva was appointed to the post in August.

As the Eastern and South-Eastern Circles were being worked together, Mr. B. S. Jumar, Clerk at Hambantota, was temporarily attached to the Hill Reserves Office. When this arrangement was discontinued and the South-Eastern Circle was given in charge of the Assistant Government Agent, Hambantota, Mr. A. B. C. Abeyratne was transferred to that Circle from Kurunegala.

Mr. J. F. Toussaint, Head Clerk, North-Western Circle, having been reduced to the position of Second Clerk his place was filled by the appointment of Mr. B. S. Jumar in October.

Mr. J. Wittachy, Second Clerk, Hill Reserves, resigned his appointment, and was succeeded in July by Mr. W. H. L. Amerasekera.

Mr. S. Anthonipillai, Mr. E. M. Wimalaratna, Mr. A. B. C. Abeyratna, and Mr. B. Thomas received increases of pay during the year.

51. Of the sixty-six officers of all grades of which the Forest Department consists, one Assistant Conservator, seventeen Forest Rangers, and six Clerks are under the orders of the different Government Agents, and are not subordinate to the Conservator of Forests.

52. The staff of temporarily employed officers paid out of votes is very large. The total sum paid to them as salaries during the year amounted to Rs. 17,990·24. The greater number was appointed by the Assistant Conservators and Government Agents without any sanction from Government. Many of them have been regularly employed for years.

53. In the Hill Reserves there are three forest overseers paid Re. 1·50 per day and one paid Rs. 30 per month, one depôt-keeper at Rs. 30 per month, ten forest watchers and three bungalow watchers at 50 cents per day, and one checking station keeper at Rs. 15 per month. The total sum paid as salaries to these men amounted to Rs. 3,997.

54. The Eastern Circle has one forest overseer at Rs. 30 per month, one at Re. 1 per day, and one at 75 cents per day, one sub-overseer at 75 cents per day, eight enumerators at 75 cents per day, two bungalow watchers at 30 cents per day, and five depôt watchers at 30 and 34 cents per day. The total paid to them amounted to Rs. 2,405·34.

55. In the North-Western Circle the following were employed during the year :—Nine felling and firewood overseers at from Rs. 20 to 30 per month, one kanakapulle at Rs. 25 per month, demarcation, and one kanguni at 50 cents per day, three plantation watchers at from Rs. 7·50 to Rs. 15 per month, four depôt watchers at Rs. 12·50 per month, and four bungalow watchers at from Rs. 10 to Rs. 12·50 per month. The total paid to these men during the year was Rs. 4,712·50

56. The North-Eastern Circle has a forest overseer at Re. 1 per day, a bungalow watcher at Rs. 10 per month, and a head cooly at 75 cents per day. Total salaries Rs. 360.

57. In the Northern Circle four forest overseers were employed at Re. 1 per day and two bungalow watchers at Rs. 10 per month. The total paid to them was Rs. 817.

58. The South-Eastern Circle employed two forest overseers at Re. 1·25 per day, three enumerators at 75 cents per day, and three head coolies at 62 cents per day. Total paid Rs. 621·28.

59. In the Western Province one forest overseer at Rs. 30 per month, one fuel overseer at 50 cents per day; one bungalow watcher at Rs. 3 per month, one plantation watcher at Rs. 5 per month, and a tappal cooly at Rs. 10 per month were employed during last year, and paid in all Rs. 666·77.

60. Only two river watchers were employed in the Province of Sabaragamuwa at Rs. 12·50 and Rs. 15 per month. Total Rs. 330.

61. In the Southern Province six forest overseers were employed at Re. 1 per day and five at rates varying from 50 to 75 cents per day, also three forest watchers at 50 cents per day and three Forest Rangers' coolies. The total sum paid on salaries amounted to Rs. 2,605·35.

62. The Government Agent, Central Province, employed three forest overseers at Rs. 20 per month, one depôt-keeper at Rs. 30 per month, also two forest watchers at Rs. 15 per month, and paid them in all Rs. 1,575.

63. Some of these officers in the different Circles and Provinces were only employed for portions of the year.

64. *Chena Cultivation: Eastern Circle.*—During the year licenses were issued to 388 Sinhalese and Veddahs residing in 41 villages to chena 388 acres of land, which is only 15 acres in excess of what was granted last year, though licenses were then issued to 387 men. The sum of Rs. 1,565 was collected as rent by the headmen and paid into the Kachcheri. The Assistant Conservator reported a number of cases where license-holders had exceeded the limits granted to them.

65. *North-Eastern Circle.*—Very few cases of illicit chena cultivation were reported.

66. *Northern Circle.*—The Assistant Conservator reports that there were no cases of illicit chena cultivation, but that some people who had been permitted to clear and cultivate the bed of a tank were fined for destroying valuable trees by careless firing.

67. *Western Province.*—The Assistant Conservator reports:—"No chenas are allowed in the Western Province, and cases of illicit clearing, when detected, are reported to the Government Agent, who takes action through his headmen."

68. *Province of Sabaragamuwa.*—The Assistant Conservator advocates the formation of a register of chena lands, but as this will require a complete cadastral survey of the Province, it is to be feared that it is not likely to be feasible for many years.

69. *Southern Province.*—The state of things as regards chena cultivation in this Province, as compared with the rest of the Island, is very remarkable. In the Tangalla district alone 2,609 cases were instituted, of which 1,428 were pending at the end of the year. This disparity might result from the people of Tangalla being confirmed law-breakers, or from the headmen there being exceptionally vigilant, or from the headmen in other parts of the Island neglecting their duty. The last is probably the true explanation.

70. *Central Province.*—Licenses to the number of 737 were issued to cultivate 615½ acres in the Nuwara Eliya District and 90 to cultivate 403 acres in the Matale District during the year.

71. *Forest Fires.*—The Assistant Conservator, Eastern Circle, reports that the almost annually recurring fires in the grass plains at Tumpalancholai again did damage to the teak plantations near the resthouse. Fire lines were cleared and two watchers put on during the dry months, but for which precautions much greater damage would probably have resulted.

72. The Assistant Conservator, North-Eastern Circle, reports that the watcher put on to prevent fires in the grass plains adjoining the Tamblegam and Galoya forests was not able to stop them or arrest offenders, and a good deal of destruction was done.

73. *Breaches of Forest Law.* — Thirty forest offence cases were inquired into in the Hill Reserves during the year, and compensation from Re. 1 to Rs. 15 accepted. The majority of cases were for the illicit removal of timber, firewood, bamboos, &c., and there were seven cases of cattle trespass. The total amount received as compensation was Rs. 108·55.

74. There were eleven cases reported in the Eastern Circle, of which six were for illicit felling of timber, three for illicit removal, one for illicit chena cultivation, and one for setting fire to grass land. Eight cases were taken to the police, the accused being convicted in only four cases. One case was compounded for Rs. 36, and two dismissed after inquiry.

75. No forest offences were inquired into by the Assistant Conservators of the North-Western and North-Eastern Circles.

76. Compensation was accepted by the Assistant Conservator, Northern Circle, in two cases of illicit felling and removal of forest produce.

77. In the South-Eastern Circle seven cases were reported, two of which were tried in the Police Court and the accused fined. Compensation to the amount of Re. 1 to Rs. 5 was accepted in the other cases. Three cases were for removal of timber without a pass, two for illicit felling, and one for bringing charcoal. One case was for unauthorized fishing in the Yala game sanctuary.

78. In the Province of Sabaragamuwa prosecutions were instituted in fourteen cases, none serious. The accused were convicted in only seven cases, and six cases were acquitted or discharged and one withdrawn.

79. The number of forest offence cases instituted in the Southern Province during the year was extraordinary. The total number was 2,773, of which 2,609 came from the Tangalla district. The vast majority of the cases were for illicit chena cultivation, but there were 89 unauthorized felling and removal cases and 28 "other offences." Convictions were obtained in 1,168 cases, and 1,440 cases were pending at the end of the year.

80. Twenty-four forest offences were tried in the Police Courts at Kandy, Matale, Gampola, Hatton, and Nawalapitiya, only one of which was of any importance, being for the felling of 73 trees at Weragantota. Of these cases, seven were for illicit felling, six for theft of forest produce, four for illicit removal, six for unauthorized chena cultivation, and one for collecting horns. There were fourteen convictions, and four cases were withdrawn.

81. In the Eastern Circle only six cases were tried, all of illicit felling and removal of timber, except one for chena cultivation. Only three convictions were obtained.

82. Two cases were tried in the Point Pedro Police Court, Northern Province, and the accused were fined in both instances.

83. Ninety-five forest offence cases, nearly all of illicit chena cultivation, were inquired into departmentally in the North-Western Province and compensation accepted.

84. Only one case is reported from the North-Central Province, in which a man was fined in the Anuradhapura Police Court Rs. 100 for felling five halmilla and other trees.

85. Thirty-nine forest offences were inquired into in the Province of Uva. Of these, seventeen were tried in the Badulla and Bandarawela Police Courts, and convictions obtained in eight cases. Compensation was accepted in all the other cases.

86. *Natural Reproduction.*—The annexed statement embodies reports of the Assistant Conservators on the seed and seedling crops of the principal forest trees in their Circles during the year :—

Seeding of Forest Trees and Seedling Crops during 1901.

N.B.—G stands for Good.
F ,, Fair.
M ,, Moderate.
B ,, Bad.
? ,, No report given.
The first letter stands for seed crop, the second for reproduction.

87. The Assistant Conservator, Eastern Circle, states that though on the whole the seeding of the different species was good, that of ebony and palai in the southern part of the Circle was poor.

88. In the North-Eastern Circle the Assistant Conservator states that the trees generally seeded well and reproduction was fair, but the flowering of the ebony was bad.

89. The seed and seedling crops in the Northern Circle appear to have a fair average.

90. The Assistant Conservator, Province of Sabaragamuwa, reports that the seedling crops were generally poor. He states : "In the forest round the Peak and towards Kitulgala I found the most abundance in sapotaceous plants, while duns and horas were, if anything, rather behind in seedling reproduction." He made the interesting discovery of a true calamander in flower, a tree which was believed to be almost extinct.

91. A report is submitted by the Government Agent, Central Province, from the Forest Ranger, Nawalapitiya, on the flowering, seeding, &c., of trees in his range, from which it appears that the natural reproduction was on the whole excellent, but that the seedling crops of del were poor owing to collection of the seeds by natives, and of kahata, owing to patana fires.

92. *Artificial Reproduction.*—There are six plantations in the Hill Reserves at Nuwara Eliya, Nanu-oya, Haputale, Ohiya, Kotagala, and Galboda, of the total extent of 597 acres. They have cost up to beginning of the year Rs. 27,933·47, and during the year Rs. 2,370·87 was spent in upkeep.

93. During the year the old Kintail estate, in extent 768 acres 3 roods 29 perches, was purchased from Mr. Walter Agar for the sum of Rs. 18,000 for the extension of the Galboda Fuel Plantations. Of these, 192 acres in extent are good forest, and it is believed that the sale of timber and firewood from it will go far to recoup Government for the purchase of the land.

94. In the Eastern Province Rs. 509·49 was spent in upkeep and fire protection of the teak plantations, reported to be 710 acres in extent, especially those in the neighbourhood of Tumpalaincholai.

95. The North-Western Circle has four plantations, one at Sundapola of 92 acres, one at Badagamuwa of 26 acres, and one at Kumbalpola of 10 acres, all planted with teak, jak, mahogany, halmilla, &c., also a teak plantation of 59 acres near Puttalam. The total cost of these plantations had been up to the beginning of the year Rs. 21,818·95, and Rs. 785·35 was spent on their upkeep during the year.

96. There are five plantations in the Western Province : one entirely of jak at Kalutara, 27 acres in extent, planted 18 ft. by 18 ft. ; one of 47 acres near Mirigama of jak, domba, and lunumidella ; and three small teak gardens at Kotadeniya, Hanwella, and Mugurugampola. The total cost to beginning of the year has been Rs. 3 482·63, and the sum of Rs. 450 was spent in upkeep during the year.

97. In the Province of Sabaragamuwa there are three rubber plantations, one at Edangoda of 27 acres and eleven years old, one at Yatapowa 37 acres and ten years old, and one at Korossa 27 acres and three years old. The total cost of these to end of the year was Rs. 12,547·91 or Rs. 137·88 per acre, and Rs. 687·75 was spent on weeding and collection of seed during the year.

98. The sum of Rs. 688 was spent in the weeding, &c., of three plantations in the Province of Uva: that at Judge's Hill is 24 acres and planted with sapu, grevillea, jak, &c., that at Moratota 18 acres, and a small nursery planted at Mediriya.

99. No additions were made to any of the plantations during the year, but 3½ acres were abandoned in the Kalutara jak plantation.

100. The total extent of the plantations at the end of the year was 1,800½ acres, and their total cost was Rs. 76,746·60, or Rs. 42·63 per acre.

101. *Improvement Fellings.*—In the North-Western Circle creepers and lantana were cut over 36 acres in compartments 5 and 6 of the Badagamuwa forest. The jak plants and self-sown seedings of pehimbiya, milla, &c., over 110 acres of the north-west block of the same forest, were weeded, supplies put in, and jak seeds dibbled in. In the north-eastern block of the same forest, 172 acres in extent, all worthless trees interfering with the growth of valuable species were cut out. Creepers were cut over 109 acres in compartment 1 of the Galagedara block. The total cost of the work was Rs. 585·49, and Rs. 234·30 was received by the sale of timber, &c., taken out.

102. Thinnings were made in the forest near Kannia and Andankulam, in the North-Eastern Circle, resulting in 1,475 cubic yards of firewood being cut and brought out at a cost of Rs. 448·50.

103. In the Northern Circle creepers were cut over 275 acres in the Mandaklaar forest, and 2,326 suppressed and inferior trees were cut out of 640 acres in the Iranaimadu forest. Creepers were also cut over 121 acres of the Kulamurippu forest.

104. Thinnings were carried out in Galway's Land, Nuwara Eliya, in the Hill Reserves, at a cost of Rs. 47·09.

105. The total area over which improvement fellings were carried out was 1,474 acres.

106. More than one Assistant Conservator has wrongly reported work carried out in plantations as improvement fellings.

107. *Communications and Buildings: Roads.*—The following is a list of the forest roads and paths in charge of the Department at the end of the year:—

[For table see page G 10.]

108. It will be seen that the total length of cart roads, bridle paths, inspection paths, &c., was 10,855½ chains, or 138 miles.

109. In the Hill Reserves Rs. 414·37 was spent in opening 214 chains of 6-ft. road in the Galboda Railway Fuel Plantations, Rs. 1,008·24 in cutting 591 chains of bridle path in the Sita Eliya reserve, and Rs. 273·55 in cutting 512 chains of inspection path in the Kandapola reserve. The sum of Rs. 1,776 was also spent in the Circle in bridge building and other expenses.

110. The sum of Rs. 345·16 was spent in the Eastern Circle in opening 829 chains of 10-ft. cart road in the Koralai forest.

111. There are twelve cart roads, one inspection path, and one tramway trace in charge of the Assistant Conservator, North-Western Circle. Extensions to the length of 815 chains were made to four roads at a total cost of Rs. 682·96, and repairs were effected to two others at a cost of Rs. 246·25.

112. In the Northern Circle one road, 120 chains in length, was re-cleared at a cost of Rs. 13·44. A number of fallen trees were removed from another road, the work costing Rs. 33·44. A bridge was also built on this road at a cost of Rs. 60.

113. The sum of Rs. 140·12 was spent in the Western Province in tracing two paths for the bringing out of firewood and making two embankments.

114. In the Southern Province Rs. 139·75 was spent in opening paths 153 chains in length in the Punugalgoda and Sorodeniya forests.

115. The total sum spent during the year in extending and repairing forest roads, &c., was Rs. 6,030·81.

* Taken over from Railway Department. † Not known.

117. It will be seen that there are two Assistant Conservators of Forests' quarters, sixteen Forest Rangers' quarters, two Clerks' quarters, two Depôt-keepers' quarters, three Forest Overseers' quarters, seventeen circuit bungalows, two plantation bungalows, two offices, five depôt sheds, six watchers' huts, two cooly lines, and one elephant shed.

118. In the Hill Reserves Rs. 40 was spent on the Forest Ranger's quarters, Hatton, in adding a bedroom and in repairing the dining-room and verandah and whitewashing. New posts were supplied to the Forest Ranger's quarters at Nanu-oya, and it was whitewashed at a cost of Rs. 100, and the Forest Ranger's quarters at Nuwara Eliya were repaired at a cost of Rs. 21·50.

119. The Forest Ranger's quarters at Pottuvil in the Eastern Circle were repaired and two doors supplied for Rs. 49·53. The circuit bungalows at Punanai and Mankeni and Tumpalancholai were repaired and rethatched at a cost of Rs. 344·37.

120. In the Puttalam range of the North-Western Circle repairs were effected to the Forester's quarters by the Public Works Department, but the fence was repaired by the Forest Department at a cost of Rs. 14·75. The Forest Rangers' quarters at Chilaw and Dambulla were repaired at a cost of Rs. 130·42. The circuit bungalows at Pyrandawa and Nariyagama were improved and repaired for Rs. 50. The office at Puttalam was rethatched at a cost of Rs. 48·20, and the watcher's hut at the Teak Garden, Puttalam, put in repair for Rs.15.

121. In the Kurunegala range Rs. 115·79 was spent in making extensive repairs to the Forest Ranger's quarters and Rs. 59·02 in rethatching and whitewashing the clerk's quarters. The sum of Rs. 152·87 was spent in repairs and rethatching the three circuit bungalows at Kankaniyamulla, Sundapola, and Pallekele. Minor repairs were effected at a cost of Rs. 57·26 to various forest huts, cooly lines, &c. Four buildings—the depôt shed, Kurunegala, the Inspector's hut at Ratpaha, the elephant shed at Hapumukalana, and the cattle shed at Badagamuwa—were abandoned during the year.

122. The sum of Rs. 206·50 was spent in repairing the walls, floor, and roof, and in rethatching the Kituluttu circuit bungalow in the North-Eastern Circle, and Rs. 70·50 in thatching and repairing the floor of the Forest-Ranger's quarters, Horowapotana. The depôt shed in the Trincomalee depôt was blown down during the year, and was rebuilt at a cost of Rs. 55.

123. In the Northern Circle the Forest Ranger's quarters at Oddichuddan and Puvarasankulam were rethatched and some small improvements made at a cost of Rs. 74·36. The circuit bungalow at Chempankandu was rethatched for Rs. 70·17.

124. A new roof was put in the Udugama circuit bungalow in the Western Province at a cost of Rs. 250.

125. In the Central Province repairs costing Rs. 351·85 were effected to the depôt buildings, Kandy. The sum of Rs. 49·52 was spent in whitewashing, &c., the quarters of the depôt-keeper, Matale. House rent and tax amounting to Rs. 258 was paid for the Forest Ranger's quarters, Nawalapitiya.

126. The sum of Rs. 60 was spent in rethatching and whitewashing the Forest Ranger's quarters at Anuradhapura.

CHAPTER IV.

YIELD AND WORKING.

127. The under-mentioned timber and forest produce was brought out of the forest by departmental agency and sold during the year. The figures for 1900 are given for purposes of comparison :—

		In 1900.	In 1901.	Rs. c.
Rough timber :—				
Sold by the log	...	1,610	1,178	7,343 30

			178,467 28

129. It will be seen from the above figures that, as regards timber brought out by departmental agency, the quantities sold both by the log and by the cubic foot were much less than in the previous year, in the latter case less than one quarter. This was the result of this Department ceasing to supply Public Departments with sawn timber, in accordance with the recommendations of the Commission appointed by His Excellency the Governor on 29th November, 1900. The quantity of ebony sold was only 18 tons more than last year. There were better sales of small round timber from depôts, but 3,666 cubic yards less than in last year were supplied to the Railway.

130. As regards timber sold standing in the forest or cut on royalty, there was a falling off of 4,969 trees, and 37,765 cubic feet of rough timber, while 6,097 cubic feet of sawn timber were sold. Of ebony, 154 tons were sold to purchasers and cut and removed by them. There was a very large increase in sales of shingles, small round timber, firewood, and charcoal, but also a large falling off in sales of minor forest produce of Rs. 8,636.

131. The reasons for the increase or decrease in sales of timber and forest produce in the different Circles and Provinces as compared with last year's figures are explained below :—

132. *Hill Reserves.*—There was a very large increase, amounting to Rs. 13,997·10, in the sale of firewood, resulting from the great demand at the camp of the Prisoners of War at Diyatalawa, and increased sales to the Railway Department and at the Talawakele Depôt. There were small decreases in sales of timber sold by cubic foot, shingles, and posts.

133. *North-Western Circle.*—An increase of Rs. 9,064·10 resulted from the sale of dead ebony, and Rs. 3,519·25 from sale of standing trees. There were small increases in sales of most of the other descriptions of forest produce. The fall in the price of hora caused a decrease of Rs. 6,811·84 in the sales of rough timber by the cubic foot, and there was also a decrease of Rs. 736·59 in the value of firewood supplied to the Railway Department.

134. *Eastern Circle.*—No timber was sold standing in this Circle during the year, though Rs. 14,000 was offered and refused for 1,656 trees stamped in the Koralai forest, and the result was a decrease under head "Rough Timber sold by the Log" of Rs. 6,100·25. So little timber was taken by the Public Works Department during the year that there was a decrease of Rs. 6,047·90 in sales of timber sold by the cubic foot.

135. *North-Eastern Circle.*—The very large decrease of Rs. 23,584·97 in the sales of ebony resulted from the lower prices which prevailed during the year and from a large quantity remaining unsold in the Central Depôt, Colombo, at the end of the year. There was also a decrease of Rs. 4,970·47 in sales of rough timber by the cubic foot. On the other hand, there was an increase of Rs. 3,116·70 in sales of rough timber in the log.

136. *Northern Circle.*—The sale of 175 first class logs of satinwood at the Central Depôt, Colombo, and the issue of a considerable quantity of na and palai to the Irrigation Department, resulted in a substantial increase of Rs. 17,854·62 in sale of rough timber by the cubic foot. There were also increases of Rs. 1,212·34 for ebony sold and Rs. 797·50 for firewood sold by the ton. Under head "Rough Timber sold by the Log" there was a considerable decrease of Rs. 6,563·08, as no purchasers could be found for trees stamped for sale in the reserves.

137. *South-Eastern Circle.*—Sales of satinwood at the Central Depôt, Colombo, resulted in an increase of Rs. 1,178·46 under head "Rough Timber in the Log."

138. *Western Province.*—There was an increase of Rs. 4,284·10 in sales of firewood owing to increased demand from proprietors of estates and mills, also small increases in sales of timber in the log and charcoal. On the other hand, there was a large falling off, amounting to Rs. 10,845·02, on sales of sawn timber, owing to the requirements of the Public Works Department not being supplied by the Forest Department; also a decrease of Rs. 4,046·94 in sales of rough timber by the cubic foot owing to the falling off of the demand for hora timber for plumbago casks and boat-building.

139. *Province of Sabaragamuwa.* — Sales of hora in the Kegalla District resulted in an increase of Rs. 4,403·49, and sales of firewood to tea estates produced Rs. 2,885·91 more than last year. On the other hand, there was a very large decrease of Rs. 15,833·81 in sales of sawn timber owing to Public Departments obtaining their supplies from other sources.

140. The following figures show the value of timber and forest produce supplied to Public Departments and private persons respectively during the year, the figures for 1900 being given for purposes of comparison :—

	Public Departments. Rs. c.	Private Persons. Rs. c.	Total. Rs. c.
1900	98,860 50	299,696 92	398,557 42
1901	74,291 47	277,915 14	352,206 61

141. These figures show that there was a falling off of Rs. 24,569 in sales of timber to Public Departments and of Rs. 21,781 to private persons.

142. *Central Timber Depôt, Colombo.* — The considerable surplus resulting from the year's working of the Forest Department was largely due to the sales of timber, &c., at the Central Depôt, Colombo, which was worked by Mr. G. T. Gillam, Superintendent, with the help of a clerk and depôt-keeper.

143. The following timber, &c., of the total value of Rs. 129,291·06, was sold there during the year :—

				Rs. c.					Rs. c.

Ebony ...	Logs	148	...	—	7,054 52
					129,291 6

145. The total weight of the 2,140 logs of ebony sold during the year was 576 tons 12 cwt. 3 qr., or an average of 5 cwt. 1 qr. 15 lb. per log.

146. The following statement shows value of timber sold during the year at the Central Depôt on account of each Circle or Province. Outstandings of 1900 credited during the year are also given, so that the amount actually credited to revenue may be shown :—

Circle or Province.	Amount realized in 1901. Rs. c.	Outstandings in 1900 credited in 1901. Rs. c.	Total credited to Revenue. Rs. c.
Eastern Circle	27,571 31	831 38	28,402 69
North-Western Circle ...	23,337 97	150 95	23,488 92
Northern Circle	20,405 74	—	20,405 74
North-Eastern Circle ...	15,233 99	—	15,233 99
North-Eastern Circle (North-Central Province)	14,105 83	854 54	14,960 37
North-Eastern Circle (Trincomalee District)	16,573 12	—	16,573 12
South-Eastern Circle ...	2,794 78	78 95	2,873 73
Central Province	2,213 80	—	2,213 80
Pallegama Grant Lands ...	7,054 52	—	7,054 52
Total ...	129,291 6	1,915 82	131,206 88

147. It will be seen that by far the largest sales were on account of the North-Eastern Circle, the total for its three divisions being Rs. 45,912·94. The Eastern, North-Western, and Northern Circles also did well. Some 44 tons (148 logs) of ebony were received from the Pallegama Grant Lands, and the Government share amounted to the considerable sum of Rs. 7,054·52. The quality of the ebony was very good. No timber was received into the Central Depôt for sale from the Western and Sabaragamuwa Provinces or Hill Reserves.

148. The following auction sales of timber were held at the Central Depôt during the year :—

Date.	No. and Description of Logs.	Realized. Rs. c.
June 3 ...	549 logs ebony (144 tons)	19,742 75
Do. ...	10 „ satinwood (flowered)	1,946 33
July 3 ...	24 „ satinwood	
Do. ...	12 „ halmilla	
Do. ...	11 „ milla	1,595 70
Do. ...	5 „ palai	
Do. ...	25 „ ranai	
August 3 ...	100 „ satinwood	
Do. ...	24 „ halmilla	
Do. ...	8 „ milla	8,170 18
Do. ...	5 „ palai	
Do. ...	10 „ ranai	
September 2 ...	481 „ ebony (135 tons)	18,111 54
Do. 3 ...	76 „ satinwood	
Do. ...	5 „ halmilla	4,612 16
Do. ...	5 „ milla	
November 4 ...	90 „ satinwood	6,996 92
December 2 ...	1,021 „ ebony (260 tons)	30,090 58
Do. ...	26 pieces ebony	
Do. 5 ...	100 „ satinwood	
Do. ...	20 „ halmilla	7,025 91
Do. ...	10 „ ranai	
Do. ...	2 „ karumpanichai	
	Total ...	98,292 7

149. Private sales at the Central Depôt during the year were also good. The following logs and pieces of timber and bags of charcoal were disposed of for the total sum of Rs. 30,998·99 :—

Ebony ...	... Logs 89*	Ebony ...	... Pieces 2
Satinwood ...	... „ 295	Halmilla ...	... „ 1
Halmilla ...	... „ 117	Palai ...	... Posts 1
Milla ...	... „ 28	Charcoal ...	... Bags 284
Palai ...	... „ 74		

* 37 tons 5 cwt. 3 qr. 2 lb.

150. The highest price realized for ebony during the year was Rs. 200 per ton, and for flowered satinwood Rs. 17·10 per cubic foot. The prices obtained for other timbers of good quality averaged Rs. 2·48 per cubic foot for satinwood, Rs. 2·05 per cubic foot for halmilla, Re. 1·40 per cubic foot for milla, Re. 1·41 per cubic foot for palai, and 65 cents per cubic foot for ranai.

151. Expenditure in connection with the Central Depôt amounted during the year to Rs. 21,777·71, which included pay of officers, freight by steamer, native vessel, and rail, landing, and depôt charges.

152. The following timber was lying unsold in the Central Depôt at the end of the year :— 1,133 logs (345 tons) ebony, 157 logs satinwood, 49 logs halmilla, 188 logs palai, 37 logs ranai, 27 logs karumpanichai, 280 satinwood railway sleepers, and 2 sample pieces.

153. As regards methods of transport, 1,401 logs were brought to the Depôt by steamer, 1,270 logs by native sailing vessels, 1,267 logs by rail, and 183 logs by canal.

154. An important event in the history of the Central Depôt was the grant during the latter part of the year, by His Excelleney the Governor, of the old quarters of his bodyguard in Slave Island for the extension of the Depôt. It is over half an acre in extent, and its acquisition will, for the present at any rate, end the difficulties experienced for years past in finding space for the storage of timber. An additional advantage in obtaining this land is that it gives access to a piece of land, 1 rood 2 perches in extent, adjoining the Royal Engineers' yard, belonging to the Forest Department, but of which it has hitherto never been able to make any use.

155. *Free Grants of Timber.*—These were freely made during the year. In all 157 grants of timber of all sorts, much of it of valuable descriptions, of the total value of Rs. 11,702·48, were made.

156. The largest grant was of 25 logs satinwood, 30 logs halmilla, and 10 logs palai, of the value of Rs. 1,551·80, to the late Ratemahatmaya of Hurulu palata for the repair of his Walawwa.

157. The next largest was of 56 logs, of the value of Rs. 737·20, to the Wesleyan Mission, Kalmunai, for the building of a new English school.

158. The usual grant of six logs this year, of the value of Rs. 271·56, was made to the Industrial School, Kalaar, Eastern Province.

159. The District Road Committee, Batticaloa District, was allowed 64 logs, of the value of Rs. 218·16, to rebuild two bridges in minor roads.

160. By far the greater number of grants were made for the building or repair of village schools. Timber of the value of Rs. 2,303·99 was given free to thirty-two schools.

161. Grants of timber of the value of Rs. 834·59 were also made for the building or repair of sixteen Village Tribunal buildings.

162. Two European planters were given timber of the value of Rs. 215·57 for the repair of bridges on their estates used by the public.

163. Free grants were made for ten plague hospitals, six dispensaries, four ambalams, one resthouse, five circuit bungalows, eight ferry boats, fifteen edandas or log bridges, and three amunas.

164. Timber was given free for the rebuilding of twenty-one native houses accidentally burnt down. Seven grants were made in connection with the Giant's tank settlement, four in connection with the manufacture of salt, and a large number for agricultural purposes.

CHAPTER V.

FINANCIAL RESULTS.

165. The following statement shows totals of revenue and expenditure (exclusive of free grants and estimated value of timber on lands sold) in the different Circles and Provinces :—

Province or Circle.	1900.				1901.			
	Receipts.	Charges.	Surplus.	Deficit.	Receipts.	Charges.	Surplus.	Deficit.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.

Total Provincial Administration ...	165,594	87,496	78,098	—	145,526	65,166	80,360	—
Grand Total	419,621	335,515	132,708	48,602	393,053	286,732	141,141	34,820
Nett	—	—	84,106	—	—	—	106,321	—

166. It will be seen from this statement that the only administrative charges which show deficits are the Northern Circle of Rs. 1,433 and the South-Eastern Circle of Rs. 5,715. Both these Circles showed deficits in 1900 and 1899. The North-Eastern Circle, which was in charge of Mr. A. M. Walker, shows the largest surplus, Rs. 25,890. Large surpluses are also shown by the Southern Province, Western Province, and Province of Sabaragamuwa.

167. The following statement shows the financial result of the operations of the Forest Department during the year, estimated in the way followed in previous years :

	Rs.	c.
Revenue.		
Cash credited in the Treasury	370,401	2
Value of timber, &c., sold to Public Departments and credit taken ...	22,651	39
	393,052	41
Value of free grants	11,702	43
Estimated value of timber on lands sold	41,051	25
Total ...	445,806	9
Expenditure.		
Disbursed by the Department	286,732	0
Surplus ...	159,074	9

168. Taking everything into consideration, the financial condition of the Department can be epresented by the following statement :—

In favour of the Department.	Rs.	*Against the Department.*	Rs.
Surplus	159,074	Outstandings due by the Department at the close of the year	1,152
Outstandings due to the Department at the close of the year	8,053	Outstandings due to the Department at the beginning of the year	16,945
Outstandings due by the Department at the beginning of the year... ...	986		
	168,113		18,097

Nett amount in favour of the Department, Rs. 150,016.

CHAPTER VI.

GENERAL REMARKS.

169. The Assistant Conservator, North-Western Circle, reports that the year had been a most unhealthy one, and that all the officers had been laid up with fever off and on. A similar report is made by the Assistant Conservator, North-Eastern Circle. On the other hand, the Assistant Conservator, Northern Circle, states that "the health of the officers was on the whole better than usual, as there was not so much fever about."

170. During the year the compilation of a manual of the more useful timber trees and plants of the Western and Sabaragamuwa Provinces was completed by Mr. F. Lewis, Assistant Conservator of Forests, from notes taken during the last few years. Some 270 species are described in it, and the botanical and vernacular names given. It will no doubt prove, when published, a very useful little work for forest officers and the general public.

171. Mr. Lewis accompanied Mr. Herbert Wright, Scientific Assistant, Royal Botanical Gardens, on two expeditions in his Circle, the objects being to "secure more complete knowledge of the distribution of Diospyros and Sapotaceæ families" and "to collect data respecting the genus Palaquium."

172. The compilation of this report was again delayed this year owing to non-receipt of Circle and Provincial reports, the last not being received till the 9th June.

ALFRED CLARK,
Acting Conservator of Forests.

Colombo, June 12, 1902.

Form I.—Revenue credited during 1901.

14.—Changes and Movements in the Staff.
15.—Receipts and Expenditure.

1.—GENERAL.

THE organization of the Department upon modern lines has continued, and is becoming fairly complete in the case of two of the three main subdivisions which are proposed, the Scientific and the Botanic and Horticultural Gardens Divisions. The third, or Division of Experimental Gardens, is as yet only under consideration, but it is hoped that it may soon be organized. The Scientific Division, which includes the Director, Mycologist, Entomologist, Chemist, and Assistant, is charged with the scientific investigation of the flora of Ceylon, both indigenous and introduced, with special reference to the economic uses of the plants and the diseases that attack them. The work of this division includes the upkeep and working of the laboratories, library, herbarium, and museum, tours in the Island for the study of plants, cultivations, and diseases, the giving of advice and assistance in all such matters to officials and cultivators, personally and by letter, and, most important of all, the continual carrying on of researches upon the physiology and pathology of plants, their structure, distribution, and other subjects. Successful practical applications of science must be based upon thorough scientific investigations; such work is laborious and needs long periods of time, and it is of the greatest importance that the scientific officers should have the greater portion of their time at their disposal for such work. The appointments of the Entomologist and Mycologist in particular have met with much appreciation, and their help is so constantly sought that a very great part of their time is taken up with personal visits, interviews, and correspondence. In the past year a great amount of work has been carried out by these officers, whose reports are given below, and the result of their work is becoming clearly apparent in the greater freedom from disease of many districts and estates. The Colony has on the whole been free from any very serious epidemics of disease during the year, and the agricultural public has become much more alive to the advantage of keeping a sharp look out for the first appearance of disease and of immediate treatment thereof.

The Director and Chemist have completed an investigation into camphor and have published results, showing a fair possibility of this product proving remunerative as a cultivation in Ceylon. It is already being tried on several estates, and if it prove successful will add another to the few minor products that are as yet cultivated in the tea districts. Investigations of citronella oil, indiarubber, and other products have been continued. The good results of similar work in past years are now becoming apparent in the increasing export of, and the high prices obtained for, indiarubber and coca, both originally introduced by this Department, and which may now be looked upon as new minor industries in Ceylon.

The Assistant has continued his researches into the mode of formation of ebony, calamander, and similar timbers, and into the important problem of the formation of rings in tropical timbers. He has also explored the guttapercha-yielding districts of the south-west, and investigated our local gutta-producing trees. Some of these have been found to yield a gutta in fair quantity by simple tapping, without its being necessary to sacrifice the tree. The gutta is not of good quality, but it is not improbable that it may prove commercially valuable.

The Director has completed the investigation of the flora of the Maldive Islands, including the cultivated plants. The results have been published in the new scientific journal, the "Annals of the

Royal Botanic Gardens, Peradeniya," of which two numbers have been issued during the year, containing several papers by members of the staff and one by a visitor, who worked for some time in the Peradeniya laboratory. Several scientific workers from abroad have used the laboratories and other facilities now available here, which are becoming widely known. A small branch laboratory has been constructed at Hakgala, with sleeping and living accommodation attached to it, thus rendering that garden of much greater value than hitherto.

Several numbers of the "Circular" have been published during the year, and appear to have met with much appreciation. The circulation of this little periodical continues to increase; it is sent to local subscribers at the lowest possible rate, merely sufficient being charged to cover postage (50 cents for twenty numbers). The articles in this journal are popularly written, and do not overlap those in the "Annals."

In view of the extension of the work of the Department, and the increasing interest manifested in "new" products and in scientific methods of cultivation and preparation of economic products, a reorganization of the Economic Museum at Peradeniya has been commenced, and at the same time an attempt is being made to collect and classify all available information about the existing or possible economic products of Ceylon; the great masses of letters, cuttings, notes, references to books, &c., which have accumulated at Peradeniya during the past century are being arranged in files of a somewhat new design, which will be kept in a public consulting room at the museum, and the specimens in the museum are being renewed and re-arranged in accordance with the files, so that inquirers may be able to obtain all available information about products in which they are interested with the least possible trouble to themselves and to the staff of the Department. At the same time a *résumé* of the chief facts of importance about all known economic products of the Island, native, cultivated, or imported, is being put together in book form, and is now in course of publication in the form of supplements to the "Annals." It is hoped that in this way a reliable work of reference may be completed within two or three years, which may prove valuable to planters, officials, and others interested in the products of the Island. The first chapter, dealing with gums, resins, indiarubber, &c., is now almost completed, and part of it has already appeared in print with the second number of the "Annals." The local annual subscription of Rs. 2·50 also covers the supplements.

The second division of the Department (Botanical and Horticultural Gardens) includes the five gardens in different parts of the Island, and it has lately been decided by Government to open a sixth very small garden in the new park at Nuwara Eliya, with the view of trying what can be done on the peculiar soil of that place. The main duty of this division is to introduce and cultivate a few specimens of every possible kind of plant that may prove of use or interest, and to provide beautiful gardens for the pleasure and instruction of the public. At the same time it provides instruction and advice on horticultural matters, and supplies seeds and plants to the public in small quantity. It is no part of the duty of a botanic garden to make large scale trials of economic plants or to supply large quantities of seeds or plants. This is the work of an experimental garden, and hitherto such an institution has been wanting in Ceylon, but negotiations have been in progress during 1901 with the object of providing such a garden, where experiments may be tried on a commercial scale with staples or with plants which may become staples. Such experiments may include not merely the cultivation of considerable areas of one plant, but the trial of manures, different modes of cultivation and treatment for disease, modes of preparation of products for market, and their actual sale upon the open market. Such an institution may serve as an object lesson, and supply when necessary large quantities of seeds or plants, besides testing the commercial possibilities of different cultivations. It may also undertake the very desirable work of breeding new and improved races and varieties of cultivated plants.

Office work continues to increase, and the correspondence with planters and others is becoming very heavy. Working rooms have been provided for the Entomologist and Mycologist by the alterations of the godowns under the library suggested in last report. The library has been largely added to by purchase, gift, and exchange, and is steadily becoming a really good working collection.

An Ordinance (No. 5 of 1901) has been passed enabling the Government to take any necessary steps, such as fumigation, quarantine, or exclusion, to prevent the introduction of disease into the Island with plants from abroad. The import of cacao plants from the Dutch Indies has already been prohibited under this law.

A system of small gardens at village schools having been inaugurated by the Department of Public Instruction, this Department has supplied large quantities of seeds and plants of the best useful kinds for distribution to the schools. Good results in the introduction of new cultivations and increased interest in agricultural progress may be hoped for from this work.

The total cost of the Department, including special votes, has been Rs. 72,087, against Rs. 71,740 last year. The receipts from sales, though the number of purchasers has increased, show a fall from Rs. 4,658 to Rs. 3,741, owing to the cessation of the demand for rubber seed.

2.—NOTES ON ECONOMIC PRODUCTS, &C.

Hitherto the notes given annually under this head have been somewhat irregularly arranged, the more important products being treated first. Commencing with the present year the various products will be dealt with according to the different classes to which they belong, following the scheme of classification adopted in the Handbook of Economic Products of Ceylon now in course of issue.

Class I: Gums, Resins, Caoutchoucs, Guttas, &c.—An investigation into the gums and resins produced by the wild plants of Ceylon has been started, with the view of finding out which are of value for local use as substitutes for imported articles. It seems improbable that any of our local products of this kind are good enough or cheap enough for export.

Indiarubber may now be regarded as established as a minor product in the low-country, and an export of appreciable quantities of Hevea or Para rubber has begun; 66 cwt., valued at Rs. 11,986, were exported in 1901 to England. Being carefully prepared, this rubber is of excellent quality, and has sold for prices much exceeding those of the best Para rubber sold on the same market from wild sources. On one occasion 4*s.* 1½*d.* per lb. was received for "good biscuit," against 3*s.* 9½*d.* for "best Para." A recent market report says: "Ceylon sells with eager competition. The rubber is much liked, and in large quantities would bring high prices." Extension of planting continues in suitable districts, and probably 3,000 acres are now in rubber. In most cases the rubber is mixed with tea and planted by roads and ravines, and perhaps this is for most estates the most satisfactory method of planting under present circumstances.

There has been no demand for, or planting of, guttapercha during the year. At the instance of the Forest Department Mr. Wright was deputed to explore the forests of the low-country of the south-west and test the gutta-yielding trees there found. His report below gives a brief statement of work done, and full details will be published after receipt of analyses and valuations.

Camphor has been a good deal planted during the year, the chief check being the difficulty of getting good seed, there being no local supply as yet. A Circular has been issued by the Department showing, as the result of some years' experiments, that the tree can be successfully cultivated in many parts of the Island, and that the twigs and leaves yield about 1 per cent. of camphor by a simple process of distillation, a yield which offers a prospect of proving remunerative. The great risk attending this cultivation is that the high price is due to the action of the Japanese monopoly, and that if Ceylon became a serious competitor, the monopolists could probably lower the price enormously by allowing large harvests for a few years. Hence the cultivation of camphor is not to be recommended as the main industry for any estate, but only as a minor industry.

Class II.: Oils.—The export of cocoanut oil rose from 443,959 cwt. in 1900 to 453,531 in 1901, and that of copra from 362,467 to 439,865 cwt. At the same time there has been a considerable rise in the market value of both these articles, due to short crops in other countries.

The export of citronella oil has also increased from 1,409,058 lb. to 1,430,168 lb., but has not reached the figures of 1899. The investigation of the oils, mentioned in last report, has continued, but is not yet complete. The industry is in a very depressed state, owing to overproduction and adulteration, the latter being so bad that even good local oils do not obtain the value that is really due to them. Prices have reached a very low ebb, 9½ to 10*d.* per lb., and land is going out of cultivation in the grass. On the other hand, the new Java oil, mentioned last year, is selling in increasing quantities at high prices (often 1*s.* 4*d.*). It is not in reality so superior to the best Ceylon oils as the price would indicate, but it is not adulterated, and has no bad reputation to contend against.

Of other oils, the export of cinnamon oil has slightly increased, from 72,904 oz. in 1900 to 73,493 oz., but has not yet reached the figures of past years. Trial plantations of castor oil have been made by various planters during the year; the plant grows well here, and there seems no reason why Ceylon should not export this oil as well as India.

Class III.: Dyes and Tanning Substances.—The export of sapanwood has been 7,180 cwt. Planting of *Acacia decurrens* continues in the higher districts.

Class IV.: Fibres.—There has been a slight decrease in the total export of coir, our chief fibre, the figures being rope 13,030, yarn 75,788, fibre 122,526 cwt., as against 12,572, 87,415, and 115,090 cwt. in 1900. Of palmira and kitul fibres, the export has been 12,353 cwt. and 2,541 cwt. No interest has been taken in other fibres. Sisal hemp is being taken up in India, and the available stock of plants last year was mostly sold to planters there.

Class V.: Drugs.—An investigation of the native drugs of Ceylon is being set on foot, and plots of all possible species are being laid out at Peradeniya (see Mr. Wright's report).

"Of cinchona, the export has materially increased, almost reaching the figures of 1899. Increased interest has been shown in matters relating to this cultivation, and seed has been purchased from abroad and planted in various districts. There is reason to hope that by the planting of improved varieties, and by the practice of grafting of better kinds on poor stocks, this product may again become of importance in Ceylon." (J. B. Carruthers.)

There has been an appreciable export of coca leaves, which have sold on the London market at 1*s.* to 1*s.* 2*d.* per lb., a price equal to that of the South American kinds.

Class VI.: Foods and Edible Products.—Of rice and dry grains there is nothing of special interest to report. The export of cocoanuts has decreased, having been 14,850,781 nuts, as against 14,995,909 in 1900; that of desiccated cocoanut has increased from 13,604,913 lb. to 14,055,493 lb. Tapioca or cassava cultivation continues to spread in the low-country as a minor and catch crop, but no tapioca is made from the tubers, which are eaten like yams. Fruit trees continue to sell steadily from the gardens, but there is but small sign of any attempt to cultivate fruit on any large scale for market, if the long-established industries of cocoanuts and plantains be left out of consideration. The vegetable gardens of Nuwara Eliya have been much troubled with finger and toe disease.

The export of tea seems at last to be reaching its maximum, and shows a slight decrease on the figures of 1900, viz., 145,188,244 lb., against 148,431,639 lb. Part of the decrease is, however, made up by the export of 1,110,774 lb. of green tea, most of which went to America. The export to Russia and Australia has increased, that of black tea to America decreased, but the decrease is more than made up by the green tea. The year has been one of depression, but prospects of the industry are more favourable, the export to England having been 8 million lb. less, and the stock of Ceylon tea there having been considerably reduced. The average price is the lowest as yet recorded, 6·86*d.*, against 7·20*d* in 1900, but towards the end of the year prices were considerably improved. The industry has not suffered from any very serious outbreaks of disease, and planting has not extended. The remarks made last year on the general prospects of tea in Ceylon continue to hold.

Coffee exports show a further fall from 10,777 to 9,722 cwt. Experiments on grafting coffee are in progress in the gardens (see report of Acting Curator).

"Cacao exports show a very large increase on the figures for 1900, being 49,459 cwt. against 33,476. This, as was foretold in last report, is due to some extent to the lateness of the crop of last year, some of which is credited to 1901, but is also largely due to the energetic measures being taken in combating the canker, and especially in reducing the number of diseased pods, the quantity of 'black cacao' having been reduced in some instances by 75 per cent. The prices obtained for cacao, even the best qualities, have been much below those of last year; this is perhaps more due to the conditions of the home market than to any difference in quality of the product, but the increasing proportion of Forastero kinds may have something to do with it. The fall of price should spur planters to consider the questions of cultivation of more productive trees, and the selection of seeds for planting. The canker has, as a rule, been seriously attacked on approved methods, and a marked decrease in the number of diseased trees is apparent. There are, however, many estates where no hindrance is put in the way of the invading fungus." (J. B. Carruthers.)

Of spices there is little to record. The cultivation of cardamoms is extending, and the export has increased from 537,455 to 559,704 lb. Pepper shows signs of extension of cultivation, and it should at least be possible to dispense with the present large import of this spice. Exports of cinnamon show a rise in bales, a fall in chips, the figures for 1900 being 2,678,111 and 1,863,406 lb., and those for the last year 2,756,270 and 1,516,083 lb. respectively. The "wild cinnamon" again shows an enormous fall to 8,581 lb. bales and 5,066 lb. chips. Vanilla planting has slightly extended. Tobacco cultivation continues to extend in the North and also in the Dumbara district. Of fodder plants there is little to report. An experiment with Swedes is described in Mr. Nock's report. The much-vaunted grass *Paspalum dilatatum* is being tried in many districts, and a report will be issued later as to its success.

Class VII.: Timber, &c.—Mr. Wright's work on the ebonies, &c., is described in his report below.

Ornamental Plants.—Cannas and the small white variegated caladiums have been largely in demand through the year.

JOHN C. WILLIS.
Peradeniya, January 30, 1902. Director.

SUPPLEMENTS.

1.—LABORATORY, HERBARIUM, MUSEUM.

THE two rooms under the west end of the herbarium building were altered by the Public Works Department, and are now the working rooms of the Mycologist and Entomologist. The clerks' offices have been transferred to the large south-west room of the museum, and the whole museum has been turned out with the view of re-fitting and re-arranging it. New and elegant glass cases will be placed in it, instead of the shabby old almirahs in which the specimens have hitherto been deposited; the specimens will be renewed whenever necessary, and the whole arranged on a plan to correspond very much with that of the Economic Museum at Calcutta.

The laboratory work of the members of the staff is described in their reports. The laboratory has been largely used by foreign visitors during the year. Dr. C. Holtermann of Berlin worked here from January 1 to April 27, chiefly at vegetable physiology; Dr. W. H. Lang of Glasgow from February to March, making some interesting discoveries in the domain of morphological botany, such as finding the prothalli of *Helminthostachys zeylanica* and *Ophioglossum pendulum*, and inducing apospory for the first time in a liverwort, *Anthoceros lævis*; Mr. A. G. Tansley of London worked here from February to March chiefly collecting material; Mr. A. K. Coomaraswamy of London at geological investigations from May to September; and Dr. Uzel of Königgrätz from November 21 to the end of the year at entomological research. A number of officials of similar departments in other parts of the world have also visited the laboratories, &c., to study the methods and organization of the institution, *e.g.*, Dr. Stuhlmann, Director of Agriculture of German East Africa; Dr. Van Romburgh, Director of the Java Experimental Gardens; Mr. I. H. Burkill, Assistant Reporter on Economic Products to the Government of India; Mr. D. Hooper, Curator of the Economic Section, Indian Museum, Calcutta; Dr. E. J. Butler, Cryptogamic Botanist at the Calcutta Botanic Gardens; Mr. R. H. Proudlock, Curator of Gardens and Parks, Nilgiris; and others.

A branch laboratory has been opened at Hakgala, and should prove very useful in the work of the Department. Hitherto, owing to the distance of the garden from Nuwara Eliya, and the expense of living in Nuwara Eliya, it has been impracticable to do any scientific work at Hakgala, though it is so good a centre for the study of the hill flora and the higher planting districts. The laboratory contains a living room and two small bedrooms, so that it is now possible to live and work at Hakgala.

The herbarium has been kept in good order. The Maldivian collections of Mr. Gardiner and others have been determined, mounted, and laid in, and also a large number of plants collected by the various officers of the Department when on tour. The herbarium of ferns made by the late Mr. George Wall, and since in the possession of Mr. Justice Lawrie, was purchased from the latter at his retirement, and will be laid in if possible during the next year. The Director's work on the *Podostemaceæ* of Ceylon and India has been continued, and is now nearing completion. Collecting tours, chiefly in search of these plants, have been made in the Nilgiri and Anamalai Hills, in the Khasia Hills of Assam, and in Sikkim, but the opportunity was taken at the same time to visit the various Botanic Gardens, Museums, &c., in the great towns of India, and much valuable information was thus acquired. During the latter half of the year special attention was devoted to the economic botany of Ceylon, and the Handbook of the Economic Products of the Island, mentioned above, was commenced. A complete re-fitting and re-arrangement of the museum was undertaken in connection with this, and will occupy some years, and the files of papers dealing with economic botany are being at the same time re-arranged and made easily available. The opening of the Hakgala laboratory has made it at last practicable to thoroughly study the flora of the hills, and a commencement has been made with an investigation of the different "formations" of plants into which that flora may be divided, with the view of ultimately writing a modern biological flora of the higher districts, and of devising a working plan for the general biological and chemico-geological survey of the soils, climates, and floras of Ceylon, which is so much needed.

J. C. WILLIS.

2.—MYCOLOGIST'S REPORT.

ABOUT 300 inquiries have been received by the Government Mycologist in regard to diseases of plants, both environmental and caused by attacks of parasitic organisms. The plants diseased were chiefly economic, only a few being of horticultural and merely ornamental value.

The investigation of the subject of the distribution of the spores of the most harmful parasitic fungi on tea, as planned in last year's report, has been carried on, and has already yielded information of value. This important question is being studied with a view to obtaining knowledge which will help in the discovery of some means of protecting tea from these evils, and of determining the periods at which preventive measures will have the greatest beneficial results.

Researches in the laboratory have been continually carried out on the life-histories of fungi attacking economic plants of Ceylon, and among other things the perfect form of fruit of the Gray Blight fungus (*Pestalozzia Guepini*, Desm.) has been discovered, which throws light on the means the fungus possesses of tiding over times of drought or other conditions inimical to its life. This also completes the life-history of the fungus, formerly unknown.

In the course of investigation and experiment various planting districts have been visited; among others Ambagamuwa, Deltota, Dikoya, Wattegama, Moneragala, and Passara.

Cacao canker and the preventive and curative measures have been continually watched, and other questions as to selection of seed, pruning, shade, hybridization, growing of cuttings, &c., have been studied.

The amount of damage done to crops in the Island by attacks of fungi during 1901 has been distinctly less than in previous years; this is due partly to unfavourable conditions of weather for the fungi, but also to some extent to an increased use in planting districts of sanitary methods of cultivation. Tea blights have been less harmful, though the disease of tea roots has not decreased noticeably. Pruning with a view to getting rid of leaf blight in certain areas and burning or burying the prunings has been of great value in leaf disease.

Cacao canker has been combated fairly generally, and with the spread of knowledge of methods of prevention and cure, and the existence of numerous instances of success in using these means, the gradual extermination of this danger to cacao culture may be hoped for. A Circular has been published giving full details as to methods of treatment. This much-to-be-desired end is, however, much hindered by extensive acreages being still allowed to be attacked by the fungus without let or hindrance.

J. B. CARRUTHERS.

3.—ENTOMOLOGIST'S REPORT.

DURING the past year the usual work of correspondence, research, and experiment has been carried on. Local correspondence shows an increasing interest in, and appreciation of, the work and aims of the Department. In addition to advice to local planters, letters of inquiry and specimens for report have been repeatedly received from Southern India, especially since the much-to-be-regretted death of Mr. Lionel de Niceville, the talented Entomologist lately attached to the Indian Museum. Owing to the scarcity of students in this particular branch, considerable collections of "scale insects" (*Coccidæ*) have been received from foreign countries for determination.

In January an extended tour was made through the Maskeliya, Dikoya, Bogawantalawa, and Balangoda districts, during which I had an opportunity of investigating on the spot several prominent insect pests, notably the "Tea Tortrix" (*Capua coffearia*, Nietn.), and a kind of "white ant" (*Termes* sp.) that has been doing considerable injury to otherwise healthy tea plants. Meetings of the local branches of the Planters' Association in the same districts were attended, at which information on economic entomology was given and discussion invited.

In March a trip to Jaffna, occupying two weeks, was made in company with Dr. Holtermann, a distinguished scientific visitor. The principal object of this tour was to investigate the insect pests of such native-grown products as tobacco, gingelly, palmirah, and the various grains. These crops were found to be remarkably free from attack this year, though several serious pests have been previously reported from the Northern Provinces.

The Gampola district was visited in July, where the "Shot-hole borer" (*Xyleborus fornicatus*)—a serious enemy of the tea plant—was made the special subject of investigation.

In the same month the Rangala district was visited for the purpose of studying a pest of the cardamom plant.

In August a special visit was made to Colombo, at the request of the Municipal Council, to study the habits of the "Lake fly" (*Chironomus* sp.), a pest that has attracted much attention in the neighbourhood of the Colombo lake. These flies do not cause any actual injury, but make themselves objectionable by their habit of swarming into the bungalows at night (attracted by the lights), invading the food, and immolating themselves in the lamps in enormous numbers. The complete life-history of the insect was discovered, and an exhaustive report made advising the best means of removing the nuisance.

A tour in the Kelani Valley was planned for November in connection with the so-called "Mosquito Blight" of tea (*Helopeltis antonii*). But this visit was postponed until the conditions should be more favourable for study.

Experiments are being conducted, with satisfactory results, to ascertain the connection between attacks of tea-mites and pruning. These experiments tend to show that injury from these pests may be very largely avoided by regulating the time of pruning, but a longer period is required to obtain accurate data.

Experiments are also being conducted with a view to the efficient destruction of "white ants" (termites). Various means have been tried, but nothing promises such complete success as bisulphide of carbon, which proved absolutely fatal to these pests in the limited experiments that I was able to make. The difficulty is that at present, owing to the exceedingly inflammable nature of the gases given off by the bisulphide, the shipping companies refuse to carry the compound, and it appears impossible to obtain it in any quantity in Ceylon. With the advent of special steamers for the transport of explosives, this difficulty should eventually be removed.

The question of quarantine continues to receive attention. All Wardian cases received at the Botanical Gardens are promptly fumigated with hydrocyanic acid gas before the contained plants are distributed. The Legislative Council has now passed an Ordinance providing for the effective treatment of all imported plants, and a fumigatorium is being erected for the purpose in Colombo. It is hoped that imported fruit (a fertile source of introduction of noxious insects) will be subjected to similar treatment. The same Ordinance empowers the Government to absolutely prohibit the importation of proclaimed plants from countries known to be subject to specially dangerous pests of such plants.

Sericulture would appear to be an industry particularly suited to the natives of Ceylon. Efforts are being made to introduce a good stock of silkworm, and if the results are satisfactory, it is hoped that the Sinhalese may be induced to interest themselves in the cultivation of silk.

Circulars dealing with the *Helopeltis* insect and the "Mosquito-Malaria" question have been issued from the Department.

Fuller particulars of the miscellaneous work of the division of entomology will be published shortly in the form of a Circular.

E. ERNEST GREEN.

4.—SCIENTIFIC ASSISTANT'S REPORT.

DURING the past year my time has been spent investigating several branches of economic botany, and for convenience the report is arranged under separate headings.

Ebony.—The work on Ceylon species of *Diospyros* has been continued, and I have now succeeded in obtaining samples of every species known in this Island, together with material from India, China, Malaya, Australia, and the Andaman Islands. A comparative account of the value of ebony from all countries is being prepared, and to ensure completeness I shall be very grateful if any one interested will forward specimens of any species of ebony whenever possible. In Ceylon, by direct observations in the forest, two species have been found, which, though ordinarily regarded as of little value, are capable of producing an ebony which certainly comes second to calamander in point of beauty and hardness. These species (*D. oocarpa*, Thw., and *D. affinis*, Thw.) are not found in the wet zones, but occur, often in abundance, in the intermediate and dry zones of Ceylon.

The greater part of my work has, however, been spent in the forests of the wet zone, and here I have been able to find abundance of calamander trees in flower and fruit, together with quantities of material of several of our rarest species. One species of ebony (*D. oppositifolia*, Thw.) is limited to the upper part of a hill in the Southern Province, and the timber from it was associated by past botanists with that of calamander. I regret that such is not the case, the timber being, when freshly felled, of a dirty white colour and the centre of the stem invariably hollow. Furthermore, the abundance of parenchyma, the presence of wide medullary rays, and the large-lumined water-conducting elements which characterize this species prove it to be of poor value when compared with other *Diospyros* timbers.

Seeds of every Ceylon species have been obtained, propagation by layering and cuttings has been effected, and we have now a representative collection of the Ceylon *Diospyros* growing in these gardens.

The flowers, hitherto regarded as mainly dioecious (*i.e.*, male and female on different trees), have been studied from fresh material in the forest, and in this branch of work many interesting facts of purely systematic value have been obtained. Though in Ceylon we have only twenty species of *Diospyros*, yet at least nine of them show a departure from the dioecious condition. Some are monoecious only, others monoecious or dioecious, and others are dioecious or polygamous. The complicated relations determined for the different species show how inadequate an account may be which is based on examination of herbarium material alone, and the necessity to work out questions concerning the morphology of the flower in the forests.

Many flowers and fruits have been found which are new to science, but an account of them, together with remarks on the evolution of sex in Ceylon species of *Diospyros*, will be published elsewhere.

Guttapercha.—On the suggestion of the Director, an investigation into the yield of guttapercha from Ceylon species of *Palaquium* was instituted. This work has been done almost entirely in the forests of the wet zone, and up to the present some eight species of *Sapotaceæ* have been experimented with.

The results from two species of *Palaquium*, viz., *P. petiolaré*, Engl., and *P. grande*, Engl., have been satisfactory. The yield of guttapercha from these species exceeded all expectations, since in point of quantity it was in excess of the latex yield from Para rubber trees in Ceylon. Furthermore, there is no necessity to fell the tree as is done in Malaya, and though they are of slow growth, they constantly bear abundance of fruit.

Samples of the guttapercha have been prepared in various ways, and should the analytical report upon them prove encouraging, there will be no difficulty in collecting several hundreds of seeds and seedlings from the districts investigated.

Seeds of many other sapotaceous plants have been received from all parts of the world, and a comparative account of the nature and development of the laticiferous system in them is now being arranged.

Medicinal Plants.—A revised account of the medicinal plants now growing in Ceylon is being prepared. Large experimental plots have been started, and an analysis is being made of the occurrence, quantity, and nature of the chemical bodies to which the medicinal properties are due.

General.—An analysis of the tea plant is being made in conjunction with Mr. Kelway Bamber, and the results obtained, particularly with reference to the occurrence and quantity of the enzyme, tannin, and starch, the value of certain tests, and the relation of percentage of enzyme to flavour, will soon be placed before the planting community.

Other subjects, such as the comparative value of Ceylon timbers, nitrogen nodules on *Entada scandens*, observations on *Dracæna reflexa*, cleistogamy in *Ruellia tuberosa*, the botany of Hinidunkanda, and the development of sandalwood trees, have received much attention during the past year.

HERBERT WRIGHT.

5.—PUBLICATIONS.

THE following numbers of the Circular were printed during the year :—

Series I., No. 21.—Helopeltis.
22.—School, Bungalow, and Resthouse Gardens, and some Hints on how to plant them.
23.—Cacao Canker in Ceylon.
24.—Camphor.
25.—Mosquitoes and Malaria.

A new purely scientific journal was established under the title "Annals of the Royal Botanic Gardens, Peradeniya," for the publication of the scientific and technical papers issued by members of the staff and other workers in the laboratories and herbarium. These are unsuitable for publication in the "Circular," which is intended only for articles on planting and other topics written in popular language. The papers in the "Annals" are for other scientific men, and for those local readers who take an interest in scientific botany and agriculture. With the view of encouraging the latter, the local subscription rate has been fixed at the lowest possible figure, Rs. 2·50 per annum. These two journals cover most of the lines of work carried on by the Department, with one exception. There are certain useful pieces of work of the nature of compilations rather than original research, but rendering research easier, and for these it is intended to issue supplements to the Annals. The first of these is already appearing in the form of a Handbook to the Economic Products of Ceylon. Subscribers to the "Annals" obtain the supplements free, but when complete they will also be placed on sale as independent books.

Two numbers of the "Annals" have been issued in 1901, containing—

The Royal Botanic Gardens of Ceylon and their History, by J. C. Willis.
The Royal Botanic Gardens of Ceylon as a Centre for Botanical Study and Research, by J. C. Willis.
Fungus Cultures in the Tropics, by C. Heltermann.
Note on the Flora of Minikoi, by J. C. Willis.
The Botany of the Maldive Islands, by J. C. Willis and J. S. Gardiner.
Observations on *Dracæna reflexa*, by Herbert Wright.
Together with Reviews (Disease in Plants by J. B. Carruthers, Tropical Agricultural Journals by J. C. Willis), Notes, &c.

The first supplement commences in part II., and is entitled "A Handbook of the Vegetable Economic Products of Ceylon, Native, Cultivated, or Imported," by J. C. Willis and Herbert Wright.

In addition to the locally published work, the following papers have appeared elsewhere, dealing with work done at Peradeniya :—

Giesenhagen, K., Die Farngattung Niphobolus. Jena, 1901.
Green, E.E., Biologic Notes on some Ceylonese Rhynchota. Entomologist, 1901.
——— Coccidiphagous Larvæ of Eublemma. Journ. Bombay Nat. Hist. Soc., XIII., 1901.
——— Moth-catching by Electric Light at the Boer Camp, Diyatalawa. Entom. Monthly Mag., 1901.
——— Note on the Genus Lecaniodiaspis. Entom. Monthly Mag., 1901.
——— On some Species of Coccidæ from Australia, collected by W. W. Froggatt, F.L.S. Proc. Linn. Soc., N. S. W., 1900.
Lang, W. H., On Apospory in Anthoceros lævis. Ann. Bot., 1901.
——— Preliminary Statement on the Prothalli of Ophioglossum pendulum, Helminthostachys zeylanica, and Psilotum sp. Proc. R. S., 1901.
——— Contributions to our knowledge of the Gametophyte in the Ophioglossales and Lycopodiates. B. A. Rep., 1901.
Parkin, J., The Coagulation of Latex. Indiarubber World, 1901.
Preyer, A., Einiges über Südasiatisches Agrikultur. Berlin, 1901.
——— Ueber Kakao-Fermentation. Tropenpflanzer, 1901.
Prud'homme, E., Un Mission Agricole en Extreme-Orient. Revue des Cult. Coloniales, 1901.
Stuhlmann, H., Studienreise in Nederländisch und Britisch-Indien.
Wilcox, E. M., Glimpses of Tropical Agriculture. Columbus, 1901.
Wright, Herbert, Tropical Timbers and their rates of growth. Calcutta, 1901.

6.—LIBRARY AND OFFICE.

THE additions to the library, apart from periodicals, number about 59 books and 210 pamphlets. The most important additions are :—

Arbeiten d. Bot. Inst., Würzburg, 1871–88.
Campbell, D. H., Mosses and Ferns.
Detmer, Vergl. Physiol. d. Keimungsprocesses.
De Vries, H., Die Mutationstheorie (in progress).
Engler, A., Das Pflanzenreich (in progress).
Gildemeister & Hoffmann, The Volatile Oils.
Giles, Gnats and Mosquitoes.
Hartig, R., Lehrbuch d. Pflanzenkrankheiten, 5th ed.
King, F. H., The Soil.
Lowe, E. H., Fern Growing.
Lowe, E. H., Ferns, British and Exotic, 8 vols.
Payer, J., Traité d'Organogenie Comparée (incomplete).
Scott, D. H., Studies in Fossil Botany.
Strasburger, E., Ueber d. Bau u. d. Verrichtungen d. Leitungsbahnen.
Upcott Gill, The Book of Gardening.
Van Tieghem, P., Traité de Botanique, 2nd ed.
Wiesner, J., Die Rohstoffe des Pflanzenreichs, 2nd ed.
Ward, H. M., Disease in Plants.

The following new journals are also being received in exchange for the publications of the Department, in addition to the many mentioned in previous reports :—

Agricultural Bulletin of the Straits and Federated Malay States.
Botaniska Notiser.
Bulletin du Jardin Imperiale Botanique, St. Petersburg.
Bulletin of the New York Botanic Garden.
Bulletin van het Koloniaal Museum, Haarlem.
Bulletin van het Proefstation voor Cacao, Salatiga, Java.
Contributions du Jardin Botanique, Rio de Janeiro.
Journal d'Agriculture Tropicale.
Manchester Museum Reports.
Rapport Annuel du Station Agronomique, Mauritius.
Report of the Agricultural and Mechanical College, Oklahoma.
Report of the Agricultural Department, Durham College of Science.
Report of the West Java Sugar Experiment Station.

Office work continues to increase. The total number of letters dealt with inwards during 1901 was about 6,450, and of book packets about 1,500, and similar numbers outwards, showing an increase on previous years. Another clerk is required in the Head Office, which has only one trained clerk.

7.—REPORT OF THE ACTING CURATOR, PERADENIYA GARDEN.

DURING the first few months of the year the work carried on was, as usual in the dry season, chiefly the ordinary routine of the garden. I commenced duties on the 12th May, 1901, and the following report is an account of the work done from that date to the 31st December, 1901.

Cooly Labour.—This department received first attention, the main object being to increase the Tamil section, and wherever possible to execute the work on the "piece system."

The cooly staff, originally consisting of 73 Sinhalese and 30 Tamils, is now composed of 39 Tamils and 37 Sinhalese, this proportion ensuring a more constant and competent cooly labour force. The piecework system is applicable to many sections of routine work, and succeeds best in weeding of roads, grass cutting, road making, and in those departments where the healthy propagation of plants is of secondary importance. The system is not popular among the coolies since they are separated from one another between meals, and a fixed amount of work has to be done each day.

A pocket check-roll and the *tundu* system has been thoroughly established, and the labour is therefore controlled as far as possible on estate lines.

The cutting of grass, removal of branch wood, and clearing of trees has been done mainly by contract. In many parts of the garden it has been found advantageous to allow cattle to graze; by this means much labour is saved, the grass is kept very short, and the soil improved, and, providing fines are repeatedly inflicted on owners of cattle who allow their charges to roam beyond the prescribed limits, the introduction is advantageous.

Hitherto the cooly rice supply has not been done departmentally, but since it gives one a better control over the coolies, it has been decided to adopt it at the earliest possible date.

Legal actions have been taken against cooly employees, faulty contractors, and many native visitors, who have wilfully violated the rules of the Department. This, together with repeatedly discharging and fining of faulty officers, has done much to mitigate the illegal habits of native employees and visitors.

Plant Propagation: Seed House.—This has received considerable attention during the year, and in consequence of special studies being carried out in the *Anonaceæ*, *Sapotaceæ*, and *Ebenaceæ*, an extension has been made. During the year upwards of four hundred species, as seeds, have been germinated, many of which have been planted out or used in the laboratory. A few experiments were made to test the germinating capacity of samples of seeds: sometimes by rearing the seeds on the surface of a porcelain dish partially immersed in water, sometimes between sheets of blotting paper kept moist by means of wet tape which had one end in water, and the remainder by sowing in soil. The first of these methods gives very good results, and could be used to great advantage in determining the length of time during which tropical seeds retain their power of germinating.

Cultivation and Experiments.—In this department the main part of the skilled and cooly labour has been used. Large plots of ornamental plants such as cannas, roses, and palms, economic plants such as species of *Crotalaria* now used so extensively as a nitrogenous manure for tea in Ceylon, Para and Ceara rubber, ebonies, guttaperchas, durians, and mangosteens, have been commenced in order to keep up the supply to the public.

Large medicinal plots have been started behind the cattle shed and near the kitchen garden, primarily with the object of making a representative collection of all the more valuable Ceylon species, and secondly, to supply the general public with quantities of especially valuable species. There has been a fair demand for *Brucea Sumatrana*, *Wrightia zeylanica*, and *Ixora coccinea* during the year.

A plot behind the Curator's office has been allotted for the experimental cultivation of fourteen kinds of cocoanut presented to the gardens by W. H. Wright, Esq., Mirigama. In this collection it is satisfactory to note that many of the nuts, particularly the Siam, Maldive, and King varieties, have already begun to sprout. This is a valuable contribution to the garden, and every care is being taken to rear healthy plants.

Experimental cultivations have been established for sandalwood trees. Pot and plot experiments are being carried on in all conditions of soil. We hope to settle whether they are ever parasitic, and the best conditions for development.

Grafting, Layering, and Cuttings.—The Java method of grafting has been used in many of our experiments. "The scion is cut from green wood, and the notch is cut in green wood of the stock. The scion is cut about half inch below the leaves with long cuts on both sides to a long V-shaped apex. A corresponding notch is made in the stock, starting between two leaves. The leaves of the scion and of stock are removed at and just below the graft. The graft is then tightly bound with wax and bark, and a small glass test tube is placed over the whole to keep the air damp, &c." An improvement has been made in this experiment, which enables us to maintain an equable temperature and humidity in the region of the graft.

Coffee.—In the grafting experiments with coffee, I have been principally concerned in determining the ease with which one kind can be grafted on to another. We have tried Arabian, Liberian, Stenophylla, and hybrid coffees with one another, sometimes having the stock an established tree, at other times in bamboo pots. The best results have been obtained with Arabian stock and Liberian scion, and with these reversed.

Mangoes.—Grafting in mangoes is invariably easily accomplished. The Jaffna mango has been grafted on to rupee and honey mangoes, and many others distinguished by the native names, *kohu-amba, giraive-amba, me-amba*, can be grafted easily with one another.

Oranges.—In this division the mandarin has been successfully grafted on to *Citrus indica* and *C. Limonellus*, and the latter on to the mandarin. We are hopeful that good results may yet be obtained in this direction, and experiments will be repeatedly made during the rainy seasons.

Nutmegs.—In order to try and reduce the number of males in plants exported from the gardens, a considerable number of saplings have been grafted by approach. Propagation by layering, leading to an increase of the female trees, has been tried, with some success; in these experiments only 10 per cent. of the layerings rooted, but a considerable increase can be assured by more careful work. We have repeatedly tried grafting female on male trees and *vice versâ*, but so far have no good results to report. In two cases only were we successful in grafting trees in bearing on to sapling stocks; this was by the "approach" method, and not by fitting scion into incision of stock.

Mangosteen. — Successful experiments have been made in layering, but the grafting of the mangosteen on to the Cochin *goraka* is not so easy a matter. We have reason to expect that good results can be obtained by grafting these by approach in the sapling stage, and for this purpose the whole of the year's seed supply of mangosteens has been reserved.

Cacao.—We have been successful in grafting one variety on to another in about 30 per cent. of the experiments. In layering and reproduction from cuttings much labour has been spent. The only successful cuttings have been in soil which is very sandy, practically free from all leaf mould, and supplied with running water at irregular intervals. In one set of cuttings only those situated along the course of a small stream, and therefore subject to occasional miniature floods, were successful. This is an important point to note. The cuttings were taken at all ages, but only the woody ones about as thick as a man's finger were of any use. Young twigs with young and mature leaves were tried in pots of sand covered with glass bell jars, but gave no successful results.

Attempts were made to reproduce the slowest growing of our tropical trees from cuttings, and we are able to report good results in species of *Diospyros*. A large number of *Amherstia nobilis* trees have been layered, but as yet nothing definite can be stated. If we can successfully reproduce this plant it will be a public boon, as its gorgeous flowers render it one of the most beautiful of ornamental trees.* Reproduction of roses by inverting the cuttings and using the heat of the sun's rays as the source of "bottom heat" have been partially successful.

Fruit Trees.—The past year has been very good. The only fruit-bearing tree of the mangosteen in these gardens gave excellent results, no less than 627 fruits being obtained from it during August and September. As previously mentioned, the whole of the seed supply from this tree has been reserved for grafting experiments.

The mangoes were, as usual, a great success, thousands of fruits having being collected during the season. The same can be said of the Cochin *goraka* and the *Rambutans*.

The durians have this year yielded an abundance of fruit. The trees alongside the river drive near the laboratory gave the best results, five of them giving no less than 243 large ripe fruits. The fruits were sold at from 25 cents to Re. 1 each, and the saplings, four or more of which can be obtained from every fruit, realize 25 cents each. It is conceivable that a few acres of the above fruit trees in bearing might turn out very profitable, since they will thrive on poor soils without much attention.

General Changes.—The grounds around the octagon house have been partially cleared, and plots of variegated crotons, amomums, caladiums, cannas, &c., planted to good effect. The grounds around the new laboratory under the herbarium have been cleared, roads made, and the banks well turfed.

A new path has been made from the group of palms in the south garden leading to the Director's bungalow. The bungalow garden of the Director has been re-laid, and additional beds of roses, cannas, &c., have been planted out. A bryophytic house has been commenced, and promises to be a success in every way. Species of Blasia, Aytonia, Pallaricenia, Marchantia, and others are now established. The new oreodoxa avenue is showing up very well, many of the plants being over 7 feet high.

A plant of the "Cannon Ball tree" was planted by T. R. H. The Duke and Duchess of Cornwall and York near the laboratory, and is growing vigorously.

Visitors.—The gardens were visited on 14th April by T. R. H. The Duke and Duchess of Cornwall and York and suite. A memorial tree was planted by them in the Great Circle, near the laboratory. Tea was provided in a pandal erected upon the Great Lawn, and an exhibition of elephants bathing in the river concluded the afternoon. The number of foreign visitors during the past year (2,293) shows a slight decrease on that for 1900.

Weather.—The heaviest rainfalls were during the months of April, June, and November, it being 12·03, 14·27, and 18·59 inches respectively. The month of February was the driest in the year, rain falling on four days only, and totalling up to 1·73 inch. The month of December was remarkable for

*Since writing the above I have examined several plants and am able to report that several of the layers have rooted.—H. W.

great wind velocity, and a small rainfall of only 4·72 inches. The total year's rainfall is small compared with that of 1900. The following is the year's rainfall with the average of each month for the last eighteen years :—

Months.	1901. Inches.	1901. Days.	Average for last Eighteen Years. Inches.	Average for last Eighteen Years. Days.
January	2·00	7	2·88	6·16
February	1·73	4	1·62	3·80
March	2·19	9	4·65	8.44

Total Rainfall for 1901			84·11	184

HERBERT WRIGHT.

8.—REPORT OF THE SUPERINTENDENT, HAKGALA GARDEN.

Buildings.—Considerable improvements and additions have been made to the buildings during the year. The cloth ceilings to the Superintendent's office and one bedroom have been removed and replaced with pine boards painted white. The remaining portion of the verandah roof has been ceiled with *murutu* boards and oiled. New planks have been fitted in the verandah to form a shelf for plants. Two double doors have been fitted into the bedroom to the south-west of the sitting-room. Two flights of steps have been laid from them into the back yard. These alterations have very greatly improved the building both in appearance and comfort.

New quarters for the Clerk and Foreman have been built. The building contains four rooms, with kitchen, bathroom, and verandah. It is substantially built with stone walls, Calicut tiled roofs, cement concrete floors, and good cement drains. This supplies a long-felt want, and is much appreciated. The above works have been carried out by the Public Works Department.

A new building for the use of botanists and others for scientific research has been built under the supervision of the Superintendent. This building is situated to the south-east of the Superintendent's bungalow, and contains a large work-room, a dining-room, two small bedrooms, kitchen, bathroom, a small verandah, and servant's room. The work-room, sitting-room, and one bedroom are fitted with chimney and fireplaces. All the woodwork and shingles for this building were obtained from the garden property. It has already been occupied by Mr. A. K. Coomaraswamy from the 11th to the 24th August in the study and mapping out of the bands of limestone in the district, and by the Director from the 4th to the 18th September.

The quarters for the first and second upper gardeners, temporarily occupied by the Clerk and Foreman, were overhauled in October. The plastering of the walls and the ceiling cloth were repaired, and the whole building was whitewashed. The little kitchen was put in repairs, and the lavatory, which was in a very dilapidated and decayed state, has been removed and replaced by a new one. The roofs of the cattle sheds, old cooly lines, carpenter's shed, and packing shed have all been re-thatched.

New shading has been fitted up on wires on the inside of the propagating house. This is a great improvement over the old way of having the shading outside, as in windy weather it was almost impossible to keep it in place, and it was frequently being destroyed.

Drives and Paths.—At the beginning of the year much time was spent in repairs to the main drives and paths. 286 yards of the main drive and 1,221 lineal yards of 4-foot wide paths were repaired. The other paths in the gardens were all attended to and kept in good order until the heavy rains in the afternoon of the 21st October, when no less than 2·73 inches fell in about 1½ hour. This falling in so short a time and the land being steep caused a great rush of water. Culverts and drains were choked, and much damage was done. The main drive was dreadfully cut up and made impassable, gravel and metal washed away, and even the foundation stones weighing over 7 lb. each were ploughed up and carried away for long distances. No such damage has been done in so short a time for the last twenty years. Temporary repairs were at once made, but it will take some months to put the main drive in good order again. I am pleased to report that sanction was obtained for extra labour for this work. Large quantities of metal have been collected, the repairs are being carried out as quickly as possible, and will be completed early in the new year.

The bridle path across the patana, connecting the gardens with the new public road to Ambawela railway station, has been considerably improved during the year. With the kind help of the adjoining estates, to which our thanks are due for giving labour free, 262 yards of the main road was cut through a piece of heavy jungle. This has much improved the gradient, and enables us to do away with the long zig-zag. 540 yards of this road, beginning from near the new laboratory, has been widened and improved, retaining walls have been built across two streams, and many rocks have been blasted and removed, so that a horse can now be easily ridden along the whole way.

292 feet of new 4-foot paths were made near the new laboratory and in the nursery. Several culverts were renewed in the paths in various parts of the gardens. The path at back of Superintendent's office was re-made, and a stone drain, 90 feet long, was laid to carry off the surface water.

Fernery.—No alterations or additions were made in the fernery. The majority of the beds were dug up, new soil added, and large quantities of supplies put in. The high winds in July and August and the heavy plumps of rain in October did much damage in the way of breaking branches of trees, fern fronds, and loosening the orchids from the trees.

I am sorry that I have again to report that a considerable number of orchids were stolen from the trees in the early part of the year. This is very disheartening, for, besides much trouble and expense, many of them had taken years to establish.

Nurseries and Plant Sheds.—Three of the plant sheds in the nurseries, which have been in use for several years, and the timber being decayed, were so badly injured by the high winds in August that they have been entirely removed and replaced with new ones. All the materials for these sheds, posts, rafters, &c., were cut from the garden property, and 4,000 bundles of mana grass were used in thatching them. These sheds, which together measure 214 feet long by 4½ feet wide, have been fitted all round with slabs and filled in with new selected soil. They are chiefly used for raising seedlings of the more tender varieties of plants.

During September some rocks were blasted in the line nursery. A retaining wall was built, the ground levelled, and new beds made for cuttings and other nursery work.

A batch of camphor seeds were sown at the end of February, and 5,000 plants were raised from them. The seeds took from two to three months to germinate. Of the camphor cuttings mentioned in last year's report, I regret to state that only about 10 per cent. struck root. As plants can be so easily raised from seeds or layers, it is a waste of time and labour to raise them from cuttings, as the process is difficult and costly.

The English laurel has now become established in the gardens, and 200 cuttings and 56 layers have been put down in the nurseries, and all look well.

The available stocks for grafting were very poor this year, but some scions of apples and plums have been grafted on to the best of them.

As will be seen below, a great deal of work was done in the nursery during the year in the way of propagating and distributing plants. The number of economic and ornamental trees, fruit trees, and general garden plants distributed during the year was 22,405, besides 1,420 cuttings and 67 packets of seeds. The number of plants—chiefly conifers and ornamental trees and shrubs—that were propagated and supplied gratis to the Board of Improvement, Nuwara Eliya, was no less than 12,668, and 620 were supplied for the grounds at the Diyatalawa Camp.

Borders and Shrubberies, Improvements, &c.—118,523 plants of ornamental trees and shrubs, herbaceous plants, and general garden plants and bulbs were set out during the year in the upkeep of the gardens, the majority, as usual, being showy annuals and edging plants.

Much damage was done in various parts of the gardens by the high winds in June and July, and a good deal of labour was employed in cutting up fallen trees and clearing away *débris*.

The filling in of the lower side of the drive opposite the lower lakelet was completed in January, and 230 square yards of turf was laid down there, which now forms a belt of nice green lawn.

Some improvements were made at the back of the Picnic Arbour. The ground was dug up under the acacia trees and 195 square yards of turf laid down.

A new border, 48 feet long, has been made on the north-east side of the eucalyptus clump and planted with various kinds of liliaceous plants.

The patana around the new laboratory was cleared of undergrowth and weeds, a new 4-foot wide path 234 ft. long was made leading to this building, and 98 square yards of turf was laid on the banks in front.

Fifty large plants of *Cupressus macrocarpa* were planted in the land between the fernery and old eucalyptus plantation. Two hundred assorted plants that have become too large for the nursery were also planted out in this land.

The forest track leading from the upper part of the gardens to the large pool under the Hakgala rock has been cleared for a distance of 762 yards, so that it can be used with ease for bringing out posts, fence sticks, and other forest produce frequently required in the gardens.

Classified Herbaceous Garden.—The bank on the east side of this garden, which was broken away by the heavy rains in March, has been rebuilt and turfed.

Rose Garden and Rose Borders.—The rose plants in the several borders flowered very well at the beginning of the year, producing some really fine blooms, but those in the rose garden proper have not done at all well. These latter were all pruned, lifted, and re-planted during July and August. Although some plants have answered to this treatment, the majority have not improved, and I am afraid they will never do any good again. A fresh stock from Europe is now required to replace them.

Flower Garden and Flowers.—No alterations or additions were made in the flower garden, but the usual display of flowers was maintained. The flowers in the beds and borders in other parts of the gardens made a good show from January until the end of May and again in August and September.

A plant of *Magnolia grandiflora* flowered well during November and December. Several of its handsome pure white flowers measured over 10 inches in diameter.

Calophyllum Walkeri, the "Kina Tree" of the Sinhalese.—It may be interesting to state that thousands of these trees flowered most profusely during the first three months of the year. The masses of white flowers in all the forests in this locality were very noticeable.

Casuarina Plantation.—The plantation of *Casuarina montana* has continued to thrive during the year. A small strip of land at the bottom, and another at the top has been cleared and planted, with 275 more plants.

Villebrunia Integrifolia.—The cinchona planted on the plot of land cleared last year below the camphor plantation was all destroyed by sambur deer. This land has now been planted with *Villebrunia integrifolia*, an indigenous plant said to yield an excellent fibre.

Quercus Cerris, "Turkey Oak."—A piece of land above, and to the west of, the *Casuarina* plantation has been cleared up and planted with 1,000 plants of the Turkey oak. This piece of land is good, well sheltered, and it is presumed that this species of oak will do well in it.

Camphor.—The plants in the small plantation have continued to grow well. Several batches of specimens of the leaves and twigs have been forwarded to Mr. Bamber for further experiment in distillation. Six samples of the soil they are growing in were supplied to him for analysis in August, and the very interesting results are published in the Royal Botanic Gardens Circular No 24 published in November. Many inquiries have been made about camphor cultivation during the year, and all have received attention. 2,000 plants have been distributed, and we now have about 4,000 more ready for sending out.

Manù Grass.—Four bundles, 40 lb. each, of this grass, from four different localities, have been supplied Mr. Bamber for distillation.

Ferns.—Six plants of the indigenous tree fern *Alsophila crinita*, with stems 5 to 6 feet long, were despatched in March for the Botanic Gardens at Munich. Large quantities of maiden hair plants and several thousands of fern fronds were supplied to Queen's House and to the King's Pavition for decorations during the Royal visit in April.

New Cart Road to Ambawela Railway Station.—This road is now completed. We sent the first cart through on the 11th February. It is only 7 miles by this road to Ambawela station, against 9 miles to Nanu-oya. On the return journey there is only about 1½ mile of uphill, instead of 4 miles as is the case from Nanu-oya.

Fruit Trees.—Seeds of a good mango were received from the Director of Agriculture, Madagascar, in May, and fourteen plants have been raised from them. These seeds were from trees growing at an elevation of 4,200 feet, and it is thought that they will produce plants that would fruit at the higher elevations in this Island.

Three dozen assorted fruit tree plants were received in July, through the Director, from Australia, but I regret to report that two-thirds of them were quite dead on arrival. Of the remainder, all the figs and a few oranges revived, and are now doing well.

Paspalum Dilatatum.—A small plot of this fodder was sown in the nursery and has grown well. All stock eat it greedily, and it promises to become a very useful addition to the fodders of the up-country districts.

Swedes.—An ounce of seeds of a variety called "Defiance" was sown on the 23rd July on a piece of land 48 square yards. They came up well, and were carefully cultivated, and grew splendidly. The crop was taken up on the 9th December—4½ months from the time of sowing—the yield being 280 lb., or at the rate of 12½ tons to the acre. The largest weighed 8 lb., and measured 24 inches in circumference. The six heaviest weighed 30 lb., the twelve heaviest 52 lb., and the twenty-five heaviest 91 lb. These roots, which are easily produced, possess grand feeding qualities, and if our local butchers would only feed their cattle on them for a month or two before slaughtering, the quality and flavour of the Ceylon beef would be very much improved.

Oxalis.—This pest has continued to spread. The nature of its growth makes it a most difficult plant to eradicate. Nothing but picking out by the hand and burning the tubers seems to have any effect on it. 68½ bushels have been picked out of the nursery and borders during the year. This represents 300 to 400 days' labour.

A weed killer was tried on a small patch, but it simply killed the foliage, and after a few weeks the bulbs grew with renewed vigour. It has now got such a hold of the gardens that, unless some enemy or disease can be introduced to destroy it, it will be impossible to keep it down.

Barbed Wire Fence.—A special vote was granted for wire fencing, and a barbed wire fence has been fixed all round the inner boundary, enclosing about 46 acres. This fence is made of five strands of 4-point barbed wire, fixed on posts 9 feet apart and 5 feet 6 inches high, the total length being 2,062 yards.

A belt of land 24 feet wide has been cleared all round the inner side and planted up with 6,000 plants of the following trees:—*Acacia decurrens*, *Acacia melanoxylon*, *Frenela rhomboidea*, and *Cupressus macrocarpa*, the latter being planted 50 feet apart with the view of their growing into large timber trees. Seven gates have been fixed at convenient points, and galvanized wire netting has been purchased for fixing along the upper boundary on the forest side in the hope of keeping out small wild animals, such as mouse-deer, porcupines, hares, &c.

Water Service.—A special vote was made to the Public Works Department to bring a supply of water to the gardens. This has been accomplished by damming a permanent stream at Sita Eliya, from which 2-inch piping has been laid, leading the water into the old reservoir in the upper part of the gardens, the distance being about 1½ mile. This supplies a long-felt want, and when the proposed connections are made with the bungalow, laboratory, Foreman's quarters, nurseries, and other parts of the gardens, it will be a great boon, and will greatly facilitate the cultivation and general work of the gardens.

Visitors.—The number of visitors recorded this year is much less than last, being only 1,530, against 1,818 last year. This is mainly due to no record being kept of parties who visited the gardens and did not sign the book kept for that purpose. The largest number of visitors in any month was 241 in April; the smallest was 25 in June.

Weather.—The weather this year has been remarkable for the persistence of the south-west monsoon (which, though not so heavy as usual either as regards wind and rain, lasted on and off right up to December) and the very late and light north-east monsoon. The absence of the usual dull foggy weather in November and December was very marked. It was not until the last four days of the year that this sort of weather set in.

The total rainfall for the year was only 82·16 inches on 203 days, against an average for 17 years of 91·13 inches on 208 days. This shows 8·97 inches short of rainfall, but only 5 of rainy days. The low rainfall in January, April, May, and December is responsible for this. The wettest months were June with a rainfall of 15·42 inches on 23 days, October 12·18 inches on 22 days, and November 14·19 on 20 days, totalling together 41·79 inches on 65 days, being a little over half of what fell in the other nine months. The driest months were February, July, and August, with a rainfall of 2·51, 3·10, and 1·64 inches, totalling 7·25 inches on 44 days. The greatest fall in any 24 hours was 3·98 inches from the 26th to the 27th June, against 4·24 inches from the 12th to 13th December of the year before.

The following is a record of the details of the weather for each month:—

January was remarkable for dull misty days, the absence of sunlight, and a very light rainfall. The temperature was also very low all through the month. The total rainfall for the month was only 3·61 inches on 18 days. This is no less than 4·72 inches under the average of rainfall, but two over the average of rainy days. This proves to be the second lowest on record, the lowest being in 1888, when only ·26 inch fell on 4 days.

The wind, as last year, was very light all through the month, and the direction was fairly steady from the south-east, against north-east last year.

February this year was a very remarkable month, for instead of the bright cold mornings and cloudless sky, which is usual, there was dull misty weather, often light rains in the afternoons, dark foggy nights, and at times much rumblings of thunder in the north and east. The rainfall was normal, being 2·55 inches on 11 days, against the average of 2·57 inches on 8 days. Heavy rain fell on the 4th and 26th, and light showers from the 18th to 26th.

The pressure of the wind was light, with the exception of the 17th and 24th, when it blew moderately strong from the east, but on the 13th it turned to the south-east for some time.

March.—The dull weather continued up to the 16th, and was more like December than March. From the 16th to the end of the month it was fine, though the afternoons were generally dull and at times quite foggy. The total rainfall for the month was 6·40 inches, which fell on 10 days. This is 1·19 inch above the average of 17 years, though the number of rainy days is exactly the average. Heavy rain fell on the 12th, 13th, and 16th, the total for the 3 days being 5·21 inches.

The pressure of the wind was very light all through the month, and the direction was steady, from the east and south-east.

April.—This month was also remarkable for being dull and with quite a number of misty, foggy days. Although the total rainfall was 3·19 inches below the average, the number of days on which rain fell was 2 above the average. The total rainfall was 4·58 inches, against an average for 17 years of 7·77 inches.

The rainfall for the first quarter totals only 17·10 inches on 56 days, and the average for the first quarter for 17 years is 23·28 inches, so that, although the number of rainy days are 6 in excess, the rainfall is short by no less than 6·18 inches.

The pressure of the wind was light all through the month, and the direction was fairly strong from the east and south-east, with the exception of the 17th, when it turned to the north-east, and on the 17th it veered round to the south-west, the next day it turned to the east, the following day to the north-west, and back on the last day of the month to the south-east.

May was unusually dry and calm. During the latter part of the month it was close and the temperature ruled high. The two first days were fine, heavy rain fell on the 3rd, the 4th and 5th were fine. Light showers fell on the next 4 days, followed by 6 very fine days. Then heavy rain fell on the 16th, measuring 1·72 inch. From the 18th to the 29th it was again very fine. Slight showers fell on the 29th, and heavy rain on the 31st.

The total rainfall for the month was only 4·87 inches, which fell on 11 days. This is 2·69 inches below the average of 17 years. The rainfall to date this year is only 21·97 inches, against the average of 30·84 inches. This is 8·87 inches below the average for the first 5 months of the year.

As last year, the absence of very strong wind was noticeable. The pressure for the first 4 days was light, it then veered round to the south-west and was strong for 4 days. For the next 10 days it was generally light, being only moderate on the 9th and 12th. On the 20th and 21st it was fairly strong. For the remainder of the month it was very light. In direction it was very variable, being at one time or other from all parts of the compass, but inclined to the south-west and north-west.

June was remarkable for excessive rains, very high winds, and dull, sunless weather. With the exception of the 3rd, 12th to 16th, and the 22nd and 23rd, it rained every day. From the 5th to the 9th no less than 6·69 inches fell. During the 24 hours ending 9.30 A.M. on 27th 3·98 inches fell. This is by far the heaviest fall we have had for some years.

The total rainfall for the month was 15·42 inches, which fell on 23 days. The rainfall for this month is the highest since 1888, when 15·53 inches fell. The average for this month for 17 years is 7·65 inches, so that this year exceeds the averages by 8·77 inches, or more than double. The excess of rainfall during this month nearly makes up for the shortage in January, February, April, and May.

The pressure of the wind was very strong all through the month, with the exception of the 13th, 23rd, 25th, and 26th. During the night of the 4th and 5th and again on the 17th and 18th the wind was very high, and probably gave a pressure equal to a rate of 40 or 50 miles an hour, but the greatest pressure of the gusts registered between 9 and 10 A.M. on the 5th was 6·480 pounds per square foot, being equal to a rate of 36 miles an hour. The total horizontal movement of the air for the month was 5,568·50 miles, against 6,701·70 miles of the same month last year.

July was very windy, dull, and cold. Though rain fell on 21 days, it was very light, except on the 27th, when ·85 inch fell. In this it was the opposite of last July, which was very wet and much above the average. The total rainfall was only 3·10 inches, which is 2·78 inches under the average of 18 years.

The pressure of the wind was very strong for the first 9 days, exactly as it was last year. Then it fell to moderate, and continued so for 7 days, then strong again for 6 days. From the 22nd to the 25th it was moderate, and from then until the end of the month it was strong. The total horizontal movement of the air was 5,615·30 miles, against 6,347·90 last year. In direction it varied from south-west and north-west, the number of days from each quarter being nearly equal.

August proved to be a very dry and trying month. In fact it was the second driest month on record, the driest being in 1898, when only ·61 inch of rain fell during August of that year. Light showers fell until the 9th, the next 5 days being very fine. Then 4 days on which very light rain fell in the afternoons, and from then until the end of the month it was quite dry. The total rainfall for the month was only 1·12, against the average of 4·82.

The force of the wind was, as last year, fairly strong until the 2 last days of the month, when it fell to moderate and light. The direction was much the same as it was in July, but rather more inclined to the north-west. It was quite calm in the afternoon during the last 2 days of the month.

September was showery all through, the rain at no time being heavy. The mornings were, as a rule, bright and fine, with the exceptions of from the 18th to 24th. The total rainfall for the month was 5·11 inches, which fell on 20 days. This is slightly under the average, which for 18 years is 5·86 inches on 18 days.

The pressure of the wind was light or moderate until the 27th, when it was very light for a couple of days, but rose again to moderate on the last day of the month. In direction it was variable, being north-west and south-west for the first 4 days, then from east and south-east for 3 days, from then until the 26th it blew from the south-west and north-west, when it veered round to south-east and north-east for 2 days, and back to south-west for the last 2 days of the month.

October was a very wet month. From the 2nd to the 9th it was very rough, being more like the burst of the south-west monsoon in June than the usual October weather. The wind then fell to light, and was light or moderate from then until the end of the month. The direction of the wind was steady from the north-west, west, and south-west until the 9th, when it turned to the south-east, then back to the north and north-west for 5 days, and from then until the end of the month it was generally from the east and north-east.

The total rainfall for the month was 12·18 inches on 22 days, against an average of 10·40 inches on the same number of days. Heavy rain fell on the 9th, 18th, 21st, and 22nd, and on the last few days of the month. During the afternoon of the 21st very heavy rain fell, 2·73 inches falling in a little over an hour.

November, as usual, was also a very wet month, and, like October, the first 9 days were very rough. No less than 8·19 inches of rain fell during that period, the greatest part falling after noon each day. From the 9th to the 17th it was fine, except for showers in the afternoons of the 12th, 13th, and 15th. From the 17th to 26th it rained every day. The last 4 days of the month were fine. The total rainfall for the month was 14·19 inches, which fell on 20 days. This is 3·37 inches in excess of the average, which is 10·82 inches.

The force of the wind was generally light, with the exception of the 15th to 17th, when it blew rather strong from the south-west. The direction up to the 10th was from the south-east, it then veered round to the south-west and north-west for 10 days. Then back to the south-east for a couple of days, then west and north-west for 3 days, east on the 27th, on 28th it blew strong from the west, and on the 2 last days of the month it was very light from the south-east.

December this year has been a very remarkable month, being for the greater part, until the last few days of the month, bright and fine. Until the 21st, with the exception of the 10th, when ·96 inch fell, there was very little rain. Heavy rain fell on the 21st and 22nd. This was followed by 5 fine days. Then it settled down to heavy rain and thick fog for 2 days, and the last 2 days of the year were dark and foggy with almost constant light rain. The total rainfall for this month was only 8·55 on 18 days, against an average of 14·45 on 22 days, showing a shortage of 5·90 of rainfall and 4 of rainy days.

The pressure of the wind was very light, with one exception, the 20th, when it rose to moderate, but fell again to light next day. The direction was very steady from the south-east, except the 8th, when it blew lightly from the south-west.

The following table shows the monthly rainfall and averages from July, 1883, to the end of 1901, and the number of days on which rain fell during the 20 years 1882 to 1901, inclusive :—

		Jan.	Feb.	March.	April.	May.	June.	July.	Aug.	Sept.	Oct.	Nov.	Dec.	Total.
1901	Rainfall ...	3·61	2·51	6·40	4·58	4·87	15·42	3·10	1·64	5·11	12·18	14·19	8·55	82·16

* Rainfall of half year.
† Average of 20 years.
‡ Average of 18 years January to June, and 19 years July to December.
§ Average of 18 years.

The greatest pressure of the wind during the year was 6·840 lb. per square foot on the 5th June, equalling a velocity of 36 miles an hour, against the same pressure on the 12th June last year.

The mean daily horizontal movement of the air for the year was 84·85 miles, against 90·88 miles of the year before.

The windiest month was again June, with a mean daily horizontal movement of 185·60 miles, against 223·30 miles of the same month last year.

The calmest month this year was January, with a mean of 25·14 miles, against 25·50 miles in February of the year before.

The barometric pressure and temperature of the air for the year are given in the following Table :—

Barometric Pressure (5,581 ft. Elevation).

1901.	Mean.	Range.
January ...	24·576 ...	·180
February ...	24·567 ...	·221
March ...	24·591 ...	·202
April ...	24·523 ...	·225
May ...	24·535 ...	·223
June ...	24·499 ...	·226
July ...	24·485 ...	·282
August ...	24·485 ...	·220
September ...	24·538 ...	·190
October ...	24·506 ...	·286
November ...	24·523 ...	·221
December ...	24·553 ...	·208
The twelve months	24·532 ...	·362
Highest reading	24·698 on January 23	
Lowest reading	24·336 on July 1	

Temperature of the Air.

1901.	Mean.	Range.
January ...	57·7 ...	26·0
February ...	61·6 ...	28·0
March ...	61·6 ...	30·0
April ...	64·0 ...	23·0
May ...	64·8 ...	24·5
June ...	61·3 ...	22·0
July ...	61·2 ...	17·5
August ...	62·5 ...	27·5
September ...	62·8 ...	21·0
October ...	61·6 ...	21·0
November ...	60·7 ...	27·0
December ...	58·3 ...	27·0
The twelve months	61·5 ...	32·5
Maximum ...	74·5 on May 13 and August 26	
Minimum ...	42·0 on January 27 and Dec. 1	

The highest temperature of the sun's rays was 131·0 on the 28th May, against 129·0 on the 1st and 21st and 25th May last year.

The lowest on grass was 33·0 on the 27th January.

The mean amount of cloud was 6·8, against 6·5 of that of the year before.

The cloudiest month was January, with a mean of 8·0, against 8·1 in November of last year.

The brightest months were March and May, with a mean of 6·0, against February and March of the year before, with a mean of 4·5 each.

W. NOCK.

9.—HENARATGODA GARDEN.

THE late Conductor having resigned during the year, Mr. W. Perera, First Foreman at Peradeniya, was appointed in his place. A complete overhaul and re-organization of the garden is now being carried out. The main road has been gravelled and ditched, new walks opened, many new flower beds planted, and the general condition of the garden improved. Several experimental plots of rubber, tea, &c., now no longer needed, have been cleared to make room for trials of other things. It is intended in 1902 to catalogue the entire garden, and to plant several new experimental plots. 210 visitors, other than parties, visited the garden in 1901. The rainfall for the year has been—

	Inches.	Days.		Inches.	Days.
January ...	8·54 ...	13	July ...	9·25 ...	15
February ...	5·79 ...	11	August ...	1·80 ...	12
March ...	5·07 ...	14	September ...	2·37 ...	10
April ...	10·88 ...	18	October ...	11·23 ...	11
May ...	10·94 ...	19	November ...	19·51 ...	20
June ...	15·66 ...	27	December ...	3·69 ...	6

Total, 104·73 inches on 176 days, against 100·83 inches on 177 days in 1900.

The average for the eleven years 1891–1901 is 100·37 inches on 163 days.

10.—ANURADHAPURA GARDEN.

THE garden has been kept in good order. Watering in the long dry season consumes a large part of the labour, and a better water supply would be a great boon. The flower beds have been very effective in display, and many so-called English flowers have done well.

Fruit trees continue to be distributed in the district by the aid of the Government Agent, and 336 have been issued in this way during the year.

11.—BADULLA GARDEN.

THE Conductor having been promoted to Hakgala during the year has been succeeded by Mr. D. T. de Alwis from Peradeniya. The garden has been kept in good order, and is now a great ornament to the town. New cooly lines and plant sheds are much needed.

Pimento has fruited well, and should be worth trial in Uva. *Paspalum dilatatum*, the new Australian fodder grass, has also grown well.

12.—INTERCHANGE OF PLANTS AND SEEDS.

PLANTS or seeds have been received from the following :—

Royal Gardens, Kew; Botanic Gardens, Antwerp, Bangalore, Baroda, Brisbane, British Guiana, Buitenzorg, Calcutta, Cambridge, Capetown, Christiania, Cracow, Gold Coast, West Africa, Hongkong, Jamaica, Madagascar, Malta, Mauritius, Melbourne, Natal, New Zealand, Ootacamund, Penang, Saharanpur, Seychelles, Sibpur, Sikkim, Singapore, St. Petersburg, Stockholm, Sydney, Tokio, West Indies, Zanzibar; Agri-Horticultural Society, Madras; Agricultural Department, German East Africa; Director of Agriculture, Madagascar; Natural History Museum, Paris; Conservators of Forests, Andaman Islands, Bengal, and Travancore; Government Botanist, Madras; The Himalaya Seed Stores; Messrs. Adamson & Co., Melbourne; Messrs. Herb & Wulle, Naples; Messrs. Law, Sonmer, & Co., Melbourne; Messrs. Reasoner Bros., Florida; Messrs. Sander & Co., St. Albans; Messrs. Sprengers, Naples; Messrs. Sutton & Sons, Reading; The Yokohama Nursery Co., Japan; J. Braine, Esq., South Africa; W. W. Cato, Esq., Natal; Dr. Lang, Malacca; H. Chunder Meltes, Esq., Calcutta; A. R. Proschowsky, Esq., Paris; H. Wilson, Esq., China.

Also from the following in the Island :—

Assistant Conservators of Forests, Kurunegala, Ratnapura, Trincomalee, and Vavuniya; Conservator of Forests, Colombo; Forest Ranger, Kurunegala: Messrs. J. P. William Bros.; M. Kelway Bamber, Esq.; W. H. Biddulph, Esq.; R. G. Bruce, Esq.; G. E. Ross Clarke, Esq.; J. Cotton, Esq.; N. C. Davidson, Esq.; C. Drieberg, Esq.; Dr. V. Duke; J. Ferguson, Esq.; G. P. Gaddum, Esq.; T. C. Huxley, Esq.; R. Jackson, Esq.; A. J. Kellow, Esq.; Miss B. Layard; R. H. S. Scott, Esq.; W. H. Wright, Esq.

Plants and seeds have been issued gratis or in exchange to the following :—

Royal Gardens, Kew; Botanic Gardens, Cairo, Calcutta, Chelsea, Madagascar, Melbourne, Munich, Ootacamund, Paris, Saharanpur, Seychelles, Sierra Leone, Singapore, Sydney; Agri-Horticultural Society, Madras; Agricultural Department, German East Africa; Conservator of Forests, Tenasserim Circle, Rangoon; Government Botanist, Madras; Rubber Plantations, Straits Settlements; Messrs. Dammann & Co., Naples; Messrs. Herb & Wulle, Naples; Messrs. Reasoner Bros., Florida; Messrs. Sander & Co., St. Albans; Messrs. Veitch & Sons, London; L. W. Alexander, Esq., New Zealand; Sir Bosdin Leech; H. Ferguson, Esq., Trevandrum; The Comtesse de St. Experz; and Mrs. E. B. Gawne, Malta.

And to the following in the Colony :—

Queen's House, Colombo; Pavilion Garden, Kandy; Queen's Cottage Garden, Nuwara Eliya; the Assistant Government Agent, Chilaw; the Controller of Government Stores; the Police Magistrate, Hatton; the Chairmen, Local Boards, Kegalla and Matara; the Station Masters at Alawwa, Dodanduwa, Peradeniya, Slave Island, and Ukuwela; the Postmasters at Galle, Haputale, and Nuwara Eliya; the Board of Improvement, Nuwara Eliya; the Superintendent, School Gardens, Colombo; the Diyatalawa Camp; the Waterworks Department, Nuwara Eliya; the United Club Grounds, Nuwara Eliya; the Civil Hospital Grounds, Nuwara Eliya; the Nuwara Eliya Church Grounds; M. K. Bamber, Esq.; W. H. Biddulph, Esq.; R. G. Bruce, Esq.; W. Cameron, Esq.; Dr. Chalmers; P. D. G. Clark, Esq.; G. P. Gaddum, Esq.; T. C. Huxley, Esq.; R. Jackson, Esq.; A. J. Kellow, Esq.; Miss B. Layard; J. R. Peel, Esq.; Dr. Perry; W. P. Spurway, Esq.; G. W. Sturgess, Esq.; Mrs. Symons; J. Wickwar, Esq.; H. Wills, Esq.; T. E. Wilmot, Esq.; W. H. Wright, Esq.

13.—ADDITIONS TO COLLECTIONS.

14.—CHANGES AND MOVEMENTS IN THE STAFF.

THE Director was absent in India, partly on leave and partly on service, from January 1 to 12 and from November 21 to December 29. The part of this time counted as service was spent in studying the organization, equipment, and collections of various Indian Botanic Gardens, Museums, &c. Mr. Carruthers acted as Director during both periods. The Curator of Peradeniya was on leave in Europe from May 11 till the end of the year, his place being filled by Mr. Herbert Wright, who has carried on his own duties in addition.

The Clerk and Foreman of Hakgala, Mr. A. Perera, having resigned on being appointed as Assistant to the Superintendent of School Gardens, his place was filled by the appointment of Mr. D. D. Fernando, Conductor of Badulla Garden, who in turn was succeeded by Mr. D. T. de Alwis, First Upper Gardener. The Conductor of Henaratgoda, S. de Silva, Arachchi, having also resigned, was succeeded by Mr. W. Perera, First Foreman at Peradeniya. Mr. J. W. de Alwis, Second Foreman, succeeded to the vacancy thus caused, and Mr. R. de Zylva has been appointed as Second Foreman.

15.—RECEIPTS AND EXPENDITURE.

	Rs.	c.
Salaries (including Exchange Compensation)	33,691	8
Labourers' Wages, Peradeniya ...	7,799	81
For Labour and Improvement :—		
Hakgala Garden	5,024	99
Henaratgoda Garden	2,973	37
Anuradhapura Garden ...	1,999	7
Badulla Garden	1,999	98½
Stationery	292	0
Pots, Tools, Manure, and other Articles for Garden	3,498	81
Descriptive Labels, Cabinets, Books, &c. ...	1,799	23
Purchase of Plants and Seeds ...	349	17½
Upkeep of Racecourse reserve ...	170	0
Travelling Allowance to Director and Staff	3,400	0
Skilled Assistance to the Director ...	2,000	0
Upkeep of Laboratory	999	48
House Allowance to Mycologist ...	1,200	0
Retaining Fees to Agricultural Chemist ...	3,000	0
Publication of Scientific Journal ...	690	68
Special Vote: Wire Fencing at Hakgala Garden	999	64
Purchase of Herbarium of Ferns from Mr. Lawrie	200	0

THE COLOMBO MUSEUM.

REPORT OF THE ACTING DIRECTOR FOR 1901.

NUMBER OF VISITORS.

THE number of visitors for the year amounted to 80,716, of whom 73,463 were natives. The total shows a decrease of 350 compared with last year's number, and a very considerable decrease compared with the maximum recorded (113,889 in 1896).

ADMINISTRATION.

The following changes took place in the Committee of management:—The Hon. Mr. W. T. Taylor, C.M.G., and J. H. Renton, Esq., having left the Colony, were replaced by the Hon. Mr. R. W. Ievers and Stanley Bois, Esq., and the Committee was strengthened by the addition of the Hon. Mr. H. H. Cameron. A further change in its *personnel* was necessitated by the illness and consequent departure on leave of Mr. A. Haly, the Director of the Museum, who was temporarily replaced by the Acting Director

In February Mr. Haly proceeded to Galle to collect specimens and to conduct certain scientific investigations, but his health gave way almost immediately, and he had to return to Colombo at the end of the month. His condition gradually became more and more serious, till it was evident that prolonged rest and change were indispensable, and he left for England in April on furlough. Although some improvement has resulted, and his period of leave has not yet terminated, I fear it is only too certain that his restoration to health is not likely to be so complete as to allow of his returning to take up duties in Ceylon, and that consequently his great abilities and wide local experience gained during his twenty-six years' service here will be lost to the Colony. In the circumstances it would obviously be out of place for me to attempt any review of his work here, even if I were competent to undertake it, but I cannot refrain from expressing my great regret, both on public and on personal grounds, at the loss.

During the period of Mr. Haly's disablement before he left for England, Mr. Gerard A. Joseph, the Secretary and Librarian of the Museum, carried on the work of the institution, and I am indebted to him for some of the details embraced in this report, especially as regards the early part of the year.

BUILDING.

The condition of the building, which was renovated and re-painted at the end of 1900, has been good. Swarms of bees caused considerable annoyance and some damage to paint and plaster by settling in the upper eastern verandah and elsewhere. The asphalted roof over the front porch became damaged by the heat, thus allowing leakage to take place, and it had to be partially renewed. Among the deficiencies of the present building must be included the lack of latrine accommodation for visitors and employés, and arrangements have been made for its provision. The inadequacy of the Museum for the preservation and proper exhibition of the collections already in its possession, and still more for future requirements, has been a matter of general agreement for a long time past, and I trust that it may soon be found possible to grant such an extension of it as will make reasonable provision for the future, besides permitting the exhibition of many articles which have to be kept in the stores at present and are thus inaccessible to the public. The matter is the more urgent since rare specimens, both animate and inanimate, tend to disappear more and more rapidly with the constantly increasing stream of visitors from all parts of the world. At present it is difficult to make suitable provision even for the preservation of new specimens of considerable size, while it is impracticable to exhibit them.

GROUNDS.

The lawns have been maintained in fair order throughout the year. Efforts have been made to improve the condition of the eastern and western portions of the grounds by the method adopted by Mr. Haly for the front lawn; unfortunately the weather has since been such as to prevent much apparent benefit. New piping has been laid and hydrants have been provided in both sections of the front lawn to allow of more convenient and effective watering, and a water meter has been inserted.

FURNITURE.

There is hardly any room for new show cases, but a certain amount of space is available in the entrance hall, and a wall case to occupy it is in course of construction. Much of the glass in the existing cases has deteriorated and become opaque, and new glass has been ordered, but has not yet arrived from Europe. Some small articles of furniture for the Library, and a safe to replace the old one which had become useless, have also been supplied.

PUBLICATIONS.

The List of Moths referred to by Mr. Haly in previous reports made some progress, but its issue was hindered by his illness and consequent absence, and in the latter part of the year it was thought better to discontinue printing it for the time being.

The supply of the Catalogue of Exhibited Coins is nearly exhausted, and it seems desirable that a new edition should be prepared after a revision, and to some extent a re-arrangement of the collection has been effected. The Archæological Commissioner has, with the permission of Government, been kind enough to promise his assistance in this work.

USE OF THE MUSEUM FOR TEACHING PURPOSES.

A suggestion has been made by the Director of Public Instruction that the Museum collections might be utilized by members of his Department as material for elementary instruction in Natural History, &c. While agreeing entirely with the object in view, I am somewhat doubtful whether the present arrangements of the Museum would lend themselves to the carrying out of the scheme in such a way as to be really useful. Certain modifications seem necessary, and these in turn involve some increase in expenditure. It was agreed that an experiment as to the possibility of such instruction, apart from these modifications, should be tried, but I am not aware of the result. I think that such a matter involves questions which can properly be decided only by the permanent Director, and I have left the decision of them to him.

MAMMALIA.

In his report for 1900 the Director recorded the acquisition of a specimen of the large brown Flying Squirrel (*Pteromys oral*, Tickell) and commented on its rarity. That specimen was unfortunately in a bad state of preservation. Through the kindness of G. S. Anderson, Esq., of Ohiya, the Museum is now in possession of an excellent specimen, which has been successfully mounted by the taxidermist, and is exhibited instead of the former imperfect one. Mr. Anderson informs me that the animal is less rare than Mr. Haly had supposed, its nocturnal habits accounting for its being seldom seen or shot.

A good specimen of the Indian Otter (*Lutra nair*), captured in the neighbourhood of Colombo, was presented by D. Lawrence, Esq., of Wekanda Mills, and this has been substituted for the specimen previously exhibited which was old and damaged.

The Government Agent of the Northern Province contributed an elephant skull with tusks measuring 5 ft. 2 in. and 4 ft. 4 in. in length respectively.

The skeleton of the whale obtained from Mannar in 1889, and hitherto housed in a small shed beside the stores, has been transferred to a larger structure of a temporary kind, more conveniently situated at the other side of the stores, where it can be much better preserved and seen. Its former shelter had become dilapidated and would have had to be renewed, and it was judged advisable to effect the change recorded.

No important new additions to the collection have been made during the year.

BIRDS.

A specimen of *Coturnix communis* (Common Quail), not only new to the Museum collection, but not hitherto recorded from Ceylon, was presented by F. Sikes, Esq., of Cloyne.

As the result of a collecting tour undertaken by the taxidermist in the District of Hambantota in April, a number of specimens of birds were obtained, one of which (*Locustella certhiola*) was new to the Museum collection.

The following have been mounted and are exhibited :—

35. Locustella certhiola, Pallas (Pallas's Warbler).
55. Artamus fuscus, Vieillot (Ashy Wood Swallow).
71. Tersiphone paradisi, Linnæus (Paradise Fly-catcher).
73. Rhipidura albifrontata, Franklin (White-fronted Fantail).
106. Pyrrhulauda Grisea, Scopoli (Black-bellied Finch Lark).
126. Xantholæma hæmatocephalus, Müller (Crimson-breasted Barbet).
130. Merops Viridis, Linnæus (Green Bee-eater).
198. Elanus cæruleus, Desfontaines (Black-shouldered Kite).
241. Amaurornis fuscus, Linnæus (Ruddy Rail).
243. Gallinula chloropus, Linnæus (Common Waterhen).
253. Strepsilas interpres, Linnæus (Turnstone).
260. Ægialitis mongolica, Pallas (Mongolian Sand Plover).
262. Ægialitis dubia, Gmelin (Lesser Ringed Plover).
270. Totanus hypoleucus, Linnæus (Common Sand-piper).
271. Totanus glareola, Linnæus (Wood Sand-piper).
279. Tringa minuta, Leisler (Little Stint).
280. Tringa subminuta, Midd (Long-toed Stint).
282. Tringa subarquata, Güldenstadt (Curlew Stint).
308. Pelecanus philippinensis, Gmelin (Gray Pelican).
320. Ibis melanocephala, Latham (Black-headed White Ibis).
328. Anastomus oscitans, Boddært (Shell Ibis).
329. Ardea manillensis, Linnæus (Purple Heron).
333. Herodias intermedia, Wagler (Plumed Egret).
339. Nycticorax griseus, Linnæus (Common Night Heron).
343. Dupetor flavicollis, Latham (Black Bittern).
— Nettapus Coromandelianus, Gmelin (Green-backed Goose Teal).
— Podiceps fluviatilis, Tunstall (Little Grebe).

Examples of *Œnopopelia tranquebarica* (Indian Red Dove), *Hydrochelida hybrida* (Black-bellied Marsh Tern), *Sterna anglica* (Gull-billed Tern), and *Butroides javanica* (Green Bittern) were purchased as duplicates.

REPTILES.

There have been no new acquisitions. A collection of snakes, some of which were valuable as duplicates, was presented by G. H. C. Swayne, Esq., of Sorana.

INSECTS.

Unfortunately Mr. Haly's illness prevented his accomplishing the re-arrangement of the insect collection which he had planned, and to which he referred in last year's report.

BUTTERFLIES.

A very valuable collection of butterflies was obtained by purchase from J. Pole, Esq. Some of the specimens comprised in it are not only new to the Museum collection, but, I believe, to Science.

MOTHS.

The vast task of re-arrangement and re-labelling necessitated by the acquisition of Mr. Pole's collection could only be performed by an expert, and will make great demands on his time when one is available for the work. During the past year it has only been possible to attend to the preservation of the collection.

FISHES.

Work in this department has been chiefly concerned with the re-mounting of such specimens as required it. Several sharks and a sword-fish previously stored away have been prepared and are now exhibited.

CEYLON PRODUCTS.

The following have been added to the collection during 1901 :—

- A Ratemahatmaya's costume. — Exhibited at the Paris Exhibition.
- A Colombo Chetty woman's cloth, richly embroidered. — Exhibited at the Paris Exhibition.
- A Colombo Chetty man's scarf, richly embroidered. — Exhibited at the Paris Exhibition.
- A Mudaliyar's dress, belt, and sword. — Purchased.
- Two sets ivory ola covers, finely carved. — Purchased.
- One set silver ola covers, finely carved. — Purchased.
- A small silver dagoba. Purchased.
- A silver-mounted Ratemahatmaya's walking stick. Purchased.
- A set of old agricultural implements from Uva. Presented by C. J. W. Halliley, Esq.
- An ebony tuappadi. Presented by J. P. Lewis, Esq., C.C.S.
- An antique silver-mounted comb, scorpion pattern. Purchased.
- A horoscope on an ola leaf. Purchased.
- An ancient sword (Kandyan ?). Purchased.
- A gold-mounted tortoise-shell brooch (Jaffna work ?). Purchased.
- A Mudaliyar's hat (Dutch period). Purchased.

MODELS.

The models of the Ratemahatmaya and of the Buddhist priest have been dressed anew and more correctly by persons whose special knowledge ensured accuracy in details.

COINS.

I have already alluded to the desirability of a re-arrangement of this collection, the expansion of which has led to some confusion.

The following coins were added during the year :—

Gold.

Iraka : A duplicate of No. 46 in the Catalogue, rather better preserved. W. 8.

Lakshmi : Duplicate of No. 50. W. 15.

Silver.

Dukatoon, Zealand, 1751 : Similar to No. 96 in the Catalogue, except date and some slight differences in detail.

Two stuivers, West Frisia, 1700 : Similar to No. 126, except date. W. 19.

One stuiver, Holland, 1720 : Similar to No. 160, except date. W. 12.

Tanga, Malacca : Date illegible. Similar to No. 81, design rather more perfect. W. 186.

Tanga, Malacca : Date illegible. Design as in No. 81 ; about *half* size. W. 91.

Tanga, Solor, 1642 : Obverse—arms of Portugal between G and A within circle of dots. Reverse—T A as monogram between D and S, the D being almost obliterated by a monogram difficult to decipher (C L A ?). W. 66.

All the above have been obtained by purchase.

ANTIQUITIES.

The Committee having had under their consideration the subject of the preservation of the ancient carved stones scattered here and there in the grounds, and for the most part unprotected, decided that a rustic structure of a temporary kind should be erected to replace the dilapidated shed which formerly sheltered the large stone Buddha at the back of the Museum, and that the stones referred to, and also some of those in the Antiquities Room and its verandah, should be placed there. Under the supervision of Messrs. Bois and Harward, who were appointed a Sub-Committee to carry out this proposal, a structure which is a great improvement on its predecessor so far as appearance is concerned, and is also very well suited for the purpose it is intended to serve, has been erected, and the stones can now be seen to much greater advantage. This arrangement is avowedly temporary, however, and I hope Sir W. Gregory's suggestion of a *campo santo* detached from the main building, in which all such relics of antiquity might be deposited, may ultimately be acted upon.

In conclusion, I desire to record my sense of obligation to the various officials of the Museum, and especially to Mr. Fernando, the taxidermist, for the assistance they have so readily given me in carrying on the work of the institution.

EXPENDITURE.

The cost of the Colombo Museum in 1901 was as follows :—

	Rs.	c.
Personal Emoluments	13,459	44
Other Charges :—		
Purchase of Books	1,939	69
Binding Books	347	0
Petty Expenses	788	79
Stationery	72	99
Maintenance of Grounds	1,207	10
For Specimens	1,190	58
Preparing, Preserving, and Mounting Specimens	2,642	36
Pay of Collectors	415	5
Conservancy of Latrines	82	78
Travelling Allowance to Staff	380	84
Special Expenditure :—		
Furniture	947	0
Total ...	23,473	62

January 31, 1902.

J. B. SPENCE,
Acting Director.

REPORT OF THE SECRETARY AND LIBRARIAN FOR 1901.

INTRODUCTORY.

THE Director, Mr. Haly, left early in February on a collecting tour in the Southern Province but had to return to Colombo as he took very ill there. On his return to Colombo he got worse and was obliged to go into the General Hospital, and from there on leave to England, I was asked by Government "to carry on the work of the Museum" in addition to my own duties, and did so until 8th April, when Mr. Haly left for England, and Mr. J. B. Spence, M.B. (Medical Superintendent, Lunatic Asylum), was appointed to act as Director, in addition to his own duties The report (for Committee) on the Museum for the first quarter was written by me. This report has been embodied in the general report on the Museum written by the Acting Director.

As the Director, Mr. Haly, will not return to the Museum, I take this opportunity of stating that I am greatly indebted to him in many ways for his earnest support and counsel relating to the work under my charge, and with the rest of the staff regret his severance from this institution, of which he has been Director since its foundation in 1877.

Besides attending to the routine work of the office, to the correspondence and the accounts of the Department, my time and that of my assistant was chiefly taken up with correcting proofs of the two catalogues: Part II., Printed Books, and Part I., Pali, Sinhalese, and Sanskrit manuscripts.

I had to devote some time to the preparation of a list of articles ("valuables") exhibited in the Museum. The list was required for purposes of verification by the Acting Director.

STAFF.

It gives me pleasure to record my indebtedness to my Assistant, Mr. H. M. Gunasekera, for his painstaking care and co-operation in the work of the Library.

FURNITURE.

There being no further room available for book cases, none were ordered during the year.

THE USE OF MUSEUM AND LIBRARY FOR EDUCATIONAL PURPOSES.

In connection with the proposal of the Director of Public Instruction as regards using the Museum for educational purposes, I addressed the following letter to him:—

The SECRETARY AND LIBRARIAN, Colombo Museum, to the DIRECTOR OF PUBLIC INSTRUCTION.

Colombo Museum, July 30, 1901.

Use of Museum and Library for Educational Purposes.

SIR,—WITH reference to your letter No. 336 of 16th July last to the Hon. the Colonial Secretary on the above subject, might I suggest to you the very successful experiment tried in most Museums and by school boards in Europe of offering prizes in essay contests, for making Museums serve as effective educational factors. Printed circulars should be sent out to the head masters and mistresses of schools suggesting conditions of the competition, and asking the teachers to co-operate in making the essay contests as popular as possible.

2. Competitors should be required to choose things (either single objects, or groups, cases, or general collections) which interest them most in the Museum, to describe them, and to say what they teach. As done in the Carnegie Museum, Pittsburg, U. S. A. (where a prize is offered by the Committee), the subject selected should be advertised and the date of opening and closing of the contests notified. Each composition should be limited to a certain number of words, say 1,200. The compositions might be addressed to the Director of Public Instruction. As done by most Museums in awarding the prizes, the judges should not lay special stress on penmanship, but upon spelling, clear expression, and the evidences of general intelligence and original research. The competitors should be allowed to obtain all possible information from reference books, but it should be carefully laid down, as a point of honour, that the composition of the essay should be exclusively the work of the pupil.

3. The contests, if started, will prove of real educational value, and will help to supplement the work of the Museum and Library. The competitive essays will be the means of leading children, not only to take an intelligent interest in our Museum and Library, but also to study nature for themselves.

4. That such contests will make children observe, reflect, and read cannot be doubted; and doing so they will be brought nearer to a sympathetic comprehension of the aims and objects of our Museum and Library.

I am, &c.,

GERARD A. JOSEPH,
Secretary and Librarian.

FINANCES.

The vote of Rs. 1,700 for "Purchase of Books" was exhausted, and an additional sum of Rs. 239·69 was required to meet the cost under that head.

The vote of Rs. 200 for "Binding Books" was exceeded by Rs. 147.

BOOKBINDING.

104 volumes were bound during the year. I would direct attention to my remarks in my previous report under this head requesting that the vote for binding books be increased. It is desirable that a more liberal appropriation for binding books be allowed. As I said before, it is not possible to preserve the books here in anything like a decent condition without at least double the present vote of Rs. 200 for binding. In a hot, damp climate, such as ours, bindings do not last long, and have to be renewed continually, more especially in the case of frequently consulted books.

The question of binding is a very important one in all libraries, and is now an urgent one in this Library. It is obvious that as the Library grows in size the expense for binding must grow in a still greater ratio. For some years now the sub-votes of the Department have had to be resorted to to meet the overdraws on the binding vote.

To bind the Catalogue of Books in the British Museum presented to the Library, our whole vote of Rs. 200 on "Binding Books" for the year will not suffice.

As desired by Government, our binding work is now solely done at the Government Printing Office. Evidently owing to the large amount of work done at that office there has been considerable delay in the returning of books sent to be bound: such delay has caused inconvenience.

BOOKS PRESS-MARKED.

The total number of volumes press-marked during the year was 367.

PAMPHLETS PUBLISHED IN CEYLON RECEIVED UNDER ORDINANCE NO. 1 OF 1885.

The pamphlets printed and published in Ceylon received here under Ordinance No. 1 of 1885 have been bound together according to size into volumes and put on the shelves and catalogued, but the volumes require indexing and paging, a work which has been undertaken this year, and which I hope to complete by next year.

ACCESSIONS.

The number of volumes added to the Museum Library was 611, consisting of 554 works. Among the more important additions were:—

General Books.

Fauna of British India, including Ceylon and Burmah. Arachnida. London, 1900.
Report of the British Association for the Advancement of Science, 1900.
Hooker's Flora of British India, 7 vols. London, 1875-97.
The Scientific Memoirs of Huxley, Vol. III. London, 1901.
Historia Numorum, by B. V. Head. Oxford, 1887.
The Jataka, together with Commentary, Vols. V. to VII., and Index Vol. London, 1891-97.
The Jataka, English Translation, Vols. I. to IV. Cambridge, 1895-1901.
History of Sanskrit Literature, by MacDonell. London, 1900.
Majjhima Nikaya, Part I., Vol. III. } Pali Text Society's Publications. London, 1899-1900.
Anguttara Nikaya, Parts IV. and V. }
Transactions of the Linnean Society of London (Zoology), New Series, Vols. I. to VII. 1879 to 1901.
Nederlandsch-Indisch Plakaatboek, 1602-1811, Zeventiende deel, 1900.
Expeditions organized by the British Astronomical Association to observe the Total Solar Eclipse of 1900. London, 1901.
Murray's New English Dictionary, Vol. IV., F and G. Oxford, 1901.
Philosophical Transactions of the Royal Society of London, Series B, Vol. 193, 1901.
Lalita Vistara, English Translation. Calcutta, 1881-86.

Books on Ceylon.

The following are the more important additions under this head during the year:—

Rajavaliya. Edited by B. Gunasekera, Mudaliyar. Colombo, 1899.
The Buried Cities of Ceylon. New edition. Colombo, 1899.
Australia, with notes by the way on Egypt, Ceylon, Bombay, and the Holy Land. By Dr. Jobson, 1862.
Proceedings of the Ceylon Legislative Council during the session 1890-91.
Maldivische Studien I., by W. Geiger. Munchen, 1901.
Pyrard's Voyages. Vols. I. and II. 3rd edition. Paris, 1619.
Die Graphitlagerstätten der Insel Ceylon. Munchen, 1900.
A Compendium of the Law of Prescription in Ceylon. By E. S. W. Senathi Raja. Colombo, 1901.
Hugh Boyd's Embassy to Kandy, with an account of his Life and Writings. German edition, 1802,
Do. do. do. English edition, 1800.
Beknopte beschryving der Oostindische etablissementen, verzeld van eenige brlagen, zeer dienstig voor lieden die zig in den dienst van de oostermaatschappr begeeven, uit egte berigten te zaamengesteh. By A. Huysers. Utrecht, 1789.
Notes on the Monetary System and Cinnamon Revenue of Ceylon; on the Prosperity of Ceylon as regards the Sinhalese; on the Prosperity of Ceylon as regards the English; Ceylon not suitable as a permanent residence for Europeans; on Col. Forbes' Pamphlet on the recent Rebellion in Ceylon, in a letter addressed to a Friend. By J. Steuart. Colombo, 1850.
Realia. Register op de Generale Resolutiën van het kasteel Batavia, 1632-1805, 3 vols. Leiden, 1882.
Letters addressed to the Editor, "Ceylon Times," on Service Tenures in Sabaragamuwa. By W. N. de A. Rajapakse. Colombo, 1881.
Views of Ceylon Court at the Paris Exhibition.
Creasy's Law Reports.

Entomologische Reisebriefe aus Ceylon. By Dr. W. Horn.
Coccinelliden aus Ceylon.
On Ceylon Rocks and Graphite. By A. K. Coomara Swamy.
Two Old Sinhalese Inscriptions: The Sahasa Malla Inscription, date 1200 A.D., and the Ruvanveli Dageba Inscription, date 1191 A.D. Text, Translation, and Notes. By T. W. Rhys Davids.

BOOKS ISSUED FOR READING AND REFERENCE.

The number of books issued to the readers from the shelves was 1,236. The books chiefly consulted were on Ceylon, Zoology (especially birds, snakes, and fishes), Buddhism, Dutch History, Law (Ceylon), Botany, Architecture, Anthropology, Mineralogy, and Darwinism, Encyclopædias, Dictionaries, &c.

ANCIENT MAPS OF CEYLON.

A very interesting collection of three ancient maps of Ceylon and forty-four plates relating to Ceylon, evidently extracted from Heydt's Travels, 1744, has been added to the Library, thereby enhancing the value of our collection. I give the following list of the titles of the drawings :—

1. A view from a window at Hulftsdorp, which lies a quarter of an hour's walk from Colombo, showing the courtyard of the building and Adam's Peak in the distance.
2. A view of Hulftsdorp, showing the appurtenances of the Mondour or Summerhouse.
3. A view of the hill of Calaner, a little more than a mile (Dutch) from Colombo.
4. A view of the Fort of Hangwella, 7 hours from Colombo.
5. Another view of the Fort of Hangwella.
6. Ground plan of the Fort of Negombo.
7. A view of the Fort of Negombo, 7 hours from Colombo.
8. Another ground plan of the Fort of Negombo.
9. A view of the Fort of Calture. 7 hours' distance from Colombo.
10. Ground plan of the Fort of Calture.
11. A view of the grounds attached to the Resthouse of Sitawaca.
12. Map of Ceylon.
13. Map of the District of Colombo.
14. A view of the Fort of Point de Galle as seen from the harbour.
15. A view of the so-called Death Mountain and Death Coast, beyond the resthouse of Attipetty in the Island of Ceylon, with its surroundings.
16. Another view of the Fort of Point de Galle as seen by one entering from the sea.
17. Still another view of the Fort of Point de Galle as seen from a part of the harbour.
18. A view of the Fort of Point de Galle, from the interior.
19. A landscape from the garden of the Rev. Mr. Marinus, outside the Fort of Galle, showing Adam's Peak and the so-called Haycock in the distance.
20. Ground plan of the Fort of Galle.
21. Another view of the Fort of Matura.
22. A view of the Fort of Matura.
23. General plan of the Fort of Matura.
24. A view of the Fort of Catuna.
25. Ground plan of the famous Fort of Catuna.
26. A view of the so-called Adam's Peak, together with the surrounding country and a correct representation of the various objects of curiosity belonging to it.
27. A view of the elevated ground surrounding Adam's Peak.
28. Writings, caricatures, and hieroglyphics seen on and around Adam's Peak.
29. On this plate is represented a room wherein a huge statue with minor statues and other objects are seen, together with fresco paintings on the wall illustrating the whole life of a native king.
30. A view of the castle of Jaffnapatam from the land side, showing the gate on the left.
31. A view of Fort Hamenhiel seen from a defile outside Jaffnapatam.
32. A view or representation of different elephants sketched from life.
33. A perspective view of the interior of the famous Dutch Church at Jaffnapatam.
34. A view of the interior of the castle of Jaffnapatam.
35. A view of the castle of Jaffnapatam seen from the sea, showing the gate, the Company's stable, and yard.
36. Ground plan of Fort Hamenhiel.
37. A perspective view of the exterior of the Dutch Church at Jaffnapatam.
38. Another view of the famous Adam's Peak seen from the resthouse of Kahawatta.
39. A view of the famous Adam's Peak, as seen from the resthouse of Kahawatta.
40. Another view of the Fort of Point de Galle showing the ships coming into the harbour.
41. Another view of the Fort of Colombo seen from the harbour.
42. A view of the Fort of Colombo and the chief offices as seen from the harbour.
43. A view of Hulftsdorp from another window looking towards the Mondour.
44. Coloured picture of Colombo Harbour and surroundings in 1656.

AN OLD DUTCH PICTURE OF CEYLON.*

I am indebted to Mr. R. G. Anthonisz, the Government Archivist, for some of the names of those figuring in the enlarged photograph of the Dutch picture in the Library, of the Grand Audience granted by the Dutch Governor to the Embassy from the King of Kandy at Colombo in 1772. The names are :—

Juan Willem Falck, Governor.
Bartholomeus Jacobus Raket, Chief Administrator.
Arnoldus Frankena, Lieutenant-Colonel.
Godfried Leonhard de Coste, Dessave.
Harmanus Jeronimus van Chef, Titular Senior Merchant.
Jan Hendrik Borwater, Fiscal.
Gerrit Engel Holst, Pay Bookhouder.
William Jacob van de Graaf, Secretary.
Cornelis de Cock, Chief Storekeeper.
Jacobus de Bordes, Trade Bookhouder.

* Afbeelding der plegtige Audientie verleent door Zyn Weledele, Grootagtbaare de Heer Gouverneur en Directeur van't Eyland Ceylon, etc., etc., aan't jaarlykse Gesándjchap van den Koning van Candia, te Colombo : in den Jaare, 1772.—G. A. J.

I had been trying for some time to locate the *venue* of the scene in the Dutch picture, and thought I had succeeded in doing so by the following extract I came across in Parliamentary Papers, 1851, Ceylon (correspondence relating to Wolfendahl Church, pages 72 and 73) :—

> The house close by Wolfendahl Church was a Government House, in which, in the Dutch time, the ambassadors of the King of Kandy were entertained. It was once also rest-house, afterwards the seminary, and the site where it stood is now the burial ground in connexion with St. Paul's Church.

I am indebted to His Excellency Sir Alexander Swettenham, K.C.M.G., Governor of British Guiana, for the following information :—

> The scene of the picture is, I believe, in the centre of the Fort Church, Colombo, which, prior to its dedication (1818–1824), was the Dutch Governor's house, in which all Council meetings took place.
>
> It was not customary—far from it—for the Governor and Council to go to the house where the Kandyan envoys were lodged. The envoys used to come to the Governor and Council for audience.
>
> Latterly, I believe, the envoys were lodged in the house presently used as an armoury by the volunteers in the Pettah ; formerly they lodged close to Wolfendahl Church. You will see in Valentyn that the old Government House was where the Fort Church is.

DONORS.

The Library is indebted to the following for additions to its collection :—

Mr. A. Chinniah, Veterinary Surgeon.
The Trustees of the British Museum.
The Trustees of the Indian Museum.
The British Association for the Advancement of Science.
The Ceylon Government.
Prince Albert I. of Monaco.
Mr. E. S. W. Senathi Raja.
Mr. W. N. de A. Rajepakse.
The Government Museum, Madras.
Mr. W. E. Davidson, C.C.S.
The Bureau of Education, Washington.
The Royal Society of London.
Mr. H. M. Gunesekera.

OLA MANUSCRIPTS.

123 manuscripts were consulted in the Library.

Sarartha Sangraha was frequently consulted by Buddhist priests and extracts from it taken. Another reader is gradually making a copy of the whole work.

Atthakatha on Sanyutta Nikaya of the Sutta Pitaka not being in the Library, steps have been taken to procure a copy of this work.

The following works have been acquired for the Library :—

Rasavahini Tika : Commentary on Rasavahini, a Historical Work.
Dalada Sirita : History of the Tooth-relic.
Mahasudarsana Sutta : One of Buddha's Sermons.
Sandakinduru Jatakaya : A Poetical Religious Work by Vilgammula Thera.
Satipatthanapadaenuma : Text of the Satipatthana Sutta, arranged word by word in order for paraphrasing.
Satipatthanasutra Sanne : An Interverbal Translation in Sinhalese of the Satipatthana Sutta.

The Archæological Commissioner is having a very old work, "Vinaya Tika," obtained by Mr. Parker in the North-Western Province, copied for the Library. The manuscript contains 241 olas (20 lines to each) closely written in antique Sinhalese character and needs special care in copying.

The collection of manuscripts having been found to want cleaning, an experienced man was engaged for the work. The entire collection was cleaned at a cost of Rs. 78·75. Many of the manuscripts were found to be damp and mildewed. The work of cleaning ola manuscripts and exposing them periodically to the air and applying resin oil to the leaves is as essential to their preservation as the wiping and dusting is to printed books.

I have to thank Chief Translator Mudaliyar Gunasekera for his kind help and assistance in reporting on ola manuscripts offered for purchase.

READERS.

Many visitors from all parts of the Island, who came down for the Royal visit celebrations, visited the Library and made use of it.

The number of readers (*i.e.*, of registered visits to the Library) was 1,035.

Seventy-five tickets were issued to readers, including renewals of old tickets and 37 new tickets.

It is particularly worthy of notice that among our visitors have been some scientific men who have consulted our collections and studied in the Library.

Besides our readers and others resident in Ceylon, the following visitors to the Island made use of the institution :—

J. Alexander, M.D.
Capt. Chester, U.S.S. Kentucky.
Rev. B. M. McDonell, N.S.W.
Rev. McIntyre, Sydney.
Capt. Alexander, R.N.
The Rajah of Ramnad.
General Olivier.
The Maharajah of Jhodpure.
H. H. Risley, I.C.S.
Dr. Taike.
The Maldivian Prince and suite.
S. C. Rudra,
Prof. A. Bastian.
Sir Edward Hudson Kinahan.
L. E. H Graham-Clarke.
M. A. Foley, Sydney.
R. Shelford, Curator, Sarawak Museum.

ACCOMMODATION.

Since 1893 I have been pointing out the necessity for more accommodation for the Library. Want of space has, since I assumed duties here, proved a serious hindrance to the development and extension of the Library. Every endeavour has been made to make the most of the limited space available. Books have even been arranged on the shelves according to size regardless of their scientific relationship, and much space thus economized by this means. Twenty-four years have elapsed since the Museum Library was founded. Additional room is now urgently required, and the necessity for the enlargement of the building (more especially in connection with the Library) has been strongly represented to Government by the Committee. The want of adequate room is a most pressing question, and is one which has to be seriously considered, if the Library is to be further developed. It is hoped that the question of providing room for the legitimate needs and expansion of the Library will engage the Government's early attention.

The Trustees of the British Museum have been kind enough to present this Library with the Catalogue of the Printed Books in the Library of the British Museum. It is a most valuable donation. The catalogue is sold at £84 nett. It contains 393 parts, each part averaging 300 columns. The printing of this catalogue was begun in 1881, and brought to a conclusion in 1900. This is by far the most important donation the Library has received for some time, but coming at a time when embarassments caused by limited accommodation are greater than they have ever been before, this generous gift adds to the necessity for more accommodation.

CATALOGUES.

The work of cataloguing has gone on steadily throughout the year :—

Part II.—Printed Books (Subject Catalogue): 48 pages of proof were finally passed.
Part I.—Catalogue of Pali, Sinhalese, and Sanskrit Manuscripts, compiled by the Assistant Librarian, was issued from the press.

Mr. F. D. Jayasinhe was engaged from 15th April up to 15th October in helping in cataloguing work.

It is anticipated that by the end of 1902 the Subject Catalogue, Part II., Printed Books, will be issued from the press. This catalogue has occupied a considerable part of the time of my assistant and myself. The catalogue ought to prove of benefit to all students who wish to avail themselves of our collection of books. Owing to the want of a catalogue, an alphabetical author's list was issued in September, 1894, and two subject catalogues—supplements of additions—were issued in June, 1896, and July, 1899.

The important work of a subject catalogue of the author's list issued in 1894 was commenced in 1898 and completed. Owing to other urgent demands on the Government Press, the printing of this catalogue was not taken in hand till 1901. The catalogue consists of 5,400 slips of main titles and cross references and contains all desirable information, and with its issue all the books in the Library and their subject-matter will be thoroughly indexed and made available to the public. Special attention has been given to Zoology and works on Ceylon. This catalogue will be a key to literature on special subjects at present hidden away in journals and periodicals. Owing to the absence of this subject catalogue it has been found most difficult to present readers with all the available literature in the Library on any particular subject.

CONCLUSION.

Inquiries on a great variety of subjects relating to Ceylon (specially History and Zoology) continue to be received. This affords gratifying testimony to the resources at the command of the Library for imparting information generally and more especially concerning the Island and its affairs.

The books and manuscripts are in good condition, every effort has been made to secure the best means for their preservation. It is needless to observe that vigilance and sustained effort are required to keep the books free from danger of destruction by rats and insects.

With the issue of the Catalogue of Pali, Sinhalese, and Sanskrit Manuscripts and Subject Catalogue, Part II., Printed Books, practically the whole Library will have been catalogued and indexed, excepting new acquisitions. Every possible means has been resorted to to make the Library of use to the public, and the catalogues (those issued and in the press) meet all requirements and render the books and their contents accessible to any one who wishes to utilize them. It is hoped that readers will show interest and sympathy in the work of the Library by making use of it.

As I said in a previous report, libraries of all public institutions flourish and serve the purposes for which they are created in proportion to the active sympathy and intelligent interest of those who support and use them. In this lies much of the secret of their potency for good.

GERARD A. JOSEPH,
Secretary and Librarian.

Colombo Museum, January 6, 1902.

COLOMBO HARBOUR WORKS.

REPORT OF THE RESIDENT ENGINEER FOR 1901.

MAINTENANCE.

South-West Breakwater.—The annual series of soundings and levels taken over this work showed that its condition was completely satisfactory. The quantity of rubble deposited on the sea side was 6,516 tons 17 cwt.

Bed of Harbour.—The periodical soundings showed that the depth was being well maintained.

Dredging.—The quantity of material removed by the "Sir John Coode" was 219,300 cubic yards, and by the "Triton" 101,474 cubic yards. The number of days worked by each vessel was 175 and 133.

Moorings.—Nine sets of moorings have been taken up and re-screwed to give additional length between buoys. Of the thirty-six sets of moorings provided for, the last is now being put down. Of these, all except three sets will have four screws. The latter will be completed as soon as additional screws are available, which will be in the course of the next few months. Four sets still remain to be taken up and put down in their new positions. An additional six sets have been sanctioned and indented for, making forty-two sets in all.

Inner Harbour Dredging.—The quantity dredged by the "Priestman" digger was 27,700 tons, of which 13,750 tons were sold for ballast, and the remainder deposited at the reclamation ground.

HARBOUR EXTENSION WORKS.

Blockyard.—The number of blocks made during 1901 was 2,963, as against 1,941 for 1900. Of these, 2,523 were large blocks, averaging 21 tons in weight, and 440 were Coal Depôt blocks, averaging 7½ tons. The quantity of material used in the construction of these blocks was as under:—

Broken metal	...	...	...	30,000 cubic yards
Sand	...	...	...	10,000 "
Cement	...	...	...	31,500 casks

Patent Slip.—It was hoped that the slip would be ready for use early in 1902, but progress has not been so rapid as was expected. After the end of March, when block-setting ceases on the North-West Breakwater and more divers are available, better progress will be made.

The Guide Jetty and temporary stage were completed early last year and all the concrete blocks set. The landward portion has been completed, with the exception of the engine-house. The lower portion is well in hand, and should be completed in April or May. There will then remain only the concrete ribs and rails connecting the land portion with the lower portion and the removal of the temporary staging. The cradle is now being put together.

Workshops.—The workshops have been kept so fully employed that overtime has had to be resorted to in several instances to enable us to cope with the large amount of work now necessary.

Reclamation.—During 1901 a considerable amount of reclamation was carried out at the new Coal Depôt. The area now reclaimed amounts to 12 acres, or one-half of the whole area. The concrete protecting wall was extended along the sea front for 900 feet, giving a total length of 1,100 feet at the end of the year.

Boat Repairing Basin.—No work was carried out on the boat basin during 1901, but it is hoped that a start will be made during the current year to complete this very necessary undertaking.

Mahara Quarry.—The quantity of rubble sent to Colombo from this quarry during the year was 87,625 tons 4 cwt.:—

	Tons	cwt.		Tons	cwt.
January ...	5,152	6	September...	8,821	10
February ...	4,221	5	October ...	9,480	5
March ...	5,099	6	November ...	8,671	1
April ...	3,722	10	December ...	8,809	19
May ...	6,379	6			
June ...	8,793	1	Total ...	87,625	4
July ...	9,432	12			
August ...	9,042	3			

This rubble was distributed over the works as under :—

	Tons cwt.
(1) Mounds, North-West Breakwater	14,712 17
(2) Concrete materials for North-West Breakwater, Coaling Depôt, Patent Slip, &c.	21,558 4
(3) Founds, Patent Slip	6,425 11
(4) Embankment, Coal Depôt	21,626 1
(5) Sundry work, Patent Slip	145 8
(6) Concrete materials for Graving Dock	16,691 19
(7) Sundry work	5,983 15
(8) Supplied to other Departments, &c.	481 9
Total ...	87,625 4

The convict labour employed during the year was 96,890, or a daily average of 311 :—

January ...	7,736	September ...	7,068
February ...	6,799½	October ...	8,716½
March ...	7,412	November ...	10,922½
April ...	7,410	December ...	11,510½
May ...	7,593½		
June ...	6,623	Total ...	96,890
July ...	7,526½		
August ...	7,572		

Free labour employed, working locomotives, cranes, &c., was a daily average of 15.

Mutwal Quarry.—There has been an excellent working face of stone in this quarry throughout the year. The stock of stone obtained last year, and mentioned in my report, was all used up in the construction of the North-West Breakwater and berms, and at the commencement of April, when the requirements of the Breakwater ceased for the season, the quarry was practically empty. From that date, however, most of the stone obtained was again stacked for the needs of the following working monsoon, and at the end of October about 18,000 to 20,000 tons of material were available, while at the end of the year there was an ample stock of stone in hand. In addition to supplying stone for the North-West Breakwater, material has been obtained from this quarry for the supply of about 300 hand stone breakers.

The output of rubble from Mutwal Quarry for the year was 63,157 tons 15 cwt. as under :—

	Tons cwt.		Tons cwt.
January	7,944 1	September... ...	3,207 18
February	8,860 3	October	3,588 10
March	8,564 19	November... ...	5,272 15
April	3,097 8	December... ...	8,647 17
May	3,965 6		
June	3,623 8	Total ...	63,157 15.
July	3,820 8		
August	2,565 2		

and was distributed as under :—

	Tons cwt.
(1) Mounds, North-West Breakwater	21,300 0
(2) Concrete material for blocks, North-West Breakwater, Coal Depôt, &c.	19,845 19
(3) Upkeep of South-West Breakwater	6,516 17
(4) Reclamation, pitching slopes	715 16
(5) Concrete material, Graving Dock	12,685 16
(6) Sundry work	1,953 3
(7) Ballast for dredgers	120 4
Total ...	63,157 15

The convict labour employed in the quarry was 91,299½, or a daily average of 293 :—

January ...	6,467½	September ...	9,034
February ...	6,511	October ...	8,006½
March ...	7,535	November ...	5,188
April ...	7,862	December ...	5,918
May ...	7,580½		
June ...	8,078	Total ...	91,299½
July ...	9,340½		
August ...	9,778½		

North-East Breakwater.—This work is entirely satisfactory, no alteration having taken place during the year. It has, however, been necessary to repair the staging erected along the Breakwater to maintain it in a condition suitable for running wagons.

North-West Breakwater.—Block-setting in the Breakwater was continued from the commencement of the year until the 30th March, when the stock of seasoned blocks in the blockyard was exhausted. The usual precautions were then taken against damage to the structure by the south-west monsoon, special blocks were built into the scar end of the works, tie rods were fixed, chains made fast, and the "Titan" road removed for 100 feet from the scar end of the work, in addition to which 300 tons of large plums were deposited around the toe of the Breakwater at the point where the block-setting ceased, and the "Titan" travelled back to the north-west head. Thus the work remained until the 2nd November, when block-setting was recommenced. The early part of the north-east monsoon was unusually rough, and the progress made in the Breakwater consequently retarded, as work was almost impossible during the afternoons, even up to the end of December. At the end of the year the construction of the Northern Arm had reached 1,275 lineal feet, or nearly half of its final length.

I am glad to be able to report that the stability of the structure is well maintained, no signs of uneven settlement being apparent.

Industry.—The "Industry" was engaged depositing rubble in the foundation berm of the Breakwater from 1st November until the end of the year.

GRAVING DOCK.

Cofferdam.—The cofferdam was completed on the 25th February, 1901, and the water inside pumped out by midday on the 27th. It has proved to be perfectly water-tight and satisfactory in every way.

Excavation.—Immediately the water was pumped out from within the dam, the temporary sump (for draining the trenches during excavation and building) was commenced and carried down to a depth of 70 feet 6 inches below low water ordinary spring tide by April. A short heading was then driven to connect the sump with the south trench.

The trench for the south-west return wall and the south dock wall was commenced on 6th May, and the one for the north-west return wall and north wall of the dock was begun in October.

During the year 13,662 cubic yards of cabook were excavated above low water ordinary spring tide, and 29,214 cubic yards of soft material and 1,045 cubic yards of rock have been excavated in timbered trenches, inclusive of the excavation for the heading and sump. The total amount of excavation up to the end of the year being 179,194 cubic yards.

Stone-dressing.—More than one-third of the whole amount of stone required for the dock has now been dressed.

The monthly daily average of the number of convicts at Mahara was varied from 80 to 17, while an average of 18 convicts has been employed in dressing "pitching" at Mutwal.

At Kochchikada there are 158 masons employed, the convict labour having been entirely dispensed with from the 8th June, up to which date there was an average of from 45 to 82 of free labour.

The output of stone for the year has been as follows :—

	Cubic Feet.		Cubic Feet.
Shoring courses ...	2,004¾	Quoins ...	1,288¼
Lower broad altars ...	3,100¾	Circular quoins ...	705½
Lower altars ...	11,413¾	Slide stones ...	653¼
Altar coping ...	2,697	Pipe groove quoins ...	271¼
Steps	1,470		
Keel block seatings ...	139½	Total ...	25,306¾
Broad altars ...	1,563¼		

	Square Yards.
Pitching	334

	Cubic Yards.
The moulded concrete facing blocks were all completed in August, containing...	1,414

	Cubic Feet.
The total of all dressed stone up to the 31st December, 1901, is ...	33,796¾

	Square Yards.
The total amount of pitching to same date is	567

Temporary Buildings.—The buildings for the concrete mixers have been completed and the machinery erected therein and satisfactorily tested. The cement store, foundations for the stone crusher, engine-house for the same, and portable engine and boilers for pumping were all erected by March.

Stone-breaking.—The stone crusher was erected in the same month and started in April, and has broken 7,651 cubic yards during the year. In addition to this, 10,770 cubic yards have been broken by hand, and up to date a total of 19,310 cubic yards has been done.

Machinery and Plant.—During the year the following plant has been received :—

Three 2½-ton cranes arrived in April.
Three do. June.
Four do. August.
Two do. September.
Light railway, 30 trollies and 50 narrow gauge side wagons.
Two concrete mixers.
One 16 H. & P. portable engine for concrete mixers.
One 10 do. circular saw.
One vertical frame saw.
One 9-in. pulsometer pump and boiler.
Twenty-five side-tip earth wagons.
The whole of the timber ordered for the trenches was delivered by July.

Free Labour.—The number of free labourers employed was 780 on the last day of December, 1901, whereas the daily average for the month of December, 1900, was 534.

Staff.—The health of the staff has been fairly satisfactory.

The expenditure for the year amounted to Rs. 3,225,808·27, as under :—

	Rs. c.	Rs. c.
Upkeep of South-West Breakwater, Inner Harbour, dredging, &c.	—	83,198 10
Harbour improvements, dredging, and moorings ...	227,861 98	
New works at Customs, &c.	418,994 28	
		646,856 26
Harbour Extension Works, Graving Dock	—	2,495,753 91
		3,225,808 27

The total expenditure on Harbour Extension Works, Graving Dock, &c., to 31st December, 1901, is—

	Rs. c.	Rs. c.
Harbour Extension Works, North-East and North-West Breakwaters, Reclamation, Coal Depôt, Patent Slip, and Barge Repairing Basin	5,663,639 22	
Stock of plant, stores, &c., at 31st December, 1901, for Harbour Extension Works, &c.	1,584,535 45	
Removal of workyard from Galle Buck to Reclamation, building block jetty, &c.	1,049,802 43

J. H. BOSTOCK,
Resident Engineer.

VETERINARY.

REPORT OF THE GOVERNMENT VETERINARY SURGEON FOR 1901.

I HAVE the honour to present my report for 1901.

CONTAGIOUS AND INFECTIOUS DISEASES OF CATTLE.

I.—*Rinderpest.*

During the early part of the year rinderpest prevailed in the Western and Sabaragamuwa Provinces. In the Northern Province a suspected outbreak occurred in the Jaffna District. There were 35 cases, 21 deaths, and 6 recoveries; the outbreak did not spread further. In February there was an outbreak amongst the cattle in the Racquet Court, Colombo. All the animals, 34 in number, were at once removed to the plague camp at Kanatta, where I inoculated them with glycerinated bile with the aid of the Stock Inspectors. Six of them died before ten days elapsed, the remainder were liberated after a fortnight's quarantine. The outbreak was confined to these cases. There was also an outbreak in a dairy in Colombo. All the cattle in the infected herd were taken out of Colombo, and out of 19 cases there were 10 deaths and 9 recoveries.

In April there was an extensive outbreak amongst the cart bulls at the Night Soil Depôt. The sick and suspected animals were sent to the Kanatta plague camp. A Stock Inspector was stationed on the premises, isolation huts were erected, and each pair of bulls segregated, instead of keeping them in the larger sheds all together, and inoculation carried out as far as possible. At the time I heard of the disease there had been about 40 cases, with 30 deaths, 2 were ill at the time, and 8 convalescent. After the suppressive measures were put into force, there were 6 deaths at the plague camp amongst the suspected animals isolated there, and with this loss the disease was checked.

By June the disease only existed in the Western Province and in Sabaragamuwa. In August there were only one or two doubtful cases on hand in Hewagam korale, Western Province, and by the latter end of August the disease had subsided altogether. From then until the end of the year —over four months—no cases were reported from any part of the Island.

Cattle Disease Committee.—In February a Committee was appointed by His Excellency the Governor to inquire into the prevalence of rinderpest in the Island and the more effectual means of its suppression. The members were, the Hon. Mr. W. H. Jackson (President); Hon. Mr. S. N. W. Hulugalla, Ratemahatmaya; A. S. Pagden, Esq., Mayor of Colombo; Don S. D. Bandaranayaka, Esq., Maha Mudaliyar; and myself.

After full inquiries had been made the following report was sent in to Government:—

> The Committee appointed to inquire as to the prevalence of cattle murrain in the Island and as to what measures can be taken for its more effectual suppression have the honour to submit their report:—
>
> (1) PREVALENCE OF CATTLE MURRAIN.
>
> From the reports of the various Government Agents and of the Colonial Veterinary Surgeon it appears that during the last two years the Island has been singularly free from cattle murrain. Small outbreaks have occurred in Colombo (several times), and in the Colombo, Kalutara, and Ratnapura Districts, but, as soon as they have been brought to the notice of the authorities, have been without difficulty controlled and in a short time stamped out.
>
> This freedom from murrain appears due, as far as the Western and Central portions of the Island are concerned, to greater vigilance in Colombo, the port of importation, and centre whence disease has in the past been frequently diffused; to more systematic and speedy reporting of outbreaks whenever they occur; to an increased veterinary staff, more frequently permitting a trained man to be sent without delay to the infected district and there direct the steps to be taken; and to the gradually, though slowly, increasing confidence on the part of the cattle owners in the method adopted by the Veterinary Department to arrest disease.
>
> To the total closing in 1898 of the ports in the Northern Province to imports from Southern India, and to restricted importations in 1899 and 1900 (measures taken in connection with plague precautions), the immunity experienced in the Northern, North-Western, North-Eastern, and North-Central portions of the Island must be attributed.

(2) MEASURES FOR MORE EFFECTUAL PREVENTION.

(a) Measures now adopted and available Means.

Previous to 1895, beyond a short pamphlet by the then Veterinary Surgeon, no record of any preventive steps, other than those the village headmen were supposed to take, has been brought to the notice of the Committee.

With 1896 a commencement was made in recording outbreaks, the various districts sending half-yearly returns to Colombo, while individual outbreaks were reported by letter to the Director of Public Instruction, under whom the Veterinary Surgeon then worked. This system, which entailed a report by the headman to Government Agent, thence through the Director of Public Instruction to the Veterinary Surgeon, took so long in reaching the hands of the latter that the outbreak was frequently weeks old before any steps could be taken by the Surgeon; nor could he, even if promptly informed, have effected much, as but one officer, Mr. Hoole, constituted his whole staff. By degrees staff and system have alike improved until there are to-day an Assistant Veterinary Surgeon (a graduate of the Bombay Veterinary College) and six Stock Inspectors, trained locally by the Government Veterinary Surgeon. This staff is distributed as follows:—

The Western Province: Government Veterinary Surgeon and two Stock Inspectors.
The Central Province: Mr. Hoole, Assistant Veterinary Surgeon.
The North-Central Province: Stock Inspector Dias.
The Northern Province: Stock Inspector T. Mahamooth.
The North-Western Province: Stock Inspector A. M. Fernando.
Province of Sabaragamuwa: Stock Inspector Wijanayeka.

Upon an outbreak occurring in any district the headman is ordered to report at once to the Government Agent, who directs the Stock Inspector attached to his Kachcheri to proceed to the spot, and at the same time telegraphs to the Colonial Veterinary Surgeon. The latter sends any special instructions that the circumstances of the particular outbreak may demand, and, if necessary, further assistance to the infected district. From the comparison of the systems in force in 1896 and 1901, it is apparent that during that period very great strides have been made in coping with outbreaks of disease.

The total mortality from all causes in 1900 is returned as 16,781, out of a total of 1,307,961 head of cattle, or 1·28 per cent.; while the average mortality for the three years 1865-1867, as given in the report of the Cattle Commission of 1869, amounted to no less than 59,381 head per annum from murrain alone.

(b) Proposed Measures.

1. In the first place, the existing laws and regulations should be enforced with much greater vigour and promptitude. While admitting that during the last five years there has been a considerable advance in this respect, the Committee are of opinion that outbreaks should be, in many cases, much more promptly reported than they are, and concealment of cases or neglect to isolate should in every instance be followed by the prosecution of the offender. For instance, during the last year, within the limits of Colombo, two outbreaks of murrain occurred, in one of which, after the suspected cattle had been separated, no trouble was taken by the owners to keep them separate, while in the other the disease was never reported by the owners and not discovered by the authorities until several days after the occurrence of the first case.

2. The Committee believe inoculation with glycerinated bile to be of great value as a preventive, and recommend power being given to the Government Agent, upon the advice of the Colonial Veterinary Surgeon, to make it compulsory within any infected area.

3. While recognizing the impossibility of insisting on improved grazing grounds or a better food supply for village cattle, the Committee believe that one measure quite practicable—compulsory castration—would tend greatly to improve the breed of cattle generally, and therefore to increase their power of resisting disease.

4. The gradual strengthening of the staff of the Government Veterinary Surgeon until it is able to deal promptly with any outbreak that may occur. At present, for instance, there is no member of the staff in the Uva, Southern,* or Eastern Provinces.

5. The insufficiency of pasture, the indifference to, or absence of any, food supply, and the overstocking of cattle have been repeatedly brought to the notice of Government and villagers alike, but no measures of compulsion can be recommended in the matter: it can only be hoped that in time the owners will come to realize their importance and pay more attention to them.

QUARANTINE.

Such facts as have been brought before the Committee tend to show that murrain is not endemic, but that cases reported as such are the lingering remnants of an outbreak originally traceable to infection by imported cattle. However this may be, the fact that murrain is in the large majority of cases imported is apparent, firstly, from the frequent outbreaks in Colombo, where large numbers of cattle are imported; and secondly, from the immunity experienced in the Northern (and consequently the North-Central and North-Western Provinces) by the prohibition or restriction of importation from ports of Southern India during the last three years.

It is clear therefore that quarantine, if practicable at reasonable expense, is highly desirable. Owing to the difficulty in obtaining food and water, especially the latter, in the northern districts of the Island, cattle quarantine on a large scale is not practicable. At the same time if quarantine is to be effective, it must be thorough. The Committee therefore recommend that all importation of cattle, except for local purposes, should be prohibited in the outports, and Colombo made the only port at which cattle from over sea can be landed. For local purposes but few cattle are imported into the outports, and this can be permitted

* Southern Province since provided for.

upon license obtained from the Government Agent of the Province into which it is proposed to import, after proper measures for quarantining have been arranged. Such importations are, as stated above, but small, and can easily be provided for.

It should further be borne in mind that with the frequent steamer service between Nagapatam, Paumben, and Colombo, the prohibition of importations into the ports of the Northern Province by sailing vessel will be attended with but little, if any, hardship to the cattle dealers, and with great benefit to the cattle themselves. This year, for instance, those landed at Kayts, while being marched down to the grazing grounds of the North-Central Province, died in large numbers from exhaustion and want of food all along the journey.

As regards Colombo, the average number of cattle imported weekly amounts to 340, or 57 per day. Of these, about 62 per cent. go to the Colombo slaughter-houses, leaving 183 per week, or 27 per diem, imported for purposes other than slaughter in Colombo.

It is proposed to march these imported cattle direct to the quarantine station, thence those for slaughter in Colombo will be removed as soon after purchase by the butchers as practicable to the slaughter-house, this leaving the comparatively small number of 183 per week to be dealt with for the full quarantine period.

The Colonial Veterinary Surgeon advises the Committee that the risk of infection from walking infected cattle from the port to the quarantine station is so small as to be negligible.

As shown above, the average number of cattle to be quarantined is, after deducting those sent for slaughter, 183 per week, the Committee think therefore that twenty sheds, each capable of holding thirty head of cattle, will prove ample for general purposes, while for isolation of suspected cattle four sheds of like capacity should be provided. For sick cattle no sheds need be provided; upon the occurrence of disease cadjan lean-tos for each head of cattle should be erected, which on the termination of the case would be destroyed by fire.

Constructing the sheds of iron frames with cadjan roofing the total cost should not exceed Rs. 30,000, while another Rs. 10,000 should be allowed for fencing and lines.

The cost of feeding cattle at the quarantine station should fall upon the importer, who should further pay a small fee per head for the accommodation afforded him, a fee which is now exacted by the owners of the Wolfendahl cattle stalls.

It is essential that as large a block of land as practicable should be given up for this purpose, in order to minimize the risk of the spread of infection, should disease break out in the station; for the same reason the sheds should be put up as far away from each other as possible. The isolation sheds should be separately fenced off.

Apart from the direct benefit which it is believed that effectual quarantining will confer, it seems almost beyond doubt that the cattle market will be established at the quarantine station; to this the Committee see no objection; while removal of the cattle from crowded stalls of Wolfendahl, whither they are now taken, and where they cannot but make the surroundings insanitary, will prove of great benefit to that quarter of the town.

A charge of 30 cents per head for all animals quarantined would realize nearly Rs. 3,000 per annum, and should suffice for all expenses for upkeep of the establishment. As regards buildings, the benefit to be conferred on the general community is so great that the Committee consider that it would not be inequitable to meet their cost from the General Revenue.

LEGISLATION.

The existing laws generally are sufficient for all ordinary purposes, but in the event of quarantine being established, an amendment of section 13 of Ordinance No. 9 of 1891, authorizing a general quarantine, and an enactment closing the outports of the Island to cattle importation, except for local purposes, will be necessary; while fresh provision of the law will be needed, if the suggestions of the Committee as to compulsory castration and inoculation are adopted.

II.—*Foot and Mouth Disease.*

During the year this disease has been general at one time or another pretty well all over the country. The losses have been very small, and probably over 90 per cent. have recovered. Any losses have been neglected cases and young sucking calves, which usually die when the mother is attacked, as a result of the milk becoming of an irritant nature.

Pamphlets dealing with the disease were printed in English and Sinhalese, and have been distributed in infected districts. The treatment advised has been very successful in the hands of the Stock Inspectors and private people. The leaflets can be sent free of charge to any one applying for them. With ordinary care the disease is easy to cure in most cases in this country.

STAFF.

During the year four new Stock Inspectors were appointed, three from 1st January and one from 1st June. At date the arrangement of the staff is as follows:—

Assistant Veterinary Surgeon.

Mr. E. T. Hoole, Kandy.

Stock Inspectors.

Western Province ...	...	P. C. J. Fernando. A. M. Ahamat (appointed in 1902).
Northern Province	...	T. Mahamooth.
Southern Province	...	E. W. Jayatileka.
North-Western Province	...	A. M. Fernando.
North-Central Province	...	D. L. Dias.
Sabaragamuwa ...	...	M. D. Wijanayeka.

The Eastern and Uva Provinces are not yet provided for.

Although a good many difficulties are met with in travelling and from the indifference and neglect of cattle owners and delays in reporting disease, which is only done after several deaths have occurred, and other animals attacked, the members of the staff have worked very successfully during the year. The majority of outbreaks were amongst large numbers of cattle, and the fact that diseases like rinderpest and hoof-and-mouth disease did not spread widely is sufficient proof of their attentive and energetic work. A *précis* of the report of each is annexed :—

Mr. E. T. Hoole, Assistant Veterinary Surgeon, Kandy.

Assumed charge of the Central Province in January. His first visit was to an outbreak of foot-and-mouth disease in Dikoya; the affected animals recovered, and the disease was checked. In February there was an extensive outbreak of hoof-and-mouth disease in the Nuwara Eliya District, 11 cattle had died out of 53 reported cases. After he went to the spot there was no further mortality, and several weeks later the disease stopped. The reason the disease was widespread in this instance was that it was carried by "tavalam" cattle.

There were also small outbreaks in the Kandy and Matale Districts, which were quickly suppressed, and a more extensive one in Tumpane, which lasted several weeks, due to the carelessness of the owners and to wild boars conveying the infection.

The Province has been free from any general outbreak of rinderpest during the year, and only one or two suspected cases amongst cart cattle were reported. Precautions were taken, and in no case did anything further result.

During his visits he met 337 cases of hoof-and-mouth disease, treated 320, with 318 recoveries and 2 deaths. He inspected 121 villages, and travelled 1,254 miles.

Mr. D. L. Dias, Anuradhapura.

There was no rinderpest during the year. The diseases were hoof-and-mouth disease, worm complaint especially amongst young buffaloes, ulcers, and wounds. Out of 1,404 cases of the above diseases brought to his notice, he treated 710, and all recovered; the remainder, 694, also recovered naturally or under native treatment. There were no losses from rinderpest during the year. He visited 407 villages, and travelled 2,232 miles.

Mr. A. M. Fernando, Kurunegala.

Visited outbreaks of rinderpest in the Western Province in the first half of the year, visiting ninety-six villages and inoculating 40 cattle which had been exposed to infection: 6 died before ten days elapsed, the remaining 34 remained healthy.

In April he was stationed at the Night Soil Depôt, Colombo, and remained on the premises day and night for eighteen days in consequence of the outbreak of rinderpest there amongst over 200 head of cattle. He carried out all imposed measures with great diligence, and was very successful in checking the disease, which is referred to earlier in the report.

In May he assumed duties as Stock Inspector, North-Western Province, stationed at Kurunegala, and has been busily employed treating cases of hoof-and-mouth disease. There has been no outbreak of rinderpest other than one case which occurred in the town, which he diagnosed as rinderpest on post-mortem examination. All precautionary measures were taken, and there was no other case. He has caused a segregation hut to be erected outside the town, and any case occurring in the town removed there at once. About 1,200 cases of hoof-and-mouth disease have been treated out of 2,365 cases met with, the balance not treated being mild cases not requiring anything more than cleanliness.

The galas in the town have been visited once a week, and a report made to the Local Board Inspector as to their condition.

Mr. T. Mahamooth, Jaffna.

1. *Cattle Disease.*—In January a suspected outbreak of murrain occurred in the Punakari district, which was satisfactorily suppressed. Out of 35 cases, there were 29 deaths, which occurred before the arrival of the Inspector on the spot, owing to late reports. In April an outbreak of hoof-and-mouth disease occurred at Elephant Pass: there were 31 cases, 8 deaths, and 25 recoveries under the Inspector's treatment.

2. *Horse-breeding Establishment.*—The greater part of the Inspector's work has been in connection with the horses on Delft and Iranativu. In February he accompanied me to the Islands and assisted in the work. In April and August he visited the Islands and administered medicines to the horses as a preventive against worm disease, and brought those for disposal to Jaffna. As illness usually appears during September and October, he was stationed on the Islands during those months to look after the horses, and only one died during the time he was there.

In September he visited Delft and removed a mare that was ill to Iranativu for better pasture, and took her foal to Jaffna to be hand reared. Two young foals were removed to Jaffna and successfully reared by hand on tinned milk, &c., which reflects great credit upon him, as it is not an easy thing to do under the adverse circumstances prevailing. During the year there were thirty-two foals born and nine deaths, eight brood mares died also from old age or accident. Ten young ones were removed from Iranativu to Jaffna for sale during the year, of which one had to be shot as the result of an accident.

Mr. M. D. S. A. Wijanayeka, Ratnapura.

During the first half of the year he was attached to the office in Colombo, and visited outbreaks of rinderpest in Colombo, Salpiti korale, Ratnapura, Kalutara, and Rayigam korale Districts. In May he took up duties as Stock Inspector, Province of Sabaragamuwa, stationed at Ratnapura, and he has been busily employed in connection with outbreaks of rinderpest and hoof-and-mouth disease since, especially in Kuruwiti korale. He also attended to outbreaks in Nawadun, Meda, and Kadawata korales, and in Three Korales of the Kegalla District. Under his notice during the year there were 282 cases of rinderpest, the majority of which were fatal. He inoculated 103 animals, which had been exposed to infection by being in close proximity to sick ones, of which five only died before protection was conferred.

Of hoof-and-mouth disease he met 498 cases, and treated 394 successfully; the remainder includes natural recoveries without treatment, those treated by vedaralas under his supervision as to isolation, &c., and deaths which were few, mostly sucking calves and neglected cases. He inspected 187 villages, and travelled 1,132 miles.

Mr. E. W. Jayatileka, Galle.

Appointed 1st January, and attached to the office in Colombo. During the first half of the year he visited outbreaks of rinderpest in the Colombo District, Siyane korale, Hewagam korale, and Ratnapura District. In Ratnapura District in one instance the sick animals were half wild, and could not be caught, and with the sanction of the Government Agent they were shot.

During May, June, and July he was largely employed in Hewagam korale in connection with an extensive outbreak of rinderpest. In latter half of the year he visited the Kalutara District several times in consequence of hoof-and-mouth disease.

Of Rinderpest, he met 142 cases, with 56 recoveries, 84 deaths, and he inoculated 37 cattle, of which all remained healthy.

Of Hoof-and-Mouth Disease, he met 59 cases, 57 recoveries and 2 deaths.

During the year he visited sixty-three villages, and travelled 985 miles.

At the end of the year it was arranged for Mr. Jayatileka to take up duties as Stock Inspector, Southern Province, stationed at Galle.

Mr. P. C. J. Fernando, Colombo.

Appointed 1st June, and was attached to the office in Colombo. He visited outbreaks of rinderpest and hoof-and-mouth disease in the Western Province in company with another Inspector, and made himself familiar with the various suppressive measures adopted in dealing with those diseases. He inoculated five cattle for rinderpest.

He was principally concerned with hoof-and-mouth disease, meeting 90 cases, treated 50, and all recovered. Of the balance, with native treatment under his supervision, 38 recovered and 2 died. He inspected fifteen villages, and travelled 122 miles.

IMPROVEMENT OF NATIVE CATTLE.

For stud purposes several young bulls bred at the Government Dairy were sold during the year to go into the Provinces :—

The Government Agent, Northern Province : Two for Delft.
Government Agent, Eastern Province : Two for the Province.
Assistant Government Agent, Kegalla : One for the district.
Assistant Government Agent, Nuwara Eliya : Two for the district.

The Kurunegala Dairy Company purchased a stud bull, and several Mudaliyars and estate owners purchased young bulls at the periodical sales.

The two bulls put on Iranativu a year or two ago were in excellent condition when I visited the Islands in February last, and the native owners were very pleased with them and grateful to the Government Agent for sending them. They had plenty of pasture and were very fat.

From several places I have received reports that the bulls sent have not done well at all, and I have in reply suggested simple measures for keeping and using them. Probably in most instances the failure and loss of condition is due to lack of interest and want of pasture and food, being simply turned with village cattle to live as best they can, which may do in some districts, but not in others. Perhaps the best way of using one is to put him in charge of a reliable man in a district for three months in order to get a fair number of cows served, then shift to another district, and so in time get round the Province. A bull must be kept in fair condition; if the pasture is not good enough, an allowance of food daily must be given.

The man in charge of the bull should refuse to allow old and decrepit cows to be served, and should use his influence with his neighbours to get them to send some of their cows to the bull: the offspring growing up amongst the ordinary cattle ought to exert an influence towards improvement.

The interest of the Government Agent on circuit in inquiring after and inspecting the cattle, with a word of encouragement to the owner of an improved and well-reared animal, will do much to command success.

PONY-BREEDING, DELFT AND IRANATIVU.

In February I visited the Islands and carried out the necessary work in connection with the ponies. All particulars with reference to the establishment will doubtless be found in the Government Agent's report for the year. The sickness which usually occurred in former years has been prevented to a great extent by the frequent visits of the Stock Inspector in the North and the periodical administration of vermifuge medicines.

HIS EXCELLENCY THE GOVERNOR'S BODYGUARD HORSES.

No very serious illness occurred amongst the horses during the year. Two horses were purchased, and one cast as unfit for further service, and one destroyed as the result of an accident.

The cases treated were cases of lameness, laminitis, colic, wounds, bursattee, and capped elbow.

GOVERNMENT DAIRY.

In July I took over charge of the Government Dairy from the Director of Public Instruction.

Disease amongst Stock.—No sickness of any consequence occurred during the year. In January a new batch of 22 cows came over from Southern India, and after a few days' quarantine hoof-and-mouth disease appeared amongst them. In all there were five cases: four recovered and one died (an English bull, which contracted the disease from the cows). With this loss the disease was stamped out. Two old and worn out cows died during the year, and two small calves—not a heavy mortality amongst some 200 head of cattle.

The heavy losses in former years amongst the young calves due to worm disease has been effectually prevented by the administration of worm medicines once or twice a month and by special attention being given to the feeding and general management. The grazing of outside cattle in the vicinity of the Dairy and on our grass lands was for some time a nuisance. It has been stopped by the police, and I am much obliged to Sergeant-Major Crispin for his special efforts.

Working of the Dairy.—The Dairy accounts show successful working during the year. The total expenses for the year were, roughly, Rs. 21,100, and the receipts by sale of young stock and milk, roughly, Rs. 27,500, giving a profit of Rs. 6,400 in round numbers. The exact figures will be seen in the several statements annexed.

The balance due to Government on the original votes of Rs. 31,039·12 in 1893 and 1894, amounting to Rs. 6,648·31, was paid off, leaving the stock and buildings valued at about Rs. 23,000 clear of debt. In addition, a credit balance in the Treasury of Rs. 7,399·33 and amount to be recovered on account of milk sold in November and December Rs. 3,179·95, making a total of Rs. 10,579·28 to the credit of the Dairy and Model Farm account at the close of the year.

Stock on hand on 1st January, 1901.

Cows	114
Stud bulls	5
Cart bulls	2
Calves	79
Total ...	200

On 31st December, 1901.

Cows	113
Stud bulls	4
Cart bulls	2
Calves	95
Total ...	214

Before leaving the subject, a word of thanks is due to the able Manager Mr. J. A. G. Rodrigo, who has been in charge of the Dairy since its start, for his energetic work in the interests of the Dairy, and his hearty co-operation during the year. The following statements are annexed :—

A.—Receipts and Expenditure, Government Dairy, 1901.
B.—Receipts and Expenditure, Model Farm, 1901.
C.—Financial Statement, Dairy and Model Farm, 1901.
D.—Capital Account, Government Dairy, 1901.
E.—Balance Sheet showing position of Dairy, 1901.
F.—Live Stock Return, Government Dairy, 1901.

MODEL FARM.

In July I took over from the Director of Public Instruction charge of the Model Farm along with the Government Dairy. Mr. P. Samaranayaka, who was for a long time connected with the late School of Agriculture, has been appointed Manager, and has carried out his duties in a very zealous and efficient manner.

I propose to build sheds and put cattle and sheep there, partly to relieve the Government Dairy of some dry cows and young stock and also to cross the native breeds, especially sheep, with imported breeds, with the object of getting a hardy and improved cross. Grazing ground is provided by the Ridgeway Golf Links, which form a part of the farm. Fruits and vegetables will also be planted.

The total expenditure for the year was Rs. 2,115·14, including rent paid to the Hon. the Government Agent Rs. 1,350, and the receipts Rs. 4,377, including rent of land leased out—rent of Golf Links, &c.—giving a profit of Rs. 2,261·86, of which Rs. 785 is estimated as the cost of building the sheds started in November. A statement of accounts for the year is annexed (*vide* B and C, Government Dairy Statements).

April 29, 1902.

G. W. STURGESS, M.R.C.V.S.,
Government Veterinary Surgeon.

Annexure.

A.—Receipts and Expenditure of the Dairy for the Year 1901.

RECEIPTS.		Rs.	c.	EXPENDITURE.		Rs.	c.
Amount realized by sale of milk in	January ...	2,385	59	Expended in the purchase of milk ...		4,334	49
Do.	February ...	1,831	71	Paid to Mr. Rodrigo as part salary ...		612	0
Do.	March ...	1,880	96	Paid to Mr. Kuruppu as part salary ...		45	0
Do.	April ...	1,900	3	Paid as rent of Havelock Racecourse ...		720	0
Do.	May ...	2,022	64	Paid as salary for Dairy coolies ...		1,684	0
Do.	June ...	2,118	27	Paid as salary for grass land coolies ...		1,782	0
Do.	July ...	2,213	93	Paid for transporting milk		143	0
Do.	August ...	2,235	38	Paid for purchasing grass		440	0
Do.	September ...	1,985	60	Paid in purchase of provisions ...		11,154	3
Do.	October ...	2,040	49	Paid in purchase of oil		61	76
Do.	November ...	1,950	52	Paid for licensing three carts ...		15	0
Do.	December ...	1,852	67	Paid in purchase of coir rope ...		18	75
				Paid for repairing Dairy utensils ...		3	0
				Paid for purchasing medicines, utensils, soap, arrack, &c.		85	76
				Nett profit		3,319	0
	Total ...	24,417	79		Total ...	24,417	79

B.—Receipts and Expenditure of Model Farm for 1901.

RECEIPTS.		Rs.	c.	EXPENDITURE.		Rs.	c.
Receipts of the Model Farm for 1901 ...		2,958	0	Salary of the Manager from July to December, 1901 ...		330	0
Rent of the Golf Club bungalow ...		80	0	Salary of the two watchers for the year ...		240	0
Rent of the old links		3	0	Cost of putting up a fence		118	29
Rent of the new links		300	0	Cost of putting up a cattle shed ...		785	0
Rent of the land leased out to Colombo Municipal Council		36	0	Rent of land paid to the Hon. the Treasurer		1,350	0
Rent of the land leased out to Messrs. W. H. Davies & Co.		1,000	0	Commission to Manager at 5 per cent. on collection for the second half-year, 1901 ...		76	15
				Cost of two check books of receipts ...		0	70
				Nett profit		1,476	86
	Total ...	4,377	0		Total ...	4,377	0

C.—Financial Statement of the Government Dairy and Model Farm for the Year 1901.

	Rs. c.		Rs. c.
Balance in bank on January 1, 1901 ...	12,652 30	Cost of transporting calves to outstations ...	83 86
Recoveries on account of 1900 credited in 1901	1,870 14	Cost of advertising the sale of cattle ...	33 75
Profits on the working of the Dairy Farm during 1901	3,319 0	Cost of extending and improving the Dairy buildings	1,500 0
Profits on the working of the Model Farm during 1901	1,476 86	Cost of building a liquid manure tank ...	540 0
Sale of live stock in 1901	3,016 82	Cost of making new milk cart ...	60 0
Interest allowed by bank	134 14	Cost of purchase of stock for the Dairy ...	2,779 53
Balance in bank to the credit of Superintendent, Dairy	69 28	Cost of 1 cwt. coir yarn	7 50
		Amount paid at 6 per cent. to Manager, Dairy Farm, on Rs. 3,319, being nett profits on the working of the Dairy Farm during 1901 ...	199 14
		Amount paid to Manager, Model Farm, at 5 per cent. on Rs. 1,523, being collection of the Model Farm for the half-year ending December 31, 1901	76 15
		Amount paid to Hon. the Treasurer in full payment of the vote	6,648 61
		Balance in bank to the credit of the Hon. the Treasurer	7,399 33
		Amount recoverable on account of 1901 during 1902	3,110 67
Total ...	22,538 54	Total ...	22,538 54

D.—Capital Account of the Government Dairy.

	Rs. c.		Rs. c.	Rs. c.
Amount expended from the sum of Rs. 22,980 voted for the establishment of the Dairy Farm in 1893	19,539 12	Amount paid into revenue as proceeds of sale of milk in 1893 ...	7,627 86	
		Do. in January, 1894 ...	1,262 65	8,890 51
Amount of special advances for the working of the Dairy Farm received in 1894 ...	11,500 0	Amount paid to Treasurer in part settlement of the advance on December 31, 1895 ...	5,237 35	
		Do. December 31, 1896	2,087 55	
		Do. December 31, 1897	4,175 10	11,500 0
		Amount paid on June 13, 1900, in part payment of the original vote	—	4,000 0
		Amount paid in 1901 in full payment of the original vote ...	—	6,648 61
Total ...	31,039 12	Total ...		31,039 12

E.—Balance Sheet showing the position of the Government Dairy at the end of 1901.

	Rs. c.		Rs. c.
Assets over liabilities ...	37,979 28	Amount paid as compensation to the late lessees of the Model Farm from the sum voted	4,400 0
		Estimated value of Dairy stock and utensils	23,000 0
		Balance at credit on December 31, 1901 :—	
		Hon. the Treasurer	7,399 33
		Superintendent, Government Dairy ...	69 28
		Amount recoverable during 1902 ...	3,110 67

GOVERNMENT PRINTING OFFICE.

REPORT OF THE ACTING GOVERNMENT PRINTER FOR THE YEAR 1901.

THE expenditure for which the Government Printer was responsible in 1901 was Rs. 215,496·95, an increase of Rs. 19,341·03 on that of 1900 :—

1900. Rs. c.		HEADS OF SERVICE.		1901. Rs. c.
35,778 21	...	Personal Emoluments	...	44,953 89
781 87	...	Exchange Compensation	...	684 94
35,180 17	...	Other Charges ... Contingencies	...	28,083 81
66,673 93	...	Other Charges ... Miscellaneous Services	...	63,006 74
42,077 53	...	Advances ... Printing	...	57,994 71
11,938 30	...	Advances ... Binding	...	15,613 48
3,725 91	...	Miscellaneous Services (Commissioner of Stamps)	...	5,159 38
196,155 92				215,496 95

Increased demands were responsible for increased expenditure, to meet which the Supplementary Supply Bill of the year included votes for Rs. 12,500, of which Rs. 6,000 was for paper.

In addition to the above, there was an expenditure by the Public Works Department of Rs. 314·48 on repairs to buildings.

Deducting recoveries on Revenue Account (Rs. 17,034·56) and repayments on Advance Account by independent public bodies and private parties (Rs. 7,783·11), the nett cost of the Establishment in 1901 was Rs. 190,679·28, as compared with Rs. 171,812·67 in 1900.

A Departmental classification gives the following results for the two years :—

Expenditure of 1900. Rs. c.				Expenditure of 1901. Rs. c.
167,514 44	...	I.—Book and Job Printing	...	181,623 6
912 32	...	II.—Railway Ticket Printing	...	1,083 28
6,474 40	...	III.—Stamp Printing	...	8,675 9
12,589 70	...	IV.—Binding	...	17,320 66
8,196 85	...	V.—Plant and Material	...	9,539 96
195,687 71				218,242 5

The difference between the total given under Heads of Service and that under this Departmental classification (which may be called the corrected expenditure) is due to the fact that the former includes only what has been paid for, while the latter takes into account the value of paper and materials actually used.

The nett increase on all branches in 1901 was Rs. 22,554·34.

I.—BOOK AND JOB PRINTING.

Book and Job Printing show an increased expenditure of Rs. 14,108·62, of which Bookwork is responsible for Rs. 5,468·41 and Jobwork for Rs. 8,640·21. In both branches there was a greatly increased outturn, that of Jobwork being exceptionally large.

In the following statement the cost of Bookwork and Jobwork, classified under Departmental sub-heads, is shown in comparison with 1900.

Taking the figures for both branches of work, the cost of composition, machine and warehouse work, ruling, and foundry work in 1901 (in other words, the total of workmen's wages and consumable stores) was Rs. 5,075·57, that of proof-reading Rs. 395·12, that of paper Rs. 7,431·25, and that of general charges Rs. 1,206·68 in excess of 1900.

The percentage which General Charges (Rs. 26,383·32) bears to Work Charges (Rs. 97,372·87) is 27·10 (Superintendence 19·26, Clerical Staff 4·20, Casual Expenses 2·62, and Leave 1·02), as compared with 31·01, 29·08, and 27·76 in the three previous years. Superintendence exhibits a decrease on 1900 of 1·55 per cent. and Casual Expenses of 0·14 per cent., while Clerical Staff and Leave both show slight increases.

The proportion of Reading to Composition is 33·29 per cent., compared with 33·25 in 1899 and 31·78 in 1900. This includes a share of the salaries of the superintending staff, by whom a considerable portion of the proof-reading in its later stages is done.

Of the amount paid for Composition, Rs. 18,432·77, or 56·07 per cent. of the whole and 65·94 per cent. of the Bookwork composition (as compared with 60 and 72 per cent. respectively in 1900), represents the earnings of the piecework hands.

The percentage which Superintendence (Rs. 18,746·83) bears to the total corrected expenditure of the year (Rs. 218,242·05) is 8·59, as compared with 10·26 in 1899 and 9·65 in 1900.

(1).—Bookwork.

There were 25,217 pages of Bookwork of different sizes printed in 1901, being an increase of 2,839 over 1900. The cost was Rs. 81,770·03, an increase of Rs. 5,468·41, of which Rs. 5,102·67 was in work charges (Rs. 3,107·36 for composition alone) and Rs. 365·74 for paper.

No. of Pages printed in 1900.	Cost. Rs. c.		Size of Page.	No. of Pages printed in 1901.	Cost. Rs. c.
14,200 ...	50,743 11	...	Foolscap folio and above...	17,058 ...	61,855 37

22,378	76,301 62	...	Total ...	25,217	81,770 3

Reducing the different sizes of pages to a common standard of foolscap folio, the increase over 1900 is 2,385 pages, the total (20,704 foolscap pages) forming a record which in all probability will stand for some years.

To the increase of 2,858 pages in foolscap folio the *Gazette* alone contributed 2,146, chiefly due to announcements under the Waste Lands Ordinances; of these, there were 211 preliminary notifications (each forming as a rule a four-page supplement and receiving six publications) and 289 final orders—together 500—illustrated by 666 plans engraved on type metal and perforated for the insertion of type lettering. In six years the *Gazette* (with which is included the *Hue and Cry*) has considerably more than doubled in size, rising from 4,804 pages in 1896 to 12,040 in 1901, while its cost in the same period has increased from Rs. 17,477·95 to Rs. 37,303·33. An issue of 100 pages was not long ago considered exceptional, but during the fourth quarter of last year the ordinary weekly publication (including the connected *Hue and Cry*) averaged 250 pages, the record number, that issued on September 6, running to 362 pages.

The Civil List for 1901 was published on March 23, the Blue Book for 1900 on September 12, but the volume of Administration Reports for 1900, though special efforts were made to secure its early issue, was, owing to the late receipt of but one or two reports only, not completed till December 30, 1901.

Of the Law Reports edited by the Solicitor-General, 280 pages were dealt with as against 350 in the previous year, seven monthly parts in addition to the digest of Volume IV. being issued, as compared with eleven parts in 1900.

The Public Instruction Department was supplied with 115,500 reading books and primers for schools, as compared with 102,750 in the previous year.

On September 28 the first of a monthly issue of the Ceylon Customs Returns was published, consisting of a royal octavo volume of 170 tabular pages, the production of which taxed the resources of the office to their utmost. The unavoidable delay connected with the preparation of the initial number (in the casting of special type, headings, &c.) having been overcome, no great difficulty is

now experienced in publishing each monthly part within ten working days of receipt of "copy"—the Returns made up to the end of October having appeared in print on November 29, those corrected to the end of November being issued on December 30, and the tabulated returns for the whole of last year being on sale at the Record Office on January 31, 1902. Five monthly parts were issued in 1901 at a cost of Rs. 1,908, or an average of Rs. 382 per part for printing.

Surprise and satisfaction have been freely expressed that such an excellent example of fine art printing could be produced in Ceylon as the Souvenir which was published to commemorate the Royal Visit to the Island in April last. His Majesty the King was graciously pleased to accept a copy, and in acknowledging it commanded that "an expression of his thanks, and of the great interest with which he had seen such an admirable specimen of the work of the Government Printing Press in Ceylon," should be conveyed to His Excellency the Governor.

Printing Examination Papers.—During 1901 eight examinations, embracing 72 distinct papers, were dealt with, the number of copies of each struck off varying from 25 to 200.

In addition to the ordinary periodical publications, such as the Blue Book, Administration Reports, Sessional Papers, Ordinances, Civil List, *Post Office Daily List, Gazette, Hue and Cry, New Law Reports, Monthly Customs Returns*, &c., the following were the principal items of more or less casual work completed during the year:—

Manuals for the Public Works, Irrigation, Medical, Public Instruction, and Census Departments.
The Institutes of the Laws of Ceylon, Vol. I.
Catalogue of the Colonial Medical Library.
Journal No. 51, Vol. XVI., 1900, of the Ceylon Branch of the Royal Asiatic Society.
Catalogue of Pali, Sinhalese, and Sanskrit Manuscripts in the Colombo Museum Library.
Annals of the Royal Botanic Gardens, Peradeniya, Parts I. and II.
Index of Registers of Deeds: Kandy District, Division B, Vols. I., II., and III.
Alphabetical Roll of the Prisoners of War in Ceylon.
Calendar of the Ceylon Medical College, 1901-1902.
Priced Vocabulary of the Government Stores.
Ummaga Jataka: Story of a Birth of Bodhisatwa.
Skeen's Guide to Colombo, fifth edition.
Souvenir of the Visit of Their Royal Highnesses the Duke and Duchess of Cornwall and York to Ceylon, in April, 1901.
Ceylon Post Office Guide for 1901.
A History of Ceylon (in Sinhalese).

The following were still in hand at the close of the year:—

A third edition of the Itinerary of Principal Roads in Ceylon.
A reprint of the Sinhalese translation of Part II. of the Mahawansa.
Mahasadda Niti, a Pali Grammar.
Book Catalogue, and a Catalogue of Moths, for the Colombo Museum.
Journal No. 52, Vol. XVII., 1901, of the Ceylon Branch of the Royal Asiatic Society.
A reprint of Vol. V. of the Supreme Court Circular.
Vol. IV. of the Addresses of the Governors of Ceylon to the Legislative Council.
Ceylon Post Office Guide for 1902.
Index of Registers of Deeds: Kandy District, Division C, Vols. I. and II.
Catalogue of the Library of the Royal Botanic Gardens, Peradeniya.
Working Book and Rules and Regulations for the Railway.
A History of England (in Sinhalese).
Alphabetical and Numerical Lists of Villages in the Western Province.
Report on the Ceylon Census of 1901.

The number of pages printed during the last six years and their cost are as follows:—

Year.	Pages of various Sizes.	Equivalent in Foolscap folio.	Cost. Rs. c.
1896 ...	13,007 ...	10,683 ...	49,630 2
1897 ...	15,030 ...	12,416 ...	53,887 6
1898 ...	16,508 ...	13,018 ...	60,167 65
1899 ...	17,603 ...	13,866 ...	63,630 34
1900 ...	22,378 ...	18,319 ...	76,301 62
1901 ...	25,217 ...	20,704 ...	81,770 3

(2).—JOBWORK.

The outturn of printed forms in 1901 was close on 36 million in number, being an increase of more than 7 million over 1900 and of nearly 9 million over 1899. The cost was Rs. 99,853·03. Paper is responsible for Rs. 7,065·51 more than in 1900, and work charges for an excess of Rs. 1,574·70, thus bringing the increased cost to Rs. 8,640·21.

The issues to the various Departments are given in Appendix II.

The Post and Telegraph Department holds the leading position as a consumer of printed forms, with 8¾ million valued at Rs. 27,250·54, as against 8¼ million valued at Rs. 27,762 in 1900. The Railway comes second with 8½ million valued at Rs. 20,581·39, and the Census Department third, with close on 5 million valued at Rs. 5,311·33. Of the two others whose demands ran into millions, the Medical Department comes first, with 2½ million valued at Rs. 9,385·03 (an increase both in number and value), and then the Registration Department with 1½ million valued at Rs. 12,275·06. The only other Department whose annual bill usually runs to Rs. 5,000 a year is the Public Works, which last year was supplied with nearly three-quarters of a million forms valued at Rs. 5,278·92.

The Judicial Departments (including Police, Prisons, and Fiscals) took 3¼ million forms valued at Rs. 17,359·46, as compared with 2¾ million valued at Rs. 17,119·63 in 1900.

In line-ruling nearly 3½ million forms, involving over 7½ million rulings, were ruled at a cost of Rs. 2,330·63, or 30·65 cents per 1,000 rulings, as compared with 27·68 cents per 1,000 in 1900.

The number of forms perforated was 2,625,625, an increase of over a quarter of a million on the previous year.

Cards, envelopes, and sheets of notepaper to the number of 10,307 were embossed in gold or colours with the royal arms, &c., for the use of His Excellency the Governor, while 40,166 cards, envelopes, and sheets of notepaper were black-bordered.

The following is a summary of most of the preceding figures :—

1900.			1901.
28,857,510	...	Aggregate number of forms issued	35,959,384
Rs. c.			Rs. c.
32,445 5	...	Printing charges	34,019·75
58,767 77	...	Value of paper	65,833 28
91,212 82	...	Total cost of printed forms	99,853 3
133,046 93	...	Value at Office Price List rates	135,351 4
41,834 11	...	Nominal profit	35,498 ·1

The cost of the following is included in the value of the Printed Forms :

3,207,232	...	Number of forms ruled	3,388,376
7,218,146	...	Number of rulings involved	7,605,224
Rs. 1,998·36	...	Cost	Rs. 2,330·63
27·68 cents	...	Average cost per 1,000 rulings	30·65 cents
2,341,148	...	Number of forms perforated	2,625,625
—	...	Cards, envelopes, and notepaper embossed ...	10,307
—	...	Notepaper and envelopes edged with black ...	40,166

The quantity, cost, and nominal value of the Jobwork of the last six years are as follows :—

Year.	Aggregate Issues.	Cost of Paper alone. Rs. c.	Total Cost. Rs. c.	Value at Office Rates. Rs. c.	Nominal Profit. Rs. c.
1896 ...	20,050,784 ...	45,081 49 ...	79,091 1 ...	110,789 57 ...	31,698 56
1897 ...	22,154,749 ...	56,829 94 ...	90,059 83 ...	105,216 67* ...	15,256 84
1898 ...	22,808,117 ...	50,927 74 ...	84,523 20 ...	109,273 71 ...	24,750 51
1899 ...	27,165,662 ...	53,649 71 ...	89,829 91 ...	128,197 93 ...	38,368 ·2
1900 ...	28,857,510 ...	58,767 77 ...	91,212 82 ...	133,046 93 ...	41,834 11
1901 ...	35,959,384 ...	65,833 28 ...	99,853 3 ...	135,351 4 ...	35,498 ·1

* Rates on the most widely used forms were considerably reduced in December, 1896.

During the year 81 new forms were added to the standard files and 22 forms were amended. The number of standard forms is now about 3,800. Of these, the majority are stereotyped, a considerable number electrotyped, while a comparatively few are kept "standing" in type.

The Machine Department record for the last six years (*i.e.*, for both Bookwork and Jobwork) is as follows :—

Year.	Number of "Formes" made ready.	Average Impressions taken of each.	Average Impressions taken Daily. At Machines.	At Presses.	Total.	Aggregate Number of Impressions taken during the Year. At Machines.	At Presses.	Total.
1896 ...	9,045	893	26,447	649	27,096	7,881,329	193,450	8,074,788
1897 ...	10,480	960	33,678	648	34,326	9,867,166	189,893	10,057,059
1898 ...	11,219	883	33,393	796	34,189	9,681,903	236,283	9,918,186
1899 ...	12,560	894	37,611	720	38,331	11,020,164	210,844	11,231,008
1900 ...	15,359	1,120	46,421	626	47,047	13,637,660	183,988	13,821,648
1901 ...	15,898	1,024	54,793	936	55,729	15,999,402	273,354	16,272,756

With the aid of nearly 19,000 hours of overtime in the Machine Department strenuous efforts were made to keep the work up to date, but it was not till the close of the year that the "arrears" list assumed anything like reasonable proportions.

II.—RAILWAY TICKET BRANCH.

Over 3½ million new railway passenger tickets were furnished to the Railway Department in 1901, while 872,809 previously-printed tickets were overprinted with fare or destination in the vernacular. The cost of a thousand impressions was 13⅜ cents, equal to 26¼ cents per 1,000 tickets (each ticket being printed front and back) : the cost is kept at a higher figure than it otherwise would be by the large number of tickets which are each year sent in to be "overprinted."

With the opening of the Northern Railway and the extension to the Kelani Valley, the larger demands made on the Office will necessitate the laying down of a fourth ticket-printing machine, as the plant in use is working up to its full capacity, and difficulty is at times experienced in promptly executing the orders of the Railway Department.

The following figures show the output and cost of railway tickets during the last six years :—

Year.	Tickets supplied.	Tickets overprinted.	Impressions involved.	Cost of Printing.* Rs. c.	Cost per 1,000 Tickets.
1896 ...	4,904,362 ...	103,350 ...	9,882,750 ...	1,065 41 ...	21½ cents
1897 ...	3,965,563 ...	613,843 ...	8,879,620 ...	974 29 ...	21 ,,
1898 ...	2,907,732 ...	163,800 ...	6,232,175 ...	768 69 ...	24½ ,,
1899 ...	3,175,754 ...	450,900 ...	6,988,056 ...	934 79 ...	26⅜ ,,
1900 ...	3,549,149 ...	502,133 ...	7,618,506 ...	912 32 ...	24 ,,
1901 ...	3,607,797 ...	872,809 ...	8,102,703 ...	1,083 28 ...	26¾ ,,

* The cardboard tickets are supplied by the Railway.

III.—STAMP-PRINTING BRANCH.

The following details of the stamped stationery supplied to the Commissioner of Stamps during 1901 exhibit increases of 644,974 in number supplied and Rs. 2,240·50 in cost, with an increase of Rs. 33,420·40 in face value :—

	Number supplied in 1901.	Bearing a Face Value of Rs. c.	Produced at a Cost of Rs. c.	Cost per 1,000. Rs. c.

Add—Service Post Cards ...	25,000	—	50 90	
Savings Bank Labels ...	105,000	—	43 50	
Grand Total for 1901 ...	4,084,595	142,865 42	8,675 9	

The supplies to the Stamp Office during the last six years have been as follows :—

Year.	No. of Items.	Face Value. Rs. c.	Cost. Rs. c.
1896 ...	2,576,295	179,737 58	6,181 6
1897 ...	3,425,288	114,620 41	7,934 18
1898 ...	3,405,099	131,912 68	6,596 94
1899 ...	3,067,463	141,842 24	6,111 18
1900 ...	3,309,621	109,445 2	6,340 19
1901 ...	3,954,595	142,865 42	8,580 69

In addition to the above, Currency Notes to the number of 17,600, bearing a face value of Rs. 36,380, were manufactured in the Stamp Department during the year, and supplied to the Commandant for the use of the Prisoners of War in the camps at Diyatalawa and Ragama. The notes, which are printed in colours and consecutively numbered, are of six denominations, 10 cents, 25 cents, 50 cents, Re. 1, Rs. 5, and Rs. 10.

The most noteworthy feature to be recorded in connection with the Stamp Department is the rapidly-increasing popularity of the 2-cent Post Card. In 1893 250,000 sufficed to meet all requirements, but, as will be seen above, no less than 1,584,475 were issued in 1901, the sales having increased more than six-fold in the nine years. The Ceylon Post Card is now one of the cheapest in the world, and undoubtedly the wide vogue it enjoys is greatly due to its being sold at the denominated value of the stamp, no charge being made for the material on which it is printed.

IV.—THE BINDERY.

The annually-increasing cost and outturn of this Branch continues. The expenditure for 1901 was Rs. 17,320·66, being Rs. 4,730·96 more than in the previous year, giving a profit (allowing for cost of work executed without charge) of Rs. 3,081·50. The following shows at a glance the expenditure and outturn of work for 1900 and 1901 :—

1900. Rs. c.	*Expended.*	1901. Rs. c.
7,883 65* ...	In labour ...	10,592 86*
4,706 5 ...	In materials ...	6,727 80
12,589 70		17,320 66
14,207 33 ...	Recoveries ...	16,772 47
1,846 70 ...	Work executed free of charge ...	3,629 69
16,054 3		20,402 16
3,464 33 ...	Profit ...	3,081 50

* Includes salaries paid under Personal Emoluments, 1900, Rs. 924; under Personal Emoluments and Permanent Staff, 1901, Rs. 1,374.

1900.	*Outturn of Work.*	1901.
3,245	Full Bound { Leather ...	3,216
2,141 ...	Full Bound { Dowlas or cloth ...	67
371	Half Bound { Cloth ...	498

140,451 ...	Other miscellaneous items ...	221,154
1,016,200 ...	Impressions at hand paging and numbering machines ...	1,296,721

Details for Departments are given in Appendix III.

The work consists chiefly of binding printed forms, mostly in a cheap manner, there being, with an occasional exception, no demand for elaborate work. The number of books bound (full,

half, stiff cover, and limp) was 29,116, a slight increase on the preceding year, the wire-stitched items showing an increase of 19,622. Envelopes are made by hand, obsolete printed forms being utilized where possible.

The following statement shows the progressive increase of work in the Bindery during the last six years :—

Year.	No. of Books.	Thread- or Wire-stitched Pamphlets.	Miscellaneous Items.	Expenditure. Rs. c.	Profit. Rs. c.
1896 ...	18,274 ...	100,758 ...	43,956 ...	7,837 2 ...	2,152 82
1897 ...	19,195 ...	140,888 ...	21,322 ...	9,828 37 ...	2,338 1
1898 ...	22,863 ...	144,510 ...	118,508 ...	11,887 92 ...	2,514 79
1899 ...	31,898 ...	138,555 ...	111,369 ...	13,165 44 ...	4,714 95
1900 ...	28,348 ...	158,237 ...	197,449 ...	12,589 70 ...	3,464 33
1901 ...	29,116 ...	177,859 ...	301,430 ...	17,320 66 ...	3,081 50

V.—THE FOUNDRY.

The Foundry expenditure was Rs. 3,003·97, an increase of Rs. 441·53 over 1900 :—

1900.		1901.	1900.		1901.
Rs. 1,057·54	Stereotyping	Rs. 1,073·96	Rs. 1,425·21	Labour	Rs. 2,163·21
Rs. 709·05	Type-casting, &c.	Rs. 1,041·40			
Rs. 439·43	Leads and Furniture	Rs. 461·03	Rs. 1,137·23	Materials	Rs. 840·76
Rs. 356·42	Engraving	Rs. 427·58			
Rs. 2,562·44		Rs. 3,003·97	Rs. 2,562·44		Rs. 3,003·97

Stereotyping.—The number of plates cast shows an increase of 445 and their weight an increase of 189 lb., the rate per pound working out at 29·92 cents as compared with 31·09 cents in 1900.

1900. No. of Plates cast.	Weight. lb.	Cost. Rs. c.		1901. No. of Plates cast.	Weight. lb.	Cost. Rs. c.
991 ...	1,112 ...	345 96 ...	Bookwork ...	1,015 ...	799 ...	241 20
1,203 ...	2,289 ...	711 58 ...	Jobwork ...	1,624 ...	2,791 ...	832 76
2,194	3,401	1,057 54*		2,639	3,590	1,073 96†

* Labour Rs. 492·96, materials Rs. 564·58 = 31·09c. per lb. † Labour Rs. 548·36, materials Rs. 525·60 = 29·92c. per lb.

Type-casting.—Excellent work was done in this branch in 1901, the outturn being far ahead of any previous year :—

Year.	Type Cast. lb.	Cost. Rs. c. Cents.	Value allowing for old Metal utilized. Rs. c. Cents.
1898 ...	671 ...	416 69 = 62·11 per lb. ...	431 24* = 64·27 per lb.
1900 *a* ...	1,256 ...	593 55 = 47·25 per lb. ...	703 72† = 56·02 per lb.
1901 ...	3,297 ...	1,041 40 = 31·59 per lb. ...	1,651 04‡ = 50·08 per lb.

* Gas Rs. 130·77, materials Rs. 158·86, labour Rs. 141·61.
† ,, Rs. 94·33, ,, Rs. 305·63, ,, Rs. 303·76.
‡ ,, Rs. 149·40, ,, Rs. 929·39, ,, Rs. 572·25.

Leads and Metal Furniture.—The outturn in 1901 shows an increase over that of 1900 : 3,407 lb., costing 13·53 cents per pound, as against 2,807 lb., costing 15·67 cents per pound :—

1900.	Cost.*	lb.		lb.	1901.	Cost.*
Labour ...	Rs. 208·76	84 ...	Thin (8 to pica) leads ...	24	Labour ...	Rs. 327·64
Materials ...	Rs. 230·67	1,673 ...	Thick (4 to pica) leads ...	1,799	Materials ...	Rs. 133·39
		362 ...	Long primer clumps ...	718		
	Rs. 439·43	688 ...	2, 3, and 4-m metal furniture	866		Rs. 461·03
= 15·67 cents per pound.		2,807		3,407	= 13·53 cents per pound.	

* Value of old metal not included.

Engraving.—Of the Rs. 427·58 expended, Rs. 325·50 (equal to 75 cents each) was for engraving on type metal 434 new plans attached to notifications published in the *Gazette* under the Waste Lands Ordinances.

The expenditure column of the following table shows how little the cost of the Foundry varies from year to year ;—

Year.	Foundry Expenditure.	Stereotyping.		Type-casting.		Leads and Metal Furniture.		Cost of Engraving.
		Weight of Plates cast.	Cost per lb.	Quantity cast.	Cost per lb.	Weight cast.	Cost per lb.	
	Rs. c.	lb.	Cents.	lb.	Cents.	lb.	Cents.	Rs. c.
1896 ...	2,572 1	3,244	21·20	1,702	47·40	2,696	12·22	55 20
1897 ...	2,813 25	2,897	25·77	1,850	47·47	4,396	11·53	102 84
1898 ...	2,434 41	2,486	33·53	671	64·27	2,768	16·53	75 66
1899 ...	2,039 54	2,759	32·36	— *a*	— *a*	2,701	16·47	246 20
1900 ...	2,562 44	3,401	31·09	1,256	56·02	2,807	15·67	356 42
1901 ...	3,003 97	3,590	29·92	3,297	50·08	3,407	13·53	427 58

a Type-casting Plant sent to England in 1899 to be over-hauled.

VI.—PLANT AND MATERIAL.

The outlay on Plant and Material (including the cost of repairs to machinery, which under the head of Casual Expenses has in Section I. been treated as a working expense) and the expenditure in the Foundry was Rs. 9,823·15, or Rs. 1,231·83 more than that of 1900, the greater portion of the amount being devoted to the purchase of much-needed English, Sinhalese, and Tamil type for the Bookwork Branch:—

1900. Rs. c.			1901. Rs. c.
1,172 74	...	Standing Plant and Machinery	2,707 30
6,159 18	...	Type	5,231 77
864 93	...	Brass Rule, Leads, and Metal Furniture ...	1,600 89
8,196 85			9,539 96
394 47	...	*Add*—Repairs to Machinery under "Casual Expenses"	283 19
8,591·32			9,823 15

Standing Plant and Machinery.—The expenditure was Rs. 2,707·30, mostly in small sums, the following being the only items needing mention: Schreier's automatic numerators, Rs. 400·94; a demy Albion printing press, Rs. 474; a mangle for use in the Foundry, to work the "Greyhound" flong, Rs. 296; letter boards, Rs. 171; stencil plates, Rs. 63; iron chases, Rs. 393·65; and glass floor slabs for letting light into the Machine Room, Rs. 232·10.

Steps were taken towards the close of the year to increase the Machine Room plant by placing an order with Messrs. Harrild & Sons, of London, for one of their latest model Double-royal "Bremner" letterpress printing machines, costing about Rs. 3,350. The press has been received, and is now (March 20) in course of erection, and when in running order it will (for some two months at least) be mainly engaged in striking off copies of the Report on the 1901 Census, the printing of which is now in hand.

Type.—Additions to bookwork founts are responsible for Rs. 3,196·67, jobbing type for Rs. 750, and type cast in the Foundry for Rs. 1,041·40.

Brass Rule, Leads, and Furniture.—Ordinary brass rule (imported) cost Rs. 538·27, head rules for the *Gazette* Rs. 34·32, leads and furniture cast in the Foundry Rs. 461·03, steel and patent furniture (imported) Rs. 448·53, and wooden furniture (imported) Rs. 111·13.

The expenditure on *Repairs to Machinery* (Rs. 283·19) was rather lower than usual. The loss of time and inconvenience to which we are periodically put when repairs to the steam engine are being carried out, or when the boiler is undergoing its half-yearly cleaning and over-hauling,—at which times nearly the whole of our machinery lies idle,—prove the necessity of having duplicate motive power to fall back upon, and the question of how this is to be provided should be settled at no very distant date.

Appendix IV. is a schedule of the principal plant and material in the Office on 31st December, 1901.

VII.—CASH RECOVERIES.

The contributions to Revenue in 1901, including the sales at the Government Record Office of publications supplied by this Office, were as follows:—

1900. Rs. c.			1901. Rs. c.
1,728 0	...	Subscriptions to and sales of *Gazette* ...	1,779 50
4,348 64	...	Unofficial advertisements in *Gazette* ...	4,081 59
2,252 0	...	Advertisements of Fiscals' sales	2,405 50
1,229 0	...	Subscriptions to *New Law Reports* ...	1,701 0
—	...	Sales of "Royal Visit Souvenir"	20 0
98 0	...	Sales of *Supreme Court Circular*	386 75
553 79	...	Sales of Sheet Almanacs, Stamp Vendors' Forms, &c.	700 65
100 50	...	Sales of Unserviceable Articles	98 31
119 53	...	Mulcts for absence without leave	122 29
512 0	...	Profit on Printing executed for payment ...	321 97
3,953 98	...	Profit on Binding*	2,071 47
—	...	Refunds	0 68
14,895 44		Sales at Record Office of books, ordinances, regula-	13,689 71
2,717 0	...	tions, &c., supplied by the Government Printer...	3,344 85
17,612 44			17,034 56

* For the actual profit of each year see Section IV.

The *Government Gazette* (of which 82 numbers were issued during the year) had on December 31 a circulation of 560 copies, 142 going to subscribers, the balance to Government officials, reading rooms, &c. The recoveries on account of subscriptions, sales, and advertisements amounted to Rs. 8,266·59, which being deducted from the total expenditure (shown as Rs. 37,303·33 in Appendix I.) reduces the nett cost to Rs. 29,036·74, as compared with Rs. 23,696·45 in 1900. Copies of the *Gazette* are sold to the public at the rate of 25 cents each, the yearly subscription, including postage, being Rs. 12; but the cost of production in 1901 works out to 81 cents per copy, and the annual subscription to Rs. 66·60; if postage be added (Rs. 9 for the year) the subscription rate would thereby be increased to Rs. 75·60.

The circulation of the New Law Reports at the close of the year stood at 182, the subscribers numbering 62.

The recoveries on account of printed forms supplied to paying Departments, and for work authorized to be executed for private individuals, &c., the cost of which is charged to "Advance" instead of to "Vote," amounted to Rs. 68,402·77, as against Rs. 50,157·06 in 1900, the Railway and the Census Departments being mainly responsible for the increase :—

On July 17 Mr. Skeen proceeded to England on privilege leave, Mr. Richards acting as Government Printer, in addition to his own duties, until my return to the Island on August 28.

Two retirements on pension have to be recorded for the year—Mr. A. P. Gunasekara, Compositor, on May 31, after 31 years' service, and Mr. T. S. Thambapillai, the Foreman of the Binding Department, on December 31, after 33 years' service.

Two additions were made to the Permanent Staff, Compositors J. S. Pillai and C. Fernando being appointed to Division A.

Excluding the extra hours worked by my Assistants, who receive commuted allowances, there were 57,715 hours of overtime work (as compared with 40,639 in 1900) registered during the year, viz., 22,019 in the Composing Department (including the Readers), 18,773 in the Machine and Press Department, 4,830 in the Warehouse, 105 among the Line-rulers, 446 in the Foundry, 10,359 in the Bindery, and 1,183 in the Counting House. Each hour's overtime is paid for at the rate of one-seventh of a day's pay.

The fines levied in 1901 amounted to Rs. 244·40, as against Rs. 212·94 in 1900; of this amount, Rs. 146·44 was on account of absences without leave and was credited to revenue, while Rs. 97·96 imposed for various offences was handed over to the Colombo Friend-in-Need Society.

The cash transactions of 1901 amounted to Rs. 341,955·34, as against Rs. 299,310·04 in 1900. The number of queries raised by the Auditor-General on the accounts of the Office was thirty-one, of which eleven only involved actual error, and that of a clerical nature.

The letters and memoranda addressed direct to the Government Printer in the course of the year numbered 8,576, while 3,776 were despatched by him, in addition to 8,872 advice notes. As the latter are returned receipted, the total number of documents dealt with outwards and inwards, exclusive of receipts for payments (2,374) and papers constantly passing to and from the Secretariat, amounted to 30,096, as against 28,276 in 1900.

The weight of printing paper, cardboard, &c., used during the twelve months was 181½ tons, as against 170½ tons in 1900. Of this, 995 packages, weighing 20½ tons, were sent to their destination through the agency of the Government Stores, and 5,693 parcels, weighing 13½ tons, were distributed by the Post Office, the balance of 147½ tons having been delivered by cart or cooly to Departments in Colombo.

Of the paper used in all branches of work in 1901, costing Rs. 87,075·63, local contractors supplied to the extent of Rs. 49,980·04, the value of Indian makes of this being Rs. 21,732·33.

886 orders for advertisements (as against 852 in 1900) were sent to the local newspapers through the medium of the Government Printer; of these, 394 (as against 357 in 1900) were for notices under the Waste Lands Ordinances.

"Service" postage stamps were used to the value of Rs. 7,851·41, against Rs. 5,781·01 in 1900.

Provident Fund.

Membership of the Provident Fund (managed by a committee elected by the subscribers) is compulsory on all daily paid and piecework employés. It provides for loans, with and without interest, in cases of sickness and distress, and for gratuities (1) to men retiring on account of ill-health or old age, and (2) to widows and families on the death of members, such gratuities being met by special calls. The contributions recovered from the 242 members on the roll during the Fund's financial year 1900–1901, which closed on June 30, amounted to Rs. 2,248·25. Loans to the extent of Rs. 5,385·25 were granted during the year, and subscriptions amounting to Rs. 1,097·01 were refunded to those who had left the Office, while two death gratuities (Rs. 100 and Rs. 50) and three retiring allowances (Rs. 100 each) were paid. The working expenses amounted to Rs. 120. A dividend of 8 per cent. was declared, absorbing Rs. 961·90 out of a profit of Rs. 965·76. The amount standing to the credit of members on June 30, 1901, was Rs. 12,985·61; on 31st December last this had risen to Rs. 14,229·11.

The following tabulated statement shows at a glance the remarkable growth made in all branches of the Office during the past decade :—

	Employés.	Expenditure.	Pages Printed.	Size of *Gazette*.	Forms Printed.	Books Bound.
1891 ...	184	... Rs. 128,418 ...	13,416	... 4,080 pages	... 16,660,122 ...	75,024
1901 ...	275	... Rs. 215,496 ...	25,217	... 12,040 pages	... 35,959,384 ...	206,975

* Includes wire-stitching *Gazettes*, making envelopes, mounting forms in blocks, simple stitching, pasting, cloth-lining, mounting on strawboards, &c.

† Includes work for Secretariat and Record Office Rs. 1,379·78, on *Gazettes* Rs. 708·20, Law Reports, Royal Botanic Gardens Circulars, &c.

APPENDIX IV.

Schedule of the Principal Plant and Material in the Office on 31st December, 1901.

For Ordinary Letterpress Printing.

59,000 lb. English Bookwork type (long primer, bourgeois, and brevier chiefly).
11,000 lb. Sinhalese and Tamil type.
5,500 lb. titling and jobbing type (175 founts).
34 founts of wooden type for posters.
30,000 lb. metal furniture.
2 founts steel furniture.
2 "Wetter" automatic numbering machines (1891).
24 "Schreier" do. (1898 to 1901).
64 compositors' frames.
1,040 compositors' cases.
567 galleys.
8 skeleton galley racks.
2 steel-run cabinets with 40 cases (1899 and 1901).
1 letter board cabinet (1899).
11 imposing surfaces.
40 forme racks.
1 surplus type rack (1,746 compartments).
5 rule and lead cutters.
1,300 chases.
1 cylinder galley proof-press (1881).
13,840 in. Lavater's locking up apparatus.

two-feeder printing machines:
1 "Bremner" quad-crown (1896).
1 "Conisbee" double royal (1870).

single-feeder printing machines:
1 "Bremner" double-royal (1888)
2 "Bremner" double-crown (1885)
2 "Conisbee" double-crown (1876)
2 royal "Fleet" (1897 and 1899)
1 demy "Fleet" (1892)
2 foolscap "Fleet" (1897 and 1899)
1 half-medium Colt's platten (1893)
1 "Gordon" platten (1899)

6 "Albion" hand printing presses.
5 hand line-ruling machines.
1 power ditto (1898).
1 "Eclipse" power rotary perforator (1894).
1 treadle perforator (1874).
1 42-in. "Diamond" guillotine (1896).
1 26-in. Gill's roller (1896).
1 paper waggon.
1 roller composition melting kettle.
15 roller moulds.

Railway Ticket Branch.

3 Waterlow's ticket printing machines (1868, 1879, and 1892).
About 1,500 electro logotypes.
Automatic counting machine (1897).

Copperplate press (13 in.) (1897).

Embossing and relief stamping press (1897).

Stamp Branch.

1 half-medium Colt's Armoury platten machine (1895).
1 half-royal ditto (1898).
1 Friedheim's power rotary card cutter (1896).
1 power letter card, &c., perforator (1896).
2 "Albion" hand printing presses.
1 23-in. hand guillotine (1899).
1 drying rack.

Bindery.

1 gilding and arming press (1890).
1 32-in. "Diamond" guillotine (1885).
1 backing machine (1898).
1 finishing press (1889).
1 book-stabbing machine.
1 bevelling machine (1899).
1 cornering machine (1899).
3 nipping presses.
1 "Atlas" press (1899).
2 cardboard cutters.
1 power wire-stitching machine (1895).
3 treadle numbering or paging machines.
1 eyeletting machine (1891).
2 finishing and heating stoves (gas).
Marbling apparatus.
Graining plates and boards.
Brass type, ornaments, rolls, fillets, &c., about 50 varieties.

Foundry: for Electrotyping (1895).

1 electro-depositing dynamo.
1 hydraulic moulding press, moulding pans, &c.
1 blackleading trough.
1 syringe bath.
1 solution trough.
1 furnace with backing frames.
1 face lathe.
1 wax melting pot.

—— for Stereotyping.

1 combined melting furnace, hot air chamber, and press (1882).
1 Royle's router (1895).
1 casting box with type-high cores, &c. (1876).
1 combined beating surface and saw bench (1876).
1 imposing surface.
1 bevelling plane.
1 steam saw.
1 mangle for "Greyhound" flong.

—— for Type, Lead, and Furniture-casting.

1 Titchener's small work type-caster (1890).
Long primer, bourgeois, and brevier matrices and moulds, gauges, &c.
Furniture and lead moulds.

A portable forge with supply of fitter's implements for small repairs.

A steam saw for cutting firewood, &c.

Motive Power supplied by

12 H.P. Tangyes' horizontal steam engine (1892).
16 H.P. Cornish boiler working at 60 lb. pressure (1892).
3½ H.P. Crossley's "Otto" gas engine (1896).

A Lift communicates between the Composing and Machine Departments.

APPENDIX V.

Statement showing the Expenditure on the Government Printing Office, Ceylon, and the Outturn of each Branch, for each of the Years 1869 to 1901.
